

FISHER SCIENTIFIC CO

Catalog 77

4126 new items added.

MORE quick-reference charts to compare products.

COMPLETE chemical catalog included.

NEW manufacturers' number index.

NEW catalog number index.

COMPLETE general index page 1610.

apparatus and supplies for industrial, clinical, college and government laboratories

Three Indexes

This new catalog presents our laboratory apparatus line in easy to use alphabetical sequence. However, for your maximum convenience, we've included three separate indexes:

- (1) Main alphabetical index:** beginning on page 1610. The quickest, easiest way to find what you want.
- (2) Fisher catalog number index:** pink pages.
- (3) Manufacturer's catalog number index:** yellow pages.

Companion Catalog — Science Teaching Apparatus

Another comprehensive Fisher catalog — Catalog 77 EMD — presents 1200 pages of apparatus and supplies for instruction in biology, chemistry, physics and a dozen other sciences in high schools and junior colleges. Ask your Fisher branch for the Educational Materials Division **Catalog 77 EMD**.

Chemicals

Pages 1248 to 1569 present our line of Fisher reagent chemicals, available from the same branches who supply you with instruments, apparatus, supplies, and furniture.

A complete separate chemical catalog of all reagent chemicals, **Chemical Index 77-C**, is available on request. It includes all diagnostic and other reagents listed throughout this catalog.

Toward Metrification

In keeping with the national trend toward metrification, this catalog presents all dimensions, weights, volumes, and other measurements in metric units or both metric and English units.

To help you "think metric", we have included a master English/metric conversion table for the most common units of capacity and length. Also, a Celsius/Fahrenheit temperature conversion table. Both are at the end of the blue pages.

How to order

Phone numbers, terms, abbreviations, etc. are explained on pages 1599 to 1609.

In AA (atomic absorption) **technology**, Fisher Scientific/Jarrell-Ash Division leads the field.

Superior analytical performance

The revolutionary Model 8AA Spectrophotometer shown below features complete micro-processor control via keyboard commands. Assures precise uniformity and reproducibility. Its integrated computer automatically handles the mathematics, providing 6-digit accuracy for analytical functions, data averaging, automatic zeroing, curve corrections. (Far more precise than the 0.1% accuracy limitation of electronic analog de-

vices used by competitive instruments.) And measurement accuracy is bolstered by the traditional excellence of the Jarrell-Ash double-beam optical system with high-resolution monochromator.

No more drift

Digital memory avoids electronic drift of stored computational functions as analysis proceeds. The double-beam system obviates

baseline drift and instability caused by hollow cathode warm-up.

Set-up time CUT by factor of 10

Keyboard control lets you set operating parameters in 2 to 3 minutes, a totally effortless operation with the automatic programming accessory. Just insert a pre-punched tape and press one button. Operating parameters are exactly reproducible, independent of operator skill.

(Contd. next page)

Three revolutionary AA instruments from Fisher/Jarrell-Ash:

Complete details and ordering information, pages 1059-1066.

The computer-controlled Model 850 . . . a whole new dimension in AA

Pushbutton simplicity teamed with digital computer accuracy. Truly computer-controlled — not just calculator-implemented. Keyboard-entered commands select wavelength setting, slit size, lamp current, analytical mode, averaging period, readout mode. Computer automatically calculates and stores digital values for zeroing, conversion to absorbance or concentration, signal averaging, curve correction.

Computer flexibility is part of Model 850's planned ability to take technological advances in stride. Obsolescence is a worry of the past. Gains in accuracy brought about by future advances in atomizer technology will still be within the scope of the Model 850's computer.

Degree of automation can be increased as desired with optional accessories that introduce:

- (1) programming by pre-punched strips;
- (2) background correction using deuterium light source;
- (3) fail-safe flame control via keyboard commands;
- (4) printout of displayed data.

Atomic Absorption Methods Manual

that can be used by all types of labs regardless of AA system or level of experience.

See page 1066 for ordering information.

World's most complete stock of

Hollow Cathode Lamps.

See pages 1067-1068.
(Contd. next page)

Dial-Atom III

Research grade performance at low cost

Pushbutton controls for fast set-up and simple operation. Sensitivity and detection limit performance equal to higher priced instruments for many metals. LED digital display system. Automatic zeroing, even in flame emission mode. Data averaging. Curvature correction for high signal levels in concentration mode. Pushbutton igniter. Fully regulated power supplies. Internal crystal oscillator controls timing and digital functions independently of line frequency. Connection for printer. Selection of recorder readouts: special "bar-graph" display for easiest readability, standard analog readout, high speed readout for accurate tracings in flameless AA.

Model 810

Ultimate choice for versatility and performance in background correction mode of operation

Provides the researcher new levels of analytical precision. Unique dual-channel, double-beam system allows sequential analysis of two metals in same sample. You can use both channels for AA, or one for AA and the other for flame emission. You can use one channel for monitoring an internal standard or background absorption, while the other is used for analyses. Direct digital concentration readout. Automatic zero setting. Data averaging. Curvature correction. Scale expansion to 25X. Pushbutton flame ignition.

Fisher Scientific Company

Air Pollution Monitoring Devices

Recording Tape Sampler

Monitors air particulates
40 μ m and smaller

Complies with ASTM D1704

For studying concentrations of particulate matter deposited on filter tape. Unit is divided into tape deck area and control center with external strip-chart recorder.

Sampler uses oil-less pump to channel air samples at 7.1 liters/min to filter tape with sample spots 5cm apart. Particles are deposited on 2.5cm dia sample spot.

Each spot is monitored for light transmission by light source stabilized by transformer. Transmitted light from spot is received by photovoltaic cell which produces electrical signal. Signal appears as continuous record of transmittance versus time on strip-chart recorder. At chart speed of 2.5cm/hr, recorder permits up to 30 days of unattended operation.

Sampling time for each spot can be varied from 5-240 min. Most sampling for each spot is done for 2 hr. At the end of each sampling period, tape advances automatically 5cm to next spot.

Ordering Information

Tape Sampler. Housed in heavy-gauge aluminum enclosure with bronze-tinted acrylic doors and tumbler lock. Sampler 38Lx28Wx31cmH. Recorder 10Lx13Wx15cmH. With 1 rl of 1-037-20 filter tape, 1 rl of recorder chart paper. Shipping wt 22.7kg (50 lb); net wt 16.8 kg. 120V 60Hz.

1-037-101390.00
(Precision 63094)

Pre-Punched Filter Tape. Sampling tape with 2.5cm test spots. Centered 5cm apart. Tape duration of 20 days on 2-hr sampling cycle, 40 days on 4-hr cycle. 12.2mLx3.8cmW.

1-037-20Box of 6rl/32.00

High-Volume Air Filter Sampler

Indoor and outdoor models

ASTM D2009 conformance

Traps particulate matter for testing. Sampler consists of high-capacity blower with series motor mounted below funnel-type filter holder. Suitable for indoor testing with floor stand or outdoor testing shelter.

Air is pumped through filter by twin-turbo blower up to 38 liters/sec. Particulate matter is collected on 25.4Lx20.3cmW glass fiber filter. Filter is removed, studied for mass, chemical properties, size, and distribution of particles.

Stainless-steel structure with pressure gauge. Sampler with holder: 41Hx28cm dia. 120V 60 Hz. Without filters.

Ordering Information

Sampler with outdoor aluminum shelter. 41Lx43Wx127cmH. Shipping wt 15.9kg (35 lb); net wt 11.3kg.

1-037-40480.00
(Precision 63083)

Sampler with indoor stainless-steel floor stand. 33Lx38Wx48cmH. Shipping wt 6.8kg (15 lb); net wt 4.5kg.

1-037-45400.00
(Precision 63084)

Glass Fiber Filters. 25.4Lx20.3cmW. Box of 100 sheets.

1-037-48Box/32.00

Sulfation Plate Holder

Inexpensive method for atmospheric SO₂ sampling

For sampling sulfur dioxide concentration in atmosphere by using plate smeared with lead peroxide paste. Paste reacts with SO₂ in air to form lead sulfide. Sulfide is analyzed to determine SO₂ content. Aluminum holder with mounting slots and clips. Without paste.

1-037-605.50
(Precision 63075)

Gelman Spectro-Grade Filters

For air pollution monitoring

Use with high volume sample collectors. Collect samples at 2m³/min for 7 days. Temperature range, -50°C to +49°C.

Unlike other glass fiber filters, Spectro-Grade filters absorb negligible amounts of SO₂ from atmosphere.

High purity insures low, uniform trace element background. Collected metal-containing particulates will not be masked by elevated background counts.

Minimum of 99.95% retention for particles of 0.3μm. For continuous use at temperatures up to 93°C. High tensile strength. Tear-resistant. Can be folded for complete recovery of retained particles. (Gelman 64876-81)

In 8x10" (20x25cm) Sheets. Pre-numbered sheets for statistical analysis of air pollution studies. Packed in boxes with special coating to prevent contamination. Trace contaminant assay in each box.

9-730-195FPk of 100/48.00
(Gelman 64948)

Air Culture Sampler

Monitors bacterial level in hospitals, plants

Two-stage pre-sterilized sampler uses two 100x15mm disposable plastic Petri dishes, sandwiched between 2 perforated platforms. Collects airborne bacteria and fungi. Useful in hospital/nursing home applications, industrial operations, sanitary public health inspections.

Place Petri dishes with 20ml of general purpose medium in sampler. Connect to vacuum source which draws more than 20cm of Hg at atmospheric pressure. Sampler pulls in 28.3 liters of air per min. Continue sampling for 5 to 60 min. Remove dishes . . . incubate for 24 hours at 35°C . . . count colonies. Use table (supplied with sampler) to determine if count is in normal or acceptable levels, according to sampling time and location.

Ordering Information: Without tubing, vacuum source, and Petri dishes. Complete unit is disposable.

Sprayer

Accommodates many types of liquids

. . . disinfectants, paints, rust inhibitors, cutting oils, any thin-able liquid. Three-piece unit: Jar, aerosol can, and sprayer head. Just fill jar with liquid to be sprayed. Attach sprayer head. Press valve. Freon propellant converts liquid into fine spray. To clean, put solvent in reservoir jar and spray a few short bursts.

Consider ordering extra jars to store needed solutions. As needed, just switch jars.

Ordering Information

Spra-Tool. Consists of 13 oz (368g) pressurized can, sprayer head, reservoir jar.

15-2335.80

15-233

Replacement Aerosol Power Pak. For use with 15-233.

Case of 12/27.80

Replacement Jar with Cap. For use with 15-233.

15-233-10Pk of 12/6.00

Anti-Static Spray

Neutralizes static charges from meter faces, TGA hangdown tubes and objects that attract airborne dust. Safe and easy to use. Non-staining. 12 oz (340g) aerosol can.

14-432-100Ea/4.50
Case of 12/40.50

Spray-On Fluorocarbon Lubricant.
See p 537.

Radioactive Decontamination Spray Foam. See p 570.

Air Gun

Blows away dust and lint

15-232-10

Dust-Off delivers bursts of clean, dry DuPont Freon® gas. Great cleaning tool for balances, electronic equipment, camera lenses, typewriters, microscopes. Especially good for items you don't want to touch. No residue, moisture, fingerprints.

Ordering Information

Dust-Off Complete

14 oz (398g) canister of DuPont Freon gas with reusable chrome trigger and nozzle assembly. Provides thousands of dry blasts. Push trigger gently for delicate puffs. Harder for powerful blasts.

15-232-1013.95

Dust-Off Refill

Full 14 oz (398g) canister of DuPont Freon gas used to replace container for 15-232-10.

15-232-132.95

Dust-Off Junior

Disposable 8 oz (226g) spray can with flexible extension nozzle to help get to those hard-to-reach spots. Built-in retaining ring slides down to hold nozzle firmly against can.

15-232-153.95

Ampoules Glass-sealable

For contamination-free storage of liquids. Corrosion-resistant glass. Flat bottoms and open-ended tips for sealing.

Anemometers for Air Velocity Measurement

Dial-Counter Model

For accurate velocity calculation. Biram type. Measures air velocity from 200-3000'/min (60.9-914m/min). Consists of several vanes connected to common shaft.

Facing into wind, vanes rotate to operate counter. Counter with 3 dials indicates rotations up to 10,000' (3048m). When timed with stopwatch, air velocity can be calculated.

Ordering Information: With jeweled movement, disconnect, automatic zero-setting adjustment. Includes leatherette carrying case and correction table.

1-235230.00

1-235

Direct-Reading Model

Instant air velocity measurements on 2 calibrated scales up to 3000'/min (914m/min) or 35 miles/hr (56.3km/hr). Unit consists of multi-blade rotor mounted in metal casing.

Anemometer is held in air stream. Velocity over anemometer's 7.6cm face is then determined by air pressure exerted on rotor. With grill velocity finder, velocities are converted to cu ft/min without calculation.

Ordering Information: With scale lock, magnetic damping, zero adjustment screw, calibrated precision spring. Includes detachable handle, leather case, velocity finder.

1-23782.40

1-237

Stopwatches. See pp 1176-1178.

FISHERbrand® Alkalimeters

Easy CO₂ and lime analysis

CO₂-Weight Model

Hydrochloric acid generates CO₂ in sample, then CO₂ is weighed in absorption bulbs. Use this unit to analyze CO₂ and lime in dolomite, limestone, similar carbonates. Determine SO₂ in paint pigments (ASTM D215).

Ordering Information: Borosilicate glass, 19cmH. With 250ml flask.

1-19860.50

Unit-Weight Model

Weigh whole apparatus on analytical balance to determine CO₂. Method recommended in *Gas Chemists' Handbook*, 3rd ed, p 634 and *Spencer's Cane Sugar Handbook*, 8th ed, p 664.

Ordering Information: Borosilicate glass, 17cmH. 3 joints.

Metabolism Cage

Polycarbonate 2-part unit for metabolic studies with mice, small rats, hamsters.

Top section is cage structure for housing animals weighing between 15 to 200g. Includes feed hopper, stainless-steel mesh floor, perforated top filter.

Bottom section is container for collecting samples. Includes: (A) deflection system to assure that any water or food which might escape is deflected outside urine and feces collection system, (B) separation mechanism provides efficient collection of urine and feces without contamination, (C) urine collection receptacle provides recoverable sample for analysis.

Top cage can be removed so that sample can be collected without removing animal. Autoclavable, easily disassembled for cleaning. 21 dia x 31cmH.

1-287Case of 1/57.20

Model for large rats and guinea pigs up to 500g is available on special order.

Restraining Cages

Clear, acrylic cages for maximum visibility and easy access of restrained animals. Adjustable tailgate fits into any of top three slots of cage. Tail extends through slot in tailgate for convenient intravenous injections. Bottom aperture for intramuscular and intraperitoneal injections as well as drainage of animal waste. Top aperture for access to head.

1-337B

Animal Clippers

For preparing mice, rats, hamsters for surgery without irritating or frightening them. Ribbed body to prevent slipping. With 1-305-2 general clipping head. 44 dia x 190mmL. Net wt 0.77kg. 115V AC/DC.

1-305Ea/67.95
Case of 6/387.30

Replacement Clipping Head

For clipping underbody, flanks, head, and face areas.

1-305-222.25

Surgical Shaving Head

Interchangeable with 1-305-2 head when used with 1-305 clipper.

1-305-522.45

Operating Tables

Polished stainless-steel operating platform adjustable to three positions. Stainless-steel drain extending full length of table. Legs and braces of tubular steel finished in white enamel. Line-cleats located on each side beneath tabletop. Shipping wt 52kg (115 lb). 117L x 61W x 102cmH.

1-331B300.00

Operating Board

Single piece of plastic with central elevation to support animal's body and head. Drainage slots at all four corners. Small, lightweight, practically indestructible. Used with variety of specimens for surgery, necropsy, biopsy, injection, restraint. With 8 neoprene rubber-padded clamps, 6 cleats, 4 retractors, 2 skids, elastic cord, elevator support. 40Lx20cmW.

1-33047.50

Animal Tags

Small aluminum tabs in set numbered 1 to 100 with 100 washers. Make hole in animal's ear with 1-337B punch. Insert tag through hole. Place washer in back of hole. Leave space for ear growth. Bend ends of tag back in rivet fashion.

1-337APk of 100/5.00

For punching holes into thin part of animal's ear.

Arsenic Detection
Apparatus

USP/AOAC Gutzeit method determines
arsenic in ppm

Standard apparatus for Gutzeit method consists of 2 oz (59ml) wide-mouth bottle for converting sample to arsine gas. Gas escapes to scrubbing tube where hydrogen sulfide is absorbed by lead acetate-soaked cotton. Strip of 1-413 sensitized paper in upper tube produces stain when it reacts with arsine. Length of stain is then compared with stain from a standard arsenic solution. Method described in U.S. Pharmacopeia and Methods of Analysis AOAC.

Ordering Information

Arsenic Apparatus. With glass parts, rubber stoppers. Without sensitized paper, cotton. (For cotton, see p 215.)

Simple Arsine Generator

1-405

Measure arsenic in ppb for industrial air pollution studies, petroleum refining

A 3-part apparatus for making multiple arsenic determinations. Sample containing arsenic is placed in generator flask where it is converted to arsine gas. In scrubber, hydrogen sulfide is removed from arsine gas with lead impregnated glass wool, permitting silver diethyldithiocarbamate reagent in absorber to form red complex with evolved arsine gas. Absorbance of this complex is proportional to arsenic concentration and is easily measured with colorimeter or spectrophotometer.

Samples can be prepared in interchangeable flasks and slipped one after another into scrubber/absorber units. Ball and socket joint makes it easy to clean and recharge scrubber. Clear-Seal® Joints do not require grease, eliminating this source of contamination.

Ordering Information: With 125ml flask, scrubber, and absorber. Made of borosilicate glass. FISHERbrand®. Without 5-885B clamp. Packed in foam case for protection in shipment and storage. (For clamp, see p 195.)
1-405.....23.40

Absorber Only.

Asphalt Testing Apparatus

Penetrometer

For ASTM D5 bituminous products testing

For determining penetration of semi-bituminous and solid bituminous materials according to ASTM D5. It consists of penetrometer dial, needle plunger, micrometer adjustment attached to heavy support column mounted on platform base.

Prepared sample is placed on base of apparatus. With micrometer adjustment, penetration needle is adjusted for proper contact with sample. When needle plunger lever is released, needle penetrates vertically into sample. Penetration is indicated on dial up to 38mm in 0.1mm divisions. By raising plunger at end of test, dial is reset to zero.

Ordering Information: Mounted on cast-aluminum structure, steel bearings, clutch release. Unit accepts all types of needles for asphalt testing. With 50g and 100g weights, but without penetration needles and sample cups. 30Lx27Wx53cmH. Shipping wt 11.3kg (25 lb).

13-399.....595.00
(Precision 73510)

Accessories

Penetrometer for Grease Determinations. Above penetrometer, when equipped with 13-401 penetration cone, can be used for grease penetration determinations according to ASTM D217. See p 879 for this cone and 13-401-10 arrowhead needle for ASTM D1321.

1-520

1-521

Asphalt Sample Cups

For holding samples in penetrometers and asphalt drying ovens. 90ml, seamless tin. ASTM D5 and D6, AASHTO T-49.

1-520Pk of 36/5.25

Transfer Dish

For holding 1-520 cup. Borosilicate glass dish 7.6Lx9.8cm dia. To prevent rocking, 3 metal cleats are embedded in layer of pitch at dish's bottom.

1-52123.50

13-399

Meets ASTM Specifications

Penetrometer Needles

Meets ASTM D5. For penetration testing. 1.00-1.02mm dia, tapered for 6.35mm to blunt end.

Distillation Thermometers

For high distillation work. Range -2° to $+400^{\circ}\text{C}$ in 1° subdivisions. Complies with ASTM 8C.

1-733.....9.90

For low distillation work. Range -2° to $+300^{\circ}\text{C}$ in 1° subdivisions. Nitrogen filled, total immersion. L 381mm. Complies with ASTM 7C.

1-603.....8.60

For stoppers, see p 1132.

Softening Point Apparatus

For ASTM E28, D36, and D2398 tests

1-551

Shouldered ring and ball apparatus for softening point determinations according to ASTM E28, D36, D2398. Apparatus consists of beaker with shelving, balls, rings, cover.

Samples are held within horizontal rings. Steel balls are placed on top of samples. As sample, which is submerged in water, is heated, weight of ball forces softened sample downward. Softening point is temperature at which sample falls 2.5cm to bottom shelf.

Ordering Information: With 2 standard balls, 2 shouldered rings, 2-540N beaker, 2 shelves (2.5cm apart) with support rods, metal cover.

1-551.....32.50

Accessories

Beaker

PYREX brand. 800ml Griffin type beaker with spout. Graduated from 50-750ml.

Model K31AB

Mettler Analytical Balances, Contd.

Mettler Analytical Balances have built-in weight sets. No "swingers", no "hang-ups".

Weight control knobs change weights in a matter of seconds. Each knob corresponds to a digit place.

Rapid taring eliminates container weighings. Separate tare readout permits you to eliminate container weight. On some Mettler analytical models, you can tare up to the full capacity of the balance in just seconds. This eliminates complications, reduces errors.

Series H balances can be supplied with a built-in hook for weighing below the balance. Balances so equipped can still be used for normal chamber weighings. Factory installed price: \$85.

Fine adjustment of zero point is done outside balance. Zero-point adjustment can be made for width of 5 scale divisions.

Optical tare knob permits setting the optical scale back to zero to compensate for container weight on pan. Taring is accomplished without paper, pencil, or calculations.

Digital readout of net weight in large, clear numbers — all in a row.

Filling guide permits continuous reading of approximate weight being added to the pan while optical scale is in motion.

Final adjustment knob for decimal places on digital readout.

H-AR Models feature a pneumatic release system that protects knife edges. It lowers the beam smoothly and gently even when operator turns arrestment lever abruptly.

Outstanding Features

Accurate weights are one-piece chrome-nickel steel rings. Weights are standardized against prototype weights at the National Bureau of Standards. Every combination of weights conforms to stated tolerances.

Automatic preweighing feature gives direct indication of rough weight. Part of optical scale is blocked out to avoid mistaking preliminary value for final results. Eliminates need for additional dialing step if unknown is more than 100g. In four H Models.

Rapid taring through full weighing range in four H Models permits dialing off container weights — up to the full capacity of the balance — in just seconds. Weight readout begins at zero regardless of tare used. Taring disc can be manually removed for permanent taring of a given container up to 8g. Five H Models with taring over the optical range

Nationwide service means free in-warranty balance protection by Mettler service specialists. Continuous service is available to keep your balance performing in accordance with original specifications.

Protective lock prevents operating weight knob for heavier weights when beam is released. Extends life of balance.

Legible readout of net weight in large, clear numbers. Model H balances feature digital readouts for data three times as fast and twice as accurate as reading the same data from dials or scales. Model M5 balances feature micrometer readouts for pinpoint weighing determinations.

Weight knob direction indicator shows which way to dial mechanical weights. Brings speed and convenience to the weighing of unknowns. In every Mettler H Model.

High-speed filling guide enables you to fill to target weight in less than half the usual time without starts and stops. Add material continuously right up to final few mg. In all H Models.

Performance Data For Mettler Analytical Balances

All Series H balances are equipped with high-speed filling guide and weight knob direction indicator. Other design data on three preceding pages.

H30

Basic macro balance with readout to 0.1mg; 160g capac.

H31AR

Same as H30 except with protective air release system; optical tare over 0-1000mg range; 161g capac.

H33AR

Same as H31AR except with preweighing feature.

H34

Macro balance with rapid taring over full 160g weighing range; readout to 0.1mg; 170g capac.

H35AR

Same as H34 except with protective air release system and preweighing feature.

Mettler Analytical Balances Performance Data, Contd.

Specially designed, low-cost Student Models H72 and H78AR now available

Two economical balances with digital readout and weight knobs at eye level above weighing compartment. Big readout numerals and clearly labeled controls make it easy for the novice. Weight knob direction arrows and rapid filling guide keep students on target and shorten weighing time significantly. Designed to hold their own through the academic storm: a weight knob interlock avoids abrupt weight application. Slip clutches prevent forcing of weight knobs. And, in the H78AR, an air release system safeguards knife edges.

Model H78AR buyers receive a condensed instruction label that can be attached to balance. Pads of weighing instructions and overhead transparencies on operating procedures are included in packing carton.

See specifications in table.

H72

Economical student macro balance, lowest priced analytical in Mettler line. Readout to 0.1mg; 160g capac; preweighing feature.

H78AR

Economical student model Same as H72 except with air release system. Protective features enable 2-year warranty even in school lab use.

H311

Macro balance with high weighing chamber for large containers. Readout to 0.1mg; 240g weighing range, optical tare over 0-1000mg range.

H315

High capacity balance, same as H311 except with 1000g weighing range

H542

Semi-microbalance with high weighing chamber, readout to 0.01mg, rapid taring over full 160g weighing range, 125mg optical range, 170g capac

M5*

Microbalance with 20g capac, ± 0.001 mg precision, readout to 0.001mg. Ideal for differential weighings

- Power supply110-240V, 50-60Hz
- Supplied with...dust cover, spare bulb

These Top-Loaders are built to last. You can expect continued reproducibility throughout the long life of your balance.

Over-Under Scale is an easy way to check weighings directly to plus-minus values.

Mettler Levelmatic feature automatically compensates for out-of-plumb weighing surfaces.

Easily Accessible Hook under the balance is valuable for weighing objects below the balance in heating or drying ovens, and for working with corrosive, poisonous, or radioactive substances in protective compartments.

Compact, Digital Readout presents weighing results directly without confusion and reading errors.

Filling Guide allows you to add your powder or liquid to the pan as fast as you please without stopping to check weight.

Tare Adjustment Knob helps you to tare off container weight without paper, pencil, or calculations.

Operating Controls are grouped within easy reach. Weighings are fast and accurate.

These Rugged Top-Loaders will deliver hundreds of thousands of weighings, even when subjected to rigorous production-line use. Dust trap prevents foreign matter from reaching weighing mechanism. Friction clutches protect balance against damage if control knobs are forced past their stops.

Set of Balance Weights in every Mettler Top-Loader is standardized against prototype weights of the NBS. Weights are machined, electrolytically etched, polished, and cleaned. Every combination of weights you dial will conform to standard tolerances.

Low-Friction Suspension System reduces friction of knife-edges on beam to absolute minimum. Self-centering knife-edges move on sapphire planes supported by ball bearings.

Self-leveling Levelmatic feature, standard on most models, compensates for uneven weighing surfaces that shift zero point. If tilt exceeds balance compensation range, readout is covered. Balances with this feature designated by "PN" prefix or "N" suffix with model number. Five of the smaller models are available without this provision.

Compact, Digital Readout produces rapid, reliable weighing results in large, bright numbers. If vibrating machinery is a problem, consider Mettler P163, P1210, P2010. All three models have large digital readouts that are less sensitive to vibration than other balances.

Easily Accessible Hook is connected directly beneath the pan for weighing below the balance. Time-saving device for conducting density and specific gravity determinations.

Filling Guide speeds up weighing of powders or liquids. Guide shows weight of sample on pan while you're adding more material — to within a few mg of the desired weight.

Most Important Controls can be understood at a glance. Operation is so simple that a person who has never used a balance can make weighings to the highest level of accuracy with only a few minutes of instruction.

Tare Adjustment Knob yields taring with minimum loss of time. Rapid taring with micro adjustment covers range of balance's optical scale.

Over-Under Scale is reliable for high-speed checkweighing. Set upper and lower weight limits, then check your sample against limits. On all models except P(N)163, PN323 P(N)1210 PN2210

Zero-adjustment disk sets optical scale to exact zero

Performance Data for Mettler
Top-Loading Balances

(See two preceding pages.)

PN163
Balance with 170g capac, 0.001g readability, 10g optical tare. Digital readout has extra-large, brighter numbers. Optical scale with 100 analog div permits increasing number size. Final 2 digits are dialed in with 100-div micrometer scale. With Levelmatic feature.
1-913-87PN
1825.00

PN323
Balance with 330g capac, 0.001g readability, 10g optical tare. Equipped with filling guide and Levelmatic feature.
1-913-65PN
2050.00

P1000
Balance with 1300g capac using no mechanical weights; 0.1g readability, 300g taring range. Arrestment or release is not required. With filling guide, over-under scale.
1-913-104
1425.00

P1200
Balance with 1300g capac, 0.01g readability, 100g optical tare and taring throughout full range. With filling guide and over-under scale. Without Levelmatic feature.
1-913-102
1795.00

P163
Same as PN163 but without Levelmatic feature.
1-913-86
1595.00

**PN1210**

Similar to P1200 but with Levelmatic feature and digital readout with extra-large, brighter numbers. 100-div optical scale provides rapid readings directly to 1g. Final 2 digits are dialed in with 100-div micrometer scale. With filling guide. Without over-under scale.

1-913-89PN
1850.00

P1210

Same as PN 1210 but without Levelmatic feature.

1-913-88
1625.00

P2010N

Balance with 2500g capac, 0.1g readability, 500g optical tare. Digital readout has extra-large, brighter numbers. With filling guide, over-under scale, Levelmatic feature.

1-913-68N
1695.00

P2010

Same as P2010N but without Levelmatic feature.

1-913-68
1525.00

PN2210

Balance with 2300g capac, 0.01g readability, 100g optical tare. Rapid dial taring with micro adjustment. High capacity achieved by 1kg weight switch. With filling guide and Levelmatic feature.

1-913-67PN
2085.00

P3N

Balance with 5000g capac using no mechanical weights; 0.2g readability, 3000g optical range, 2000g tare range. Arrestment or release is not required. With over-under scale to 11g and Levelmatic feature.

1-913-106
1795.00

P5N

Balance with 6000g capac, 0.1g readability, 1000g optical tare, max tare 5500g. Precision of ± 0.05 g is approx one decimal place better than other balances of this size and weight class. Optical range of 1000g in two 500g steps controlled by single turn of weight knob. With filling guide, over-under scale, Levelmatic feature.

1-913-107
2195.00

P11N/SW

Similar to P5N but with 11,000g capac achieved by 5kg weight switch which also increases max tare to 10,500g.

1-913-91
2695.00

P10N

Balance with 13kg capac using no mechanical weights; 1g readability, 10kg optical scale, 3kg optical tare. With filling guide, over-under scale, Levelmatic feature

1-913-110

3 Low-Priced Top-Loading Mettler E Balances

Compact economy-size top loaders with capacity from 300 to 2600g and readability from 0.1 to 0.01g. Ideal for schools where students can easily learn how to use and read them. A good choice for the lab with a large workload and limited budget. Useful in industrial control applications where speed and ruggedness are important.

Mettler E Balances work quickly and efficiently. Just tare off container weight. Add substance to container. Set digital readout on Model E200 and E2000. In 1.5 seconds, read results.

Mettler E200 and E2000 are fully digital, producing easy-to-read weighing results down to the last decimal. On Model E1000, every gram is individually numbered with tenths of a gram read by estimation.

Knife edges and bearing-load supports combined with tension-spring-force compensation systems. With filling guide, fine zero adjustment, hanger for below balance weighing.

Mettler E20 High-Capacity Platform Balance

Weighing range 20kg, for bulky loads encountered in quality control, production and plant use. Taring range 5kg by re-zeroing optical scale with side knob . . . no calculations.

Projected scale is distortion-free, digital to nearest 50g, with analog scale in 10g divisions, estimable to 2g. Air-damped. Result in 3 seconds. Reproducibility, ±1g.

Weighing pan is a big, accessible platform 33x46cm, suitable for large containers, bulky articles. Portable. Net weight, 19kg.

Equipped with tare indicator and filling guide (shows approximate weight continuously). 110-240V 50/60Hz.

1-913-732350.00

25kg capacity,
readable to 2g

1-913-73

Mettler Modular Electronic Balances

Save up to 80% operating time. With these balances, operators don't have to spend time reading, writing, or calculating weighing results. They are super-fast. Beams take less than 2 seconds to come to rest (except micro models).

Weighing results from control and digital readout units are fed directly to the automatic processing system. Data recording and transfer errors are eliminated.

Mettler's modular electronic balance line includes 3 top-loaders, 4 analytical, and 3 micro electronic balances with separate control units that can automatically convert net weights into moisture percentages, standard deviations or mean values . . . and can feed data into recorders, or computers in just seconds.

Simple to use too. Built-in dial weights are added or removed by turning weight control knobs. Zero range and sensitivity are adjusted by turning the appropriate knobs on the control unit. Continuous rapid taring over the entire range is possible.

For more information about Mettler Electronic Balances, as well as digital display and cycle control units, check no. 1 on reader service card at end of blue index pages.

Mettler Compact Electronic Balances

Unitized top-loaders

Touch-bar control

1-913-137

1-913-139

Mettler PL300 and PL3000 Balances

Easy-to-operate, reliable top-loaders. Require no more bench space than an ordinary writing tablet. Convenient for lab and production plant use. No special training needed.

Result appears within 1.5 seconds on 5-digit display of 7-segment numerals 13mm high. Readout is glare-free and clearly visible from any angle. All segments light up momentarily when turned on, as a performance check.

A touch of the control bar actuates the on-off switch. Tares container weight automatically. Zeroes the balance. Automatic tare calculator with built-in memory allows cumulative weight indication of consecutive weight additions to the same container. Perfect for compounding. No tedious calculations. Just weigh out consecutive ingredients. As a final check, readout will show total weight of mixture when filled container is removed from balance.

For checkweighing, you can read plus/minus deviations from a reference weight directly, without computation.

Low height of balances allows comfortable operation while sitting. Lightweight; easily carried to different work station. No arresting needed. Relatively insensitive to level changes.

Balance can be operated by a foot pedal to free both hands for sample manipulation. Foot pedal is not included. Available on special order. Contact your nearest Fisher branch for information.

Taring range of both models accommodates plastic weighing containers in common use.

Mettler Unitized Electronic Top-Loading Balances

Single-control operation
BCD output, six models

Completely electronic and exceptionally fast. Operation controlled by a single touch-bar which actuates on-off switch. Tares automatically over entire weighing range. Resets readout to zero. Dual Range Model PR1200 has two pushbuttons for 120g/1200g range selection. Results displayed in large, lighted numerals in less than 2.5 seconds (just one second with the least sensitive model). Automatic tare calculator with built-in memory allows cumulative weight indication of consecutive weight additions to same container. If bal-

ance is used for checkweighing, you can read deviations from reference weight directly from balance. No calculations. Digital output, available on all Mettler electronic models with the exception of PR1200, interfaces to printing devices, tape punch, weight-count converters, desk top calculators, other automated data processors. Only accurate, reliable data is transferred for processing. If balance is overloaded, readout is blanked out and data transfer is blocked. Model PR1200 has analog output of 0-7V on low (120g) range.

(Models PT15 and PS15/30 have same configuration)

Weight-Count Converter

For PS15, PT1200,
PS1200, PT200

Mettler GC11 converter accessory plugs into BCD output of electronic top-loading balances. Gives automatic counts of small, uniform parts such as tablets and electronic components. Place known quantity of parts in tared container on balance, and dial the quantity on GC11 reference control. Push "storage" button. The 6-digit readout of GC11 will now show count directly for subsequent batches of parts. Result is also delivered as BCD output for printers or EDP interfacing.

1-913-208.....2750.00

GC111 Mean Value Input Attachment. Connects to GC11 to introduce weight conversion factor, such as 453.6 g/lb or 0.065 g/grain, so that readings are directly in pounds, grains, or other required units.

1-913-209.....375.00

Accessories for Mettler Balances

Infrared Drying Accessory

Dries top-loader samples for moisture determinations

1-913-97

Drying Chamber On Mettler Balance

Mettler LP11

Converts top-loading balances P163, PN163, and PN323 into highly efficient moisture-determination balances.

As shown above, lamp housing of drying chamber tilts back out of the way to load the sample. In operation, the lamp seals the sample in a draft-free space and removes all moisture from sample uniformly and efficiently. Within a few minutes, sample is reweighed to determine moisture loss to within 1 mg.

Small samples need less drying

time and give faster results. 1 g sample dries 2 to 4 times faster than 10g sample. Attachment can handle large samples, up to maximum capacity of balance.

Ordering Information: Consists of drying chamber with lamp housing, fixed lamp position, and six-position heat intensity switch. Two-tone metal housing. Includes 50 aluminum pans. 28Lx25W x33cmH. Shipping wt. 10kg (22 lb); net wt 4.2kg. 115V 50-60Hz.
1-913-97690.00

1-912-5

1-914-45

1-913-122

1-908-21

1-914-25

Pans

Aluminum, disposable, 9.5cm dia, 8 mm deep. For 1-913-97.

1-913-97ABox of 50/15.00

Infrared Lamp

For 1-913-97.

1-913-97C5.30

Hanger

For below the base weighing beneath Mettler H balances.

1-913-11756.50

Nylon Gloves

For Mettler M5 and other micro balances. White, size 9.

1-912-5Pk of 3 pr/9.65

Damping Element

Absorbs vibrations. Multi-layered fiber-impregnated pads for use with marble balance tables. Balance operation undisturbed.

1-914-45Set of 4/3.85

Absorbaspil Pads

Protect against spilled chemicals For Mettler H Balances. Size 18Lx16cmW to fit beneath the balance pan.

1-913-122Pk of 20 4.75

Magnifiers

For Mettler H Balances except those with digital readout. This 2X magnifier assists reading a vernier or micrometer scale. In metal case which attaches to instrument by knurled screw.

1-908-2120.50

For Mettler E1000 Balance. Similar to 1-908-21.

1-912-2216.00

Compensating Weight

Converts tared balance to untared balance. Attaches to stirrup hook. 20g weight calibrated to ± 1 mg.

1-914-4331.00

Vibro Spatula

Controls feeding of samples to balance pan. Powdered or granular materials are dispensed with ± 0.1 mg precision in seconds. Speed adjusted by knob on handle. With 4 interchangeable spoons. 110-125V 60Hz.

1-914-2586.50

See page 53 for balance tables

Mettler Balance Accessories, contd.

Illuminating Scale Lamps

For Mettler H and P Balances.
1-908-1202.70

For Mettler H10T and H20T Balances with printout.
1-908-1219.10

For Mettler M5 Balances. Painted and shielded, 6-8V.
1-910-56.75

For Mettler E Balances.
1-913-752.45

Plastic Covers

For Mettler M5 Balances. 36Lx32Wx42cmH.
1-912-1511.75

For Mettler H Balances with metal housing, except those with printout and those listed under 1-908-24.
1-908-238.25

For Mettler H Balances models H14, H315, H311, and H542.
1-908-2410.75

For Mettler E Balances models E20, E200, E1000, and E2000.
1-913-7613.50

For small Mettler P Balances except P2210. In-use cover with clear viewing windows. Protects balance from spillage.
1-913-1125.90

For Mettler P2210 Balances.
1-913-11320.50

Similar to 1-913-112 but for large Mettler P Balances. Fits P3N and larger models.
1-913-11415.50

Weighing Dishes

1-914-30

For liquid and powdered samples. Dishes easily convert any Mettler H Balance into a tared balance. Quite useful when repeated weighings are made with sample vessels. Calibrated to ± 1 mg of their specified weights. Glass

Size	Cat. No.	Ea
10g, 50mm dia.	1-914-30	11.75
20g, 70mm dia.	1-914-32	16.50

Weighing Scoops

1-914-36

Similar to 1-914-30 and 1-914-32 dishes, but shaped for convenient transferring of powdered samples into narrow-necked flasks or bottles. Nickel alloy.

Size	Cat. No.	Ea
10g	1-914-36	36.00
20g	1-914-38	38.00

Draft Shield

Protect weighing pans from air currents

1-914-5

For Mettler Top-Loaders. Hinged Plexiglas bubble eliminates balance scale fluctuations. Bubble provides 16.5cm dia inside working area at pan level and 15cm above pan.

Your Lab Ready for an OSHA Inspector?

Here's a manual that can help!

Fisher Safety Manual . . . 65 pages of useful safety tips.

Covers OSHA requirements, safety equipment, accident prevention, laboratory first aid, fires and fire fighting . . . gives you dozens of references on laboratory safety.

Just check no. 2 on reader service card at end of blue index pages. We'll have a copy on its way by return mail.

Scoops, Cradles, Pans, Draft Shield for Mettler P Balances

P-Balance with
1-914-39 scoop and 1-914-40 cradle

Scoops

Simplify weighings of bulky material. High sides, low ends. 37Lx27Wx12cmH. Requires 1-914-40 or 1-914-41 cradle. Made of aluminum.

1-914-3917.25

Cradles

To hold 1-914-39 scoops. Interchangeable with standard balance pans. Cradles are placed on balance after balance pan and its support are removed. Before weighing, tare off cradle weight. Aluminum; mounted on its own pan support.

For Mettler P1000, P1200, P1210, P2000, P2010, PN2210.

1-914-4052.00

For Mettler P3N, P5N, P6, P10N, P11N/SW.

1-914-4153.50

1-913-124

Draft Shield for Mettler P Balances

Replacement for shield furnished with balances P163, PN163, and PN323.

1-913-12417.00

1-913-125

Cover

For 1-913-124 Shield.

1-913-1253.80

Top-Loader Balance Pans

Each has spout for easy pouring of liquid or granular material. Each made to specific weight for convenient taring.

General Purpose Weighing Pan

Mixing Pan

Stainless steel, for P3N, P5N, P6, P10N, P11N/SW, P2000, P2010, PN2210. 300g wt; 1000cm³ capac; 70mm deep; 178mm dia. Placed directly on balance pan.

1-913-6076.00

Pan for Bulky Materials and Large Lab Animals

Stainless steel, 700g wt; 4000 cm³ capac; 140mm depth; 285mm dia. For use with P3N, P5N, P6, P10N, P11N/SW.

1-913-58136.00

1-913-56

Stainless steel, for use with P3N, P5N, P6, P10N, P11N/SW, P2000, P2010, PN2210. 400g wt; 2000 cm³ capac; 89mm depth; 229mm dia.

1-913-5675.00

Pans for Powdered Materials and Small Lab Animals

1-913-118

Stainless steel, with flanged bottom. Can be used in place of balance pan. 70g wt; 230cm³ capac; 38mm depth; 89mm dia. Used with Mettler P120, P160, P162, P163, PN323.

1-913-11820.50

Pans for Liquid Weighings

1-913-120

Plastic balance pan with handle and flanged bottom. Used with Mettler P1000, P1200, P1210, P2000. 270g wt; 1500cm³ capac; 127mm depth; 152mm dia. Smooth finish, chemically resistant. Can be used in place of balance pan.

1-913-12017.50

Ainsworth Single-Pan Analytical Balances . . . just 30 seconds per weighing

These high precision one-pan balances perform reliably in laboratories, schools, and industries. Each balance is equipped with set of built-in weights, which operate without ever being touched. Weight operation knobs, zero adjustment knob, and all other controls (arrestment, pan brake, light switch) are located on front panel and are plainly marked for easy identification. Substitution method is used: weights are removed from beam rather than added. Weighings take about 30 seconds. First, zero point is checked and sample is placed on pan. Control knob is turned to "dial" position. As selector knobs are ad-

justed, weights on beam corresponding to sample weight are removed. Control knob is then turned to "read" position. Full results are displayed on digital readout.

Weights are made of Brunton non-magnetic metal and meet individual and group tolerances for Class S weights established by the NBS. Each weight is suspended from the beam by a jeweled gimbal assembly to maintain a constant load and thus assure constant sensitivity through full weighing range.

Pan release, located on the front, has three operating positions. Weight of the unknown can be approached without beam and knife

edges being damaged should a great weight difference exist.

Weighing chamber is glass-enclosed with two sliding side doors. Balance housing is finished in baked enamel. Jeweled bearing planes and knife edges, Delrin cams, stirrups with 4 ruby jewels. Patent device on beam to compensate for temperature influence on sensitivity. All balances are supplied with accessories identified in table on next page and are for operation on 115V 50/60Hz. UL approved.

Substitution Method of Weighing
Fast, Precise Results

Equal-Arm Analytical Chainweight Balance

200g capacity, 0.1mg sensitivity

Requires no fractional weights

Ainsworth Type DLB. A two-pan equal-arm balance with rider, chainweight device, and 15.2cm aluminum notched beam. Suitable for a variety of jobs including differential weighing.

Sample is placed on one pan and weights are put on other pan to counterbalance to nearest whole gram. Double-hook rider is positioned on the beam to determine the weight to the nearest 100mg. Chainweight device is cranked by a large handwheel to determine sample weight to 0.1mg.

Capacity is 200g; readability, 0.05mg; reproducibility, ±0.05mg.

Ordering Information: In aluminum housing finished in smooth brown hammertone with a black carrara glass floor. 26Lx52Wx47cmH. Stainless-steel hangers, 10.2cm wide at base, 22cm high, with 7.6cm removable nickel-plated brass pans. Removable back door, bottom drawer, arc-type beam-arresting mechanism. Shipping wt 27.7kg(61 lb); net wt 13.2kg

1-929

For weights, see 2-216B on page 55

Digimetric Electronic Top-Loading Balances

Fast automatic weighings from milligrams to kilograms
Pushbutton zero and tare

1-920-313

Five fully automatic top-loaders with capacities to 10kg. Four models have multi-range selector switch for optimal sensitivity with smaller loads. Press pushbutton for instant zeroing or taring up to full weighing capacity. Result is speedy and totally digital. No weight knobs to dial or analog scales to read.

Individual weighings take 2 seconds. On multirange models, first select appropriate capacity with range switch. Place container on pan and push ZERO button. Balance remembers container weight. Add sample to container and read result. Electronic 5-digit readout shows weight in large, easy-to-read numerals. Display includes polarity indication. Overload signal.

Balances are not level-sensitive. Modular, solid-state circuitry.

BCD Output
Provided in 4 models for connection to printer or EDP system. Parallel, 1-2-4-8, DTL/TTL compatible.

Model 35DT with Analog Integrator
Single-range 2kg balance. Integrator automatically provides averaged result to compensate for shiftings in effective weight. Ideal for weighing live animals to nearest 0.1g. BCD output and print command signal.

Model 20DT
Dual-range 2kg balance with 10mg sensitivity on 200g range. Economical model of choice where output to peripheral equipment is not required.

Model 30DT
Triple-range 2kg balance with 1mg sensitivity on 20g range. Both BCD and 0-2.6V analog outputs.

Model 30DTI with Digital Integrator
Same as 30DT with addition of integrator which presents the average of 4, 10, 20, or 40 rapid consecutive weighings. Result is accurate even in areas of high vibration or when weighing live animals. Zero weight is averaged as well as load weight. Switch selects number of weighings to be integrated. Each weighing takes 0.4 sec. Also transmits print command signal when integrated result is displayed.

Model 30DK
A 10kg dual-range balance. Weighs to nearest 0.1g on 2kg range. Overload lamp indicates when 10kg limit is exceeded. BCD output. Analog signal of 0-4.4V on high range, 0-2.6V on low range. Perfect for high-capacity batching with capability of peripheral data recording or EDP interfacing.

Ordering Information
Digimetric Top-Loading Balances are furnished for operation on 115V 50/60Hz. See table for specifications.

Semi-Micro Integrating Balance with Remote Control

3 automatic ranges to 20g
 10 μ g sensitivity on 0.2g range
 Capacity up to 200g

Digimetric 1000DTI

Null-restoring, triple-range balance with digital integrator. Performs accurate weighings despite environmental vibration. Balance controls and 5-digit readout are housed apart from weighing unit for remote operation. Weighings are fully automatic to 20g. External weights can be applied to increase weighing capacity to 200g.

Perfect for remote weighings in hot cells and isolation chambers. Useful for weighing pollution test filters, textile fibers, fine electronic parts. BCD and 0-2.8V analog outputs allow connection to peripheral equipment for recording, printout, or data processing.

Integrator averages 4, 10, 20, or 40 weighings, according to switch selection. Each weighing takes 0.4 sec. Transmits print command signal when integrated result is displayed. Zeroing and taring up to full weighing range are automatic. BCD output: parallel, 1-2-4-8, DTL/TTL compatible.

Ordering Information: With pan 8cm dia. Bow clearance 8.5Wx10.8cmH. Weighing chamber 14.6Lx14.6Wx14.6cmH. Over-all dimensions: weighing unit 30Lx15Wx24cmH; control/readout unit 29Lx20Wx17cmH. Net wt 10kg. 115V 50/60Hz.

Torbal Top-Loading Balances PL-D Series

Optical readout . . . digital vernier
 Built-in substitution weights
 Torsion-band suspension

Top-loading, digital readout balances with built-in dial-operated weights and optical projection system with digital vernier. Torsion-band suspension. Much more rugged than those accident-prone knife edges.

Fast, simple weighings. Place sample on pan. Turn weight loading knob on either right or left side of case. Automatically removes weights from beam according to substitution weighing principle. In-line digital readout consists of dialed weight window, projected digital scale, and digital vernier window.

To tare, rotate knob on side of balance. Use rear pan to add counter-weights to increase tare capacity. Also for the 1000g range-extension weight furnished with Model PL-12D.

Ordering Information: Epoxy metal case. Basic torsion construction with silicone fluid damping system, delrin and nylon cams, coated surface mirrors. 42Lx32Wx19cmH. Supplied with stainless-steel balance pan and built-in stainless-steel weight set. Model PL-12D includes 1kg range-extension weight. Shp wt 20.4kg (45 lb); net wt 15.9kg. 120V 60Hz.

Cahn Model 4700 Electrobalance®

Automatic, error-free digital readings
Capacity to 2.5g, sensitivity to 0.1 μ g

20-068-20

Simply place sample on the pan and read result directly in milligrams. Decimal point of the 20,000-count digital display is positioned automatically as weighing range is selected. Fully automatic. No manual nulling. No interpretations of sample weight or percentage calculations necessary. Automatic operation speeds weighings. Minimizes operator fatigue.

Maximum sample (or taring) capacity, 2.5g. Electrical weighing capacity, 1g. Sensitivity on finest (2mg) range, 0.1 μ g.

Four switch-selected weighing ranges: 0-2, 0-20, 0-200, and 0-1000mg. Maximum readout on finest range, 1.9999mg. Resolution is 0.005% of capacity on the three lower ranges, 0.01% on 1000mg range.

Ultimate precision is 0.1 μ g. Limiting precision is 0.01% of electrical range or, if larger, 0.0002% of sample load when taring (0.001% of load on highest range). Accuracy is $\pm 0.05\%$ of electrical range, or better.

Major applications include CHN analysis. Sample preparation for atomic absorption spectrophotometry, UV and IR spectroscopy, and thermal analytical techniques. Weighing compartment is large enough to accommodate 60mm membrane filters for pollution testing.

Output can be interfaced to computers. Display includes polarity sign (full negative range) and overrange error indication.

Instrument is compact, of shock-resistant construction, and easily portable. Leveling is not critical. For remote operation, weighing compartment can be removed and placed in a controlled-environment location.

Ordering Information: With stirrups, calibration weights, pans, forceps, instructions. 18Lx41Wx28cmH, with carrying handle. Shp wt 11kg (25 lb). 100-230V 50/60Hz

20-068-20 3350.00
(Cahn 4700)

Model 4700 Air Monitor System

Measures worker's dust level . . .
Meets OSHA, MESA requirements

20-070-19

Cahn Filterweigh System measures amounts of dust in industrial work areas, according to OSHA, Mining Enforcement and Safety Administration regulations.

How it works: each employee wears dust sampler with 37mm dia membrane filter in cassette, pinned on his clothing at chest level. Battery-operated pump, worn on employee's belt, draws air through filter. After specified time, weigh filter on Cahn Electrobalance®. Threshold limit value tables tell you whether dust content is above or below the safe level.

System has all the air sampling and filter weighing equipment plus Cahn Model 4700 Electrobalance. If you already have an Electrobalance, just buy the Filterweigh accessory kit, which converts the balance for weighing 37mm membrane filters, and the portable air sampling kit.

Balance has 2.5g capac with 0.1 μ g maximum sensitivity. Results automatically shown on 20,000 count digital panel meter.

Ordering Information

Filterweigh System 4700.

Consists of 20-068-20 Model 4700 Electrobalance, and, 20-070-18 accessory kit, and 20-070-19 air sampling kit. 115V 60Hz. (See following listings.)

20-070-12 3780.00
(Cahn 4500-4)

Filter Accessory Kit. Consists of 2 stirrup pans for 37mm filters, 3 calibration weights, 3 tare weights, 1 radioactive ionizing unit for removing static electric charge from filter.

20-070-18 125.00
(Cahn 4021)

Air Sampling Kit.

Consists of portable air pump with rechargeable battery, 3.75V charger, gravimetric dust sampler, pk of 12 filter cassettes, box of 100 membrane filters, jar of 60 cellulose sealing bands, pk of 3 filter support screens, brush. In foam-lined carrying case. Charger operates on 115V 60Hz.

20-070-19 650.00
(Cahn 4502)

Membrane Filters. For pin-on holder of 20-070-19 air sampling kit. Type VM-1 polyvinyl chloride. Dia, 37mm. Pore size, 5 μ m

9-730-73 Pk of 100 24.00

Cahn Model 4600 Electrobalance

20-068-10

Balance has 10 electrical ranges for weighing up to 2.5g.

Beam position displayed on calibrated null-meter. Detects beam movement due to mass difference to 100ng. Eliminates visual matching of beam pointer shadow with reference line. Even unskilled operator can checkweigh lightweight parts to 1 μ g in seconds. Ideal for rapid industrial quality control weighings.

Capacity on Loop A, 1.0g. Loop B, 2.5g. Max sensitivity: Loop A, 0.0001mg. Loop B, 0.0005mg. Accuracy: 0.05% of range. Readability: 0.0001mg. Precision: 0.0002% of load, 0.01% of range; 0.0002mg ultimate precision.

Ordering Information: With stirrups, forceps, calibration weight, instructions. 18Lx41Wx28cmH. Shipping wt 11kg (25 lb). 100-130V 60Hz.

20-068-10.....2800.00
(Cahn 4600)

Cahn Model 4400 Electrobalance

20-064-5

Lowest-priced electrobalance available. Load capacity to 1.5g. Precision up to 10⁻⁷g. Accuracy is 0.05% of range. Valuable in pollution studies, biological research, forensic studies.

Balance has 9 electrical ranges for weighing small and large samples. Capacity on Loop A is 150mg, (0.0001mg sensitivity); on Loop B, 1.5g (0.0005mg sensitivity). Mass values determined by reading potentiometer.

Ordering Information: With stirrups, forceps, calibration weights, instructions. 18Lx31Wx29cmH. Shipping wt 11kg (25 lb). 100-130V 60Hz.

20-064-5.....2250.00
(Cahn 4400)

Accessories for Cahn Electrobalances

Stirrup. For 20-068-20, 20-068-10 and 20-064-5 balances. Holds sample containers on the balance. Nichrome wire, 8.3mg.

20-065-15.....20.00
(Cahn 1129)

Micro-pans. For samples. Aluminum foil, 7mg, 12mm dia.

20-065-17A.....Pk of 20/11.50
20-065-17B.....Pk of 100/26.00
(Cahn 1187)

20-065-17

Balances

Electronic Analytical Balance

Torsion suspension, sensitive null indicator
Digital readout to 160.0000g
Accurate to 4th decimal place

1-918

Torbal Model EA-1

An electronic one-pan analytical balance with 160g capacity and $\pm 0.03\text{mg}$ precision. Instrument is equipped with standard balance controls, except it has a null indicator and torsion mechanism, instead of conventional optical scale and knife-edges.

Null indicator is more sensitive and accurate than usual optical scale. A 0.1mg change in weight causes null indicator to move 0.2 to 0.25mm either to increase or decrease position.

Torsion mechanism consists of alloy metal bands which twist slightly when mass is added to balance pan. Without knife-edges, Model EA-1 has no beam arrestment to operate when loading and unloading balance. Absence of knife-edges makes Model EA-1 a sensitive balance, unaffected by wear, dust, or minor changes in level.

To weigh unknowns, place sample on pan. Rotate control knobs to exact weight of sample and until null indicator is at zero. Read weight directly to 0.1mg or estimate to 0.05mg from digital display.

For rapid sample weighing, set desired sample weight on digital readout. Add material to pan until null indicator reads zero.

Continuous taring is variable from 8 to 10g. Internal weights in balance can be used for taring up to full capacity of weight control mechanism (159.9g). Additional 20g tare is available by using aluminum pan, instead of stainless-steel one provided (By not using any pan, additional 40g tare is available).

Ordering Information: In metal housing. Weighing system mounted on a heavy aluminum alloy casting. 32Lx44Wx51cmH. Large weighing chamber accessible from both sides. 15Lx26Wx23cmH. Stainless-steel 10.2cm balance pan, non-magnetic stainless-steel built-in weights with $\pm 0.1\text{mg}$ tolerance. Silicone fluid damping system. Shipping wt 34kg (75 lb), net wt 19.1kg. 110-120V 50/60Hz.

1225.00

Fisher-Ainsworth Electronic Balance Model A-200

Small enough to fit in a briefcase

200g . . . digital

Automatic taring

Touch-bar control

Full guarantee

Priced lower than competition

Accurate to closest 10mg

Taring is easy:

- Place pan on platform
- Depress tare bar . . .
- Balance will zero
- Place sample in pan
- Weight appears on readout

Supremely easy to operate. Press control bar and balance is zeroed. Put empty container on platform — press bar and it's tared. Add sample. You have your answer within 3 seconds.

Display range 0.01 to 199.99g. Digits are 13mm tall. Excellent visibility on sloping panel. As accurate as it is readable — to the nearest 10mg. Comfortable to use standing or sitting.

Small enough, light enough, to carry with you in a briefcase. You can move it anywhere, start using immediately. This convenient, dependable weighing instrument can quickly become indispensable to just about any type of laboratory. Perfect for quality control and production plant use. Ultra simplicity and durable construction make it a natural for educational labs.

Built-in reliability allows this guarantee of mechanical and electronic components: 5 years on mechanism, 1 year on electronics, covering parts and labor.

For checkweighing, place standard reference weight on the balance. Press bar to set zero. Now when you place samples on for checking, readout shows you directly the deviation from standard weight, with plus or minus sign. No computations.

For compounding, just weigh out first ingredient. Press bar to set zero. Add consecutive ingredients to same container, zeroing before each new component. Eliminates calculations. Memory of automatic tare calculator keeps track of the cumulative weight. After the last ingredient is added, press bar, remove container and the readout will show total weight of mixture to give you a final check.

Ordering Information: Equipped with 5-digit electronic display. Die-cast aluminum housing, baked epoxy finish. Power switch on front panel. Platform diameter, 7.6cm. Over-all dimensions, 23Lx15Wx7.6cmH. Net weight, 2.3kg. 115/230V 50/60Hz.

1-909-600

Ainsworth Model A-4

A single-pan electro-mechanical balance with 160g capacity and 0.1mg sensitivity. Result is indicated within 5 seconds to nearest 0.1mg. LED display has easily readable illuminated digits 13mm tall. Built-in weights are operated automatically throughout balance capacity. Weights are removed from beam in accordance with substitution principle.

Operation is simple and fast. Press TARE bar for automatic taring of empty container up to full balance capacity of 160g. Arrestment knob has pre-weigh position for electronic selection of built-in weights, prior to full release for automatic weighing and direct indication of sample weight.

Ordering Information: Metal housing with baked epoxy finish. Weighing system mounted on heavy aluminum alloy casting. Jewel knife edges and bearing planes. Weighing chamber 18Lx19Wx19cmH; accessible from both sides. Stainless-steel pan. Clearance between bows, 111mm. Bow height, 190mm. Built-in weights are non-magnetic stainless steel, meet Class S tolerances. Over-all dimensions, 41Lx21W x40cmH. Shipping weight 14.5kg (32 lb). 115/230V 50/60Hz.

Accessories for Model A-4 Balance

Weigh-Below Accessory. Consists of suspension hanger and tare weight.

1-909-60295.00

Pollution Filter Accessory. Consists of extension chamber 18Lx8.9Wx21cmH which mounts on door opening of balance, and half-round stainless-steel pan 11Lx12.7 cmW, with tare weight. Accommodates 20.3x25.4cm filters

1-909-604150.00

Specific Gravity Balances

Westphal Balance

For liquid densities heavier or lighter than water

2-150

FISHERbrand®. Balance consists of adjustable pillar, steel knife edge on cobalite bearings, riders (5.0, 0.5, 0.05, 0.005g), glass plummet, and cylinder.

Glass plummet is suspended from beam and placed in cylinder containing liquid sample. Riders are placed on beam in succession until beam balances. Sum of the rider settings is specific gravity.

If liquid is lighter than water, position of the 5g rider shows tenths of a unit, and the smaller riders give the second, third, and fourth decimal places. If liquid is heavier than water, a second 5g rider is placed on plummet hook, where it has value of 1. The other riders give the consecutive decimal places.

Ordering Information: Stainless-steel construction. With Reimann thermometer-plummet,

set of rider-weights, brass forceps, 8-530B cylinder, fiber case, directions.

2-150100.00

Reimann Thermometer with Plummet. FISHERbrand. Glass plummet with thermometer graduated from 10° to 30°C. Displaces 5g of water at 15°C. Total weight of plummet, wire, and metal hook, 15g.

2-15535.00

Rider-Weights. FISHERbrand. Set of 5 weights in four different sizes from 5, 0.5, 0.05, to 0.005g. An extra of the 5g weight.

2-16018.50

Cylinder. FISHERbrand. Heavy molded base and lip. 25dia x150mmH.

8-530B1.50

Doz lots, 10% discount

Chain Balance

For liquid densities from 0.0001 to 2.110

2-167

Chain gravitometer type balance determines specific gravity of liquid with high degree of accuracy. Utilizes both plummet displacement principle and chain weight system for weighings. No calculations or riders are needed.

Instrument is pre-balanced at zero reading by adjusting counter-balance weights. Plummet is immersed in liquid sample. Balance is zeroed again. Single roller-type weight is moved to notch on beam where equilibrium is approached; final adjustment is accomplished by raising or lowering one end of rhodium-plated bronze chain. Specific gravity is determined by adding rider and chain-support readings.

Ordering Information: Mounted on cast base with spirit level in center and adjustable platform for glass cylinder at right. With thermometer-plummet and 100ml glass cylinder.

2-167350.00

Thermometer-Plummet. Glass plummet with thermometer graduated from 10° to 30°C. 10g displacement at 20°C.

2-167-1040.00

Accessory for Solids. Perforated glass basket. For determining the specific gravity of solids. With platinum hangers and adjustable hook. For use with 2-167 chain balance.

2-167-1337.00

Fisher-Young Gravitometer

Measures rubber density

2-148

For determining the specific gravity of rubber and other solids insoluble in water. Readings from 0.90 to 10.00 are accurate to the second decimal place and can be estimated to the third decimal place, in the 0.90 to 2.50 range.

Sample is suspended from free end of balance beam. Beam weights are adjusted until pointer rests at infinity mark on scale. Beaker filled with water is placed on platform and sample is im-

mersed. Vibrator sets up a vibratory motion in balance to help reach equilibrium on scale. Specific gravity is read directly from scale.

Ordering Information: Mounted on wooden base; glass and wood case. With 250ml beaker, battery-operated vibrator, instructions.

2-148448.00

Batteries for operating vibrator are listed under 2-425 on page 15.

Water/Wastewater Testing?

The Fisher Water and Wastewater Analysis Methods Manual, with step-by-step procedures for over 40 current APHA and EPA tests, is yours for the asking. In easy-to-read form, this valuable handbook also contains illustrated descriptions of recommended equipment, reagent listings, handy reference tables, conversion factors. Includes latest instrumentation and test kits conforming to standard method requirements. A great help for anyone in the field. For your copy, just check no. 3 on reader service card at end of blue index pages

Cahn Digital Top-Loaders

Weigh up to 10 samples per minute
1000mg . . . Two models

Model DTL Millibalance

Precalibrated top-loading balance with digital display for weighing samples in two ranges (0 to 100mg and 0 to 1000mg) with 0.1mg sensitivity and readability.
Just select range. Adjust zero. And place container on pan. Set digital voltmeter to zero with tare control for taring up to 10g, then reset zero control. Then place sample in container. Unknown weight is balanced by torque produced by current in a coil in a magnetic field. Weight is indicated directly on the digital display in milligrams to 3 digits. If recorder is used, reading will be automatically recorded.
Model DTL is used for a variety of jobs in almost any environment without affecting its accuracy and reliability. Especially valuable in industrial applications involving quality assurance or production control since it interfaces directly with recorders, computers, calculators.

Ordering Information: With hinged transparent draft guard shield and calibration storage well. 23Lx23Wx28cmH. With 2 calibration weights, sample pan, forceps, instruction manual. Net wt 3.6 kg.
20-063-10 1770.00
(Cahn 7500)

Model RTL Millibalance

Same as Model DTL except with a digital counter that indicates sample weights.
Weighing ranges are 0 to 10, 0 to 100, and 0 to 1000mg. Sensitivity and readability are both 0.01mg.
Almost as fast as the DTL, the RTL weighs 5 to 10 samples per minute. The unknown sample is balanced by torque produced by current in a coil in a magnetic field. Coil current deflects meter which is nulled by a precision potentiometer. Sample weight is shown on digital counter on weight dial.

Ordering Information: With hinged transparent draft guard shield, calibration storage well, 3 calibration weights, sample pan, forceps, instruction manual. 23Lx23Wx18cmH. Net wt 3kg
20-063 1550.00
(Cahn 7000)

Roller Smith Dial-Reading Balance

1.5g capacity . . . 1mg accuracy

20-050

Inexpensive torsion type balance with 1500mg range. A three-compartment unit, consisting of large direct-reading dial section and two side areas for weighing hooks, mounted on a control panel.
Sample is placed on weighing hook in right compartment. Index lever on reading dial is moved to maximum scale range so that heavy samples will not overstress beam. Clamp lever is released. Weight is slowly reduced by moving index lever clockwise until balance pointer lines up.
Balance can be used to weigh samples from 500 to 1000mg, or 1000 to 1500mg, by adding 500 or 1000mg counterweights to the left hook. Dial is read by the first dial division that appears clockwise from zero on vernier. Vernier is read by first line on the vernier from zero that lines up with dial division. Readings to 0.2mg are possible with sensitivity of 2mg per division and accuracy of $\pm 0.2\%$.

Ordering Information: In metal cabinet, equipped with magnetic damping system, beam lock and release lever, micrometer zero adjustment. 15Lx33Wx25cmH. Can use weighing pans. With cover, carrying case, and 2 counterweights for extending range. Without pans.
20-050 415.00

Ten other models with ranges from 3 to 2000mg are available on special order.

Platform Balance

8 oz beam graduations

20-058D	20-058WD	10.00
20-058G	20-058WG	10.00

Portable scale with graduated beam for heavy general weighing up to 1000 lb (454 kg). Object to be weighed is placed on platform. Correct counterpoise weight is selected and suspended from beam. Poise is adjusted on beam, graduated in 8 oz (227g) increments up to 100 lb (45.4 kg).

Ordering Information: Platform: 46Lx69cmW. Metal pillar, four standard metal wheels, steel pivots. 91Lx64Wx112cmH. With counterpoise weights. Shipping wt 87.5 kg (193 lb).
2-117325.00

Voland 200g Analytical Balances . . . Two models:

1-915

Easy-to-use
Model 100R . . .
perfect for students

Ideal for educational and industrial labs to provide 0.1 mg accuracy for many applications which do not require more expensive balances.

Simple to use. Unknown sample is placed on one pan and counterweights are placed on the other. Single rider is adjusted on 16.5cm aluminum beam with 100 white graduations on each side of zero center. Direct readings are obtained to 0.1mg under full load.

Micro-Wedge® beam holds knives within extremely precise tolerance required without introducing stress in beam. Two intermediate knife-edges maintain load at fixed center regardless of its location on pan.

Ordering Information: In aluminum case with smooth, light gray finish, blue-green base. 24Lx41Wx47cmH. Horizontal sliding front and rear doors, polished agate knives and bearings, 3 point straight fallaway beam arrestment. Stainless-steel pans 6.4cm dia with hangers 10.5cm wide. With two 10mg riders but without weights. Shipping wt 15.9kg (35 lb).

1-915395.00

1-916

Model 220R
Digital-
Chainweight

With notched beam, chain attachment, with digital readout and damper. Rapid. Precise. No handling of small loose weights.

Determines sample weight above 1g in the same manner as Model 100R. For weights under 1.1g, chainweight with digital readout is used in 0.1mg increments through range of 0-100mg.

Calibrated rider carried by hook indicates weight steps of 0.1g up to total of 1g. When counterweights, rider reading, and chainweight reading are added, actual weight of the sample is determined. Precision, ±0.2mg.

Ordering Information: In aluminum case finished in light gray with blue-green aluminum base. 24Lx41Wx47cmH. Horizontal sliding front and rear doors, damping system, Micro-Wedge beam, agate bearings and knife-edges, 3 point straight fallaway beam arrestment. Stainless-steel pan 6.4cm dia with hangers 10.5cm wide. With rider but without weights. Shipping wt 15.9kg (35 lb)

1-916495.00

Student Balance Weights, see 2-224 and 2-224-5 on page 56

Single Hanging-Pan Balances

2-021

Ohaus Cent-O-Gram, Model 311

Single hanging-pan balance with 311g weighing capacity, sensitive to 0.01g. Most popular weighing equipment for science and education. Readings are taken from balance's four beams. After sample is placed on pan, slide weights are adjusted. Front beam is graduated to 1g in 0.01g divisions; second beam, to 10g in 1g divisions; third beam, to 100g in 10g divisions; rear beam, to 200g in 100g divisions.

Ordering Information: With magnetic damping, specific gravity stand, zero adjustment knob. Stainless-steel weighing pan, with handle and 2 pouring spouts, 9.2dia x 1.3cm deep.

2-02166.00

Balance Cover. For 2-021 balance.

2-021-102.50
(Ohaus 110)

2-021-5

Ohaus Dec-O-Gram, Model 3600

Triple-beam balance with 0.05g sensitivity. Weigh to 2610g by adding weights. Beams are graduated to 610g in 0.1g increments. With magnetic damping, specific gravity stand, clearly graduated beams, two 1000g and one 500g attachment weights. Over-size pan for weighing containers up to 15cm in dia and up to 19cm high.

2-021-585.00

2-020-10

Ohaus Dial-O-Gram, Model 310

310g capacity. Single hanging-pan double-beam balance with damping system utilizing "Alnico" magnets. No arrestment needed between weighing operations or leveling. Standard in classroom and labs throughout world.

Weight of sample is found by adjusting slide weights on beams and rotating an engraved dial. Rear beam is graduated to 200g in 100g increments; front beam, to 100g in 10g increments. Dial is calibrated to 10g in 0.1g divisions, with vernier reading to 0.01g.

Ordering Information: Includes stainless-steel pan with handle and 2 pouring spouts, 9.2dia x 1.3cm deep. Specific gravity stand built into base.

2-020-1082.50

1-915-50

Torsion Model ST-1

A single hanging-pan double beam balance with no-knife-edge construction. Thus it's unaffected by dust, dirt, or rugged student use.

Weight readings up to 310g with readability to 0.01g. Place sample on pan. Push slide weights to appropriate weight notches on rear beam (0 to 200g in 100g increments) and on front beam (0 to 100g in 10g increments). Move dial over 0 to 10g range in 0.1g increments to right amounts, and read vernier weight to 10mg.

Ordering Information: Silicone fluid damper. No arrestment mechanism. Stainless-steel 12.7cm pan with 18cm C-shaped bow. 36Lx13Wx33cmH. Net wt 3.2kg.

1-915-50105.00

Ohaus Triple-Beam Balances

Model 710

A top-loading triple-beam balance with 610g capacity and 0.1g sensitivity. Magnetic damping. Great for fast weighings.

Place sample on pan. Read sliding weights on beams. Front beam is graduated from 0 to 10g in 0.1g divisions; center beam, from 0 to 500g in 100g divisions; rear beam, from 0 to 100g in 10g divisions.

Ordering Information

Model 710 Balance. Corrosion-resistant; die-cast aluminum alloy box end beam, graduations in black on white background, 15.2cm weighing pan. Self-aligning agate bearings, precision-ground steel knife-edges. Zinc die-cast base, contoured to hold 2-034-8 attachment weights.

2-03257.50

Model 710T, with Tare Beam and Weight. Same as Model 710 except has 225g capacity tare beam for direct reading of net weight.

2-032-2065.00

Model 760, with Tare Beam, Weight, Flat Plate. Same as Model 710T except with 15.2cm flat stainless-steel plate instead of weighing pan. Taring capacity, 225g.

2-034-2055.00

Model 720, with Removable Scoop. Same as Model 710 but has a removable polypropylene scoop, 30Lx15Wx7cmH.

2-032-3063.50

Model 750S, with Flat Plate. Same as Model 710 but with flat stainless-steel plate in place of weighing pan.

2-03447.50

Model 730, with Animal Cage. Same as Model 710 but with perforated aluminum animal cage, 23dia x15cm deep.

2-034-2571.50

Attachment weight set. Use with Ohaus triple-beam balances to increase capacity to 2610g. Consists of two 1000g weights and one 500g weight.

2-034-812.50
(Ohaus 707)

Fisher Scientific Company

2-034-25

Avoirdupois Balance, Model 860

Same as Model 710 but with beam capacity 1 lb, 2 oz (510g), and with flat 15.2cm stainless-steel plate. Sensitivity 0.01 oz (0.3g). 8 oz (227g) tare beam with sliding poise. Front beam 0-1 oz in 1/64 oz divisions. Center 0-16 oz in 1 oz. Rear 0-1 oz in 0.01 oz.

2-034-1663.50

Attachment weight set. For use with Model 860 to increase capacity of balance to 5 lb, 2 oz (2.3kg). Set consists of two 2-lb and one 1-lb weights.

2-034-1912.50
(Ohaus 807)

Polypropylene scoop with counterweight. For all above triple-beam balances. 30Lx15Wx7cmH.

2-041-514.00
(Ohaus 703)

Dust cover. Vinyl plastic. For triple-beam balances.

2-034-602.50
(Ohaus 706)

Ohaus Double Hanging-Pan Balance Heavy-duty Model 1600

Even-arm balance. 2000g capacity. 0.05g sensitivity. For classroom or laboratory.

Beam graduated from 0 to 10g in 0.1g divisions. Stainless-steel 15.2cm pans with 19cm bow clearance. Steel knife-edges, polished agate bearings, spirit level, adjustable specific gravity platform. Finished in sandtone epoxy. Without weights.

1-997100.00

For weights, see 2-301 and 2-301-5 on p 57.

1-997

Dial-O-Gram Platform Balances

2610g capacity
Smooth dialing of weight
from 0.1g to 10g

2-034-30

Dial-O-Gram Model 1650. Weighs samples from 0 to 2610g with 225g of taring. Readable to 0.1g.

For weighing to 610g, sample is placed on plate. Sliding poises are adjusted on front beam, graduated to 500g in 100g divisions, and rear beam, graduated to 100g to 10g divisions. Then dial, graduated to 10g in 0.1g divisions, is adjusted. Sample weight is sum of the beam and dial readings.

For weighings over 610g to 2610g, supplied weights in 500g increments are added to beam. After the weights are added, beam poises are moved to correct position and dial is adjusted to determine final gram results.

Ordering Information

Model 1650 Balance. Die-cast aluminum beam with strong cross-braced ends. Tare beam, magnetic damping. Agate bearings, steel knives, 15.2cm stainless-steel weighing plate, die-cast zinc base finished in corrosion-resistant epoxy. With 2000g add-on weight set.
2-034-3080.00

Model 1610 Balance. Same as Model 1650 but with stainless-steel weighing pan instead of weighing plate. Pan: 15.2dia x1.9cm deep.
2-034-3588.00

Model 1620 Balance. Same as Model 1650 but with 30Lx15Wx7cmH polypropylene scoop in place of the weighing plate.
2-034-4094.00

Model 1630 Balance. Same as Model 1650 but with perforated aluminum animal subject box replacing the weighing plate. Box 23 dia x15cm deep.
2-034-45100.00

Footed stainless-steel scoops. For 2-034-30 (Model 1650) or 2-034-35 (Model 1610). 30Lx15Wx7cmH
2-034-5016.10
(Ohaus 1078-03)

Polypropylene scoop. Same as above scoop but made of polypropylene. 30Lx15Wx7cmH.
2-034-5111.00
(Ohaus 1101)

Ohaus Autogram 1000 Balance

1-914-50

A two-pan balance with semi-automatic weight loading device. Weigh up to 100g optically and up to 900 grams more with a weight loading device.

For weighings to 100g, place the sample on the left pan and read the results to 0.1g on an optically projected scale over -3 to +103g range, with $\pm 0.05g$ precision. For samples over 100g, add nine fingertip-controlled weights to the right pan in 100g increments. Each weight is manually moved from the weight rack to the load receiver until the correct amount has been added. After the reading is taken, the weights are returned to the storage rack, by lifting the weight receiver.

Up to 200g tare is controlled by front mounted dial knob. More than 200g of taring is accomplished by adding weights to the right-hand pan.

Ordering Information: Functional modern case of stainless-steel, with cast-aluminum base, knife-edge beam, self-aligning agate bearings, coated front-surface mirrors. 38Lx22Wx23cmH. With plastic cover, spare projection lamp, illuminated push switch. Shipping wt 7.7kg (17 lb). 115V 50/60Hz.

1-914-50495.00

Projection lamp. Operates on 6V.
1-914-52Ea/3.50
Case of 10/31.50

Ohaus Solution Balance

2 beams read to 1100g in 1g increments

2-100D

Ohaus Model 1119D. For high capacity solution weighings up to 20kg with 1g sensitivity. Animals, plants, chemicals, coal samples can be easily weighed on balance, too.

Empty container is placed on weighing platform. Poise on undivided tare beam is adjusted to counterbalance container weight up to 2270g. Solution is poured into the container. Riders are positioned on two weighing beams. Readings are taken from rear beam, graduated to 1000g in 100g divisions, and front beam graduated to 100g in 1g divisions.

Ordering Information: Heavy cast-aluminum construction with magnetic damping. Stainless-steel 28cm platform, with Beranger construction. Positive load stops prevent knife-edge damage. End-reading device readable from either side. With weights from 1 to 10kg on handy weight rack.

2-100D275.00

Ohaus Harvard Trip Balances

2-035-SD
Model 1450SD

Magnetic damping . . . fast . . . convenient

Model 1450SD. A Harvard Trip Balance with a single beam and two 15.2cm stainless-steel weighing plates. Weighings up to 2000g with sensitivity to 0.1g are easily accomplished.

Weights are used for loads up to 1990g. Beam with sliding rider is used for final 10g, readable to nearest 0.1g.

Rugged construction; self-aligning agate bearings with dustproof covers; precision-ground steel knife-edges. Without weights.

2-035SD50.00

Model 1454SD Balance. Same as 2-035SD except with dual-scale beam with calibrations in grams and ounces. Beam is graduated to 1 oz in 0.01 oz and 28.4g in 0.2g. Capacity, 2000g (4.4 lb).

2-035-10SD55.00

Model 1410SD Balance. With Single Beam and Pan. Same as 2-035SD except with stainless-steel pans 15.2cm dia and 1.9cm deep.

2-052D64.00

2-053 Model 2060 with Dial-Type Readout

2-037-SD
Model 1550SD

Model 1550SD Balance. With Double Beam. Same as 2-035SD but with double beam. Upper beam is graduated from 0 to 10g in 0.1g divisions; lower beam is graduated from 0 to 200g in 10g divisions.

2-037SD56.00

Model 1560SD Balance. With Double Beam and Tare Capacity. Same as 2-037SD but with taring to 225g.

2-037-10SD64.00

Model 1520D Balance. With Double Beam and Scoop. Same as 2-037SD except with polypropylene scoop, 30Lx15Wx7cmH.

2-042-5D72.00

Model 1510D Balance. With Double Beam and Pan. Same as 2-037SD except with two stainless-steel pans, 15.2dia x1.9cm deep.

2-052-5D70.00

Model 2060 Balance. With Dial-Type Readout and Tare Capacity. Same as 2-035SD except has a dial-type vernier readout and 225g tare capacity. Dial is graduated to 100g in 1.0g divisions; vernier is graduated to 1g in 0.1g divisions. Engraving technique eliminates possibility of error in registration between circle of graduation pattern and circle of outside diameter of dial. With 15.2cm stainless-steel plates.

2-05374.00

Model 2010 Balance. With Dial-Type Readout, Tare Capacity, and Pan. Same as Model 2060, except has stainless-steel weighing pans 15.2cm dia and 1.9cm deep.

2-05490.00

Accessories for Harvard Trip Balances

Cover, transparent plastic. Used to cover Harvard Trip Balances and apparatus of similar size. Bound with cloth at edges. Loop for hanging when not in use. 18Lx41Wx18cmH.

2-0392.25

Polypropylene Scoop and Brass Counterweight. For weighing powder or granular samples on Harvard Trip Balances. Scoop: 30Lx15Wx7.6cmH.

2-04114.00
(Ohaus 107)

2-041

Torbal Precision Balances

Weighing dial and magnetic damping cut weighing time

Model DLM-2 Balance

A two pan balance with weighing dial graduated to 1g. Accurate weighings are obtained quickly without time-consuming process of arresting balance. Capacity, 120g. Accuracy, 5mg. Readable to 2mg. After sample is placed on pan, gram weights are put on opposite pan. Dial, graduated to 1.0g in 0.01g divisions, is then adjusted. Sample weight is sum of gram weights on pan and dial reading.

Ordering Information: Metal case with hinged cover with glass front and top. Magnetically damped. 15Lx29Wx21cmH. Stainless-steel 7.9cm weighing pans. Without weights.
2-089265.00

Model DLM-5 Balance

Same as Model DLM-2 but has a 500g capacity with 50mg accuracy. Dial is graduated to 10g in 0.1g divisions. Dial weight from 20mg to 10g. **Ordering Information:** Metal case finished in corrosion resistant gray enamel. 15Lx30Wx17cmH. With stainless-steel 12.7cm weighing pan, but without weights and glass hinged cover.
2-089-10245.00

Model DRx-2 Balance

Same as Model DLM-2 in appearance and style except it has a dial graduated in both grams and grains. Dial is calibrated to 15 grains in 1/8 grain divisions and to 1g in 0.01g divisions. Total capacity is 120g (4 oz); sensitivity, 2mg (1/32 grain). Dial from 2mg to 1g, 1/32 to 15 grains. NBS Class A. **Ordering Information:** Metal case with glass hinged cover. 17Lx29Wx21cmH. Magnetically damped. With stainless-steel 7.9cm weighing pans. Without weights. Shipping wt 6.8kg (15 lb).
2-089-80210.00

Torbal Dual Dial Balances

Five times faster than graduated beam balances

Model DWM-5 Balance

A two pan balance with a graduated dial and weight loader for determining weighings to 10g. Total capacity is 500g with readability to 20mg and accuracy to 50mg. Sample is placed on pan. Gram weights over 100g are added to opposite pan. Weight loader, graduated to 90g in 10g units, is dialed to approx amount. Dial, graduated to 10g in 0.1g divisions, is then adjusted to exact amount. Sample weight is sum of dial readings and gram weights on pan.

Ordering Information: Finished in corrosion-resistant gray enamel. 15Lx30Wx17cmH. Magnetically damped. Stainless-steel 12.7cm weighing pan. Without weight set. (See 2-089-52.) Shipping wt 6.4kg (14 lb).
2-089-50275.00

Balance Weights. For use with the 2-089-50 balance (Model DWM-5). Consists of one 200g and two 100g weights.
2-089-52Set/9.50

Model DWM-3V Balance

Same as Model DWM-5 but has total capacity of 200g with readability and accuracy to 10mg. Weight loading dial graduated to 90g in 10g divisions. Fine weighing dial is graduated to 10g in 0.1g divisions and has a vernier readable to ± 10 mg. **Ordering Information:** In metal case without cover. 15Lx30Wx18cmH. With stainless-steel 8.9cm weighing pan. Without 100g weight. (See 2-089-57.)
2-089-55305.00

Balance Weight. For use with 2-089-55 balance (Model DWM-3V). Consists of one 100g weight in block.
2-089-572.75

Model DWM-2 Balance

Same as Model DWM-5 but has total capacity of 120g with readability to 2mg and accuracy to 5mg. Dial is graduated to 1.0g in 0.01g divisions; weight loader dial is graduated to 9g in 1g divisions. **Ordering Information:** In metal case with hinged cover. Magnetically damped. 15Lx29Wx21cmH. With stainless-steel 7.9cm weighing pans. Without weight set. Shipping wt 7.3kg (16 lb).
2-089-60295.00
Balance Weights. For use with 2-089-60 balance (Model DWM-2). Consists of 50, 30, 20, and 10g weights.
2-089-66Set 7.00

Torbal Torsion Balances

Heavy-duty suspension . . . accurate

2-075-15

Model DH-2a

A 2kg capacity two pan balance with notched beam and graduated dial. Sensitivity: 0.07g. Operates in corrosive or dust-laden atmosphere with no loss of accuracy.

Place sample on left-hand pan. Add weights to other pan in multiples of 100g. Adjust beam poise over 100g range in 10g increments. Final adjustment with dial, graduated to 10g in 0.1g increments. Result is sum of weights in pan plus beam and dial readings.

Ordering Information: In metal case with smooth chemically resistant gray finish. Torbal torsion bands. Silicone fluid damping. Arrestment. 22Lx41Wx28cmH. Supplied without weights or pans. Net wt 9.1 kg; shipping wt 13.6 kg (30 lb).

2-075-15295.00

2-066

Model IL-11 Balance

A two pan balance that provides maximum accuracy in high-capacity weighings with minimum maintenance. 4½kg capacity. 0.1g sensitivity.

After the sample is placed on the pan, gram weights are placed in the other pan and the rider is adjusted on the beam, graduated to 100g in 10g divisions. Dial, graduated to 10g in 0.1g divisions, is turned to exact amount. Readings are taken from the beam and dial.

Ordering Information: With silicone fluid damping, positive arrest mechanism, stationary indicator. Index plate graduated with 5 divisions on each side of the center. Metal case with smooth chemically resistant gray finish. 41Lx22Wx28cmH. Without weights or pans.

2-066310.00

Pans. Stainless steel. With pan holders. For 2-066, 2-075-15.

2-075-25, 15.2cm dia.Pr/32.00

2-075-40, 22.9cm dia.Pr/32.00

Fisher Scientific Company

Counter Scale

Handles weighings to 5kg/11 lb

2-116

Direct-reading counter scale handles objects to 500g or 17.6 oz. Read weights directly on fan-shape scale graduated in 1g and ½ oz divisions. Heavier weighings up to 5000g or 11 lb can be made by using sliding poise on beam. Sensitivity: 1g.

Container weight is tared off by using sliding poise to bring pointer back to zero. Sample is added to container on platform. Pointer advances to proper weight on scale, then stops there with very little oscillation.

Ordering Information: With adjustable built-in oil dashpot damper. Platform: 25.4cm. Notched beam engraved at 500g and 1 lb divisions. Baked enamel finish. 58Lx25Wx53cmH. With leveling feet and instructions. Shipping wt 20.4kg (45 lb).

2-116390.00

Ohaus Industrial Lab Balance

Capacity 5kg, sensitivity 0.5g

Beam reads to 1000g in 0.5g

2-097-5

Model 1900. A heavy-duty even-arm balance with micrometer type poise. Capacity, 5000g. Loose weights not needed below beam range of 1000g. Beam graduated in 10g divisions. Readings to nearest 0.5g by rotating the sliding micrometer poise.

Equipped for fast repetitive weighings, with 450g tare beam range and magnetic damping. Undivided tare beam has 2 sliding poises for coarse and fine adjustment.

Beam mechanism, enclosed in corrosion-resistant cover of fiberglass-reinforced polyester, withstands plant use.

Poise indicator protectively housed at left end of balance. Smooth-surfaced stainless-steel weighing platforms are easy to clean. Sample platform is 20cm square, weight platform is 15x20cm.

Ordering Information: With braced box-end beam, self-aligning agate bearings, precision ground knives. Up to 4 kilo weights required to weigh to capacity.

2-097-5275.00

Footed Metal Scoop with Counterweight. For 2-097-5. 39Lx22Wx11cmH.

2-097-760.00
(Ohaus 131)

Ohaus Check-O-Gram Avoirdupois Counter Scales

For over-under checkweighing

For classifying products by weight, separating underweight containers, pre-determined checkweighing.
Place sample on platform. Place appropriate counterweights on opposite platform. Slide poise to correct position. Sample weight is sum of counterweights and poise reading. For checkweighing, leave appropriate counterweights on platform and set poise to correct amount. Place sample on other platform. Zero indicator shows on an ounce scale the amount sample is over or under set weight.

Ordering Information: Fiberglass reinforced polyester housing. Stainless-steel platforms. Ground hardened knife-edges and agate bearings. Magnetically damped. Tower is rotatable 360° for viewing over/under scale from any direction. Over-all dimensions 22Lx52Wx47cmH.

Two models offered:

Model	Capac	O-U Scale X Divisions	Beam Scale X Divisions	Cat. No.	Ea
8800	5 lb (2.3kg)	1 oz x 1/16	8 oz x 1/8	2-135	395.00
8810	10 (4.5)	2x1/8	16x1/4	2-136	395.00

Counter scales with metric unit graduations are available on special order.

Platform
Balance

See 2-117 on page 43

Utility Counter Scale

Weigh up to 110 lb (50kg)

This counter scale consists of a large weighing platform with full capacity aluminum beam. Quick weighings up to 110 lb (49.9kg). Simply place object on platform and adjust poises on bars. Upper bar is graduated to 10 lb (4.54 kg) in 1 oz (28.4g) divisions; lower bar, to 100 lb (45.4 kg) in 10 lb (4.54kg) divisions. Weight is read from either side of scale.

Ordering Information: Platform: 30Lx33cmW. Over-all: 47Lx 42Wx45cmH. Shipping wt 24.5 kg (54 lb).
2-114300.00

Other capacities are available on special order.

Dial Scales

English and metric models

100 lb in 2 oz
increments:

A direct-reading counter scale ideal for stockroom where routine weighings and dispensings are done. Capacity is 100 lb (45.4 kg) with scale graduated in 2 oz (56.7g) divisions. Tare capacity up to 20% of full range.

Ordering Information: With cast-iron base and cast-aluminum head. Brushed aluminum dial face with large vertical numbers. Adjustable hydraulic dashpot; friction-free check rods; variable position shelf lever; four precision knife-edges. 46Lx39Wx77cmH.
2-120595.00

Metric Dial Scale

50 kg in 100g increments

Direct-reading counter scale same as 2-120, except graduated in metric units. Capacity is 50 kg with scale graduated in 100g divisions.
2-122544.00

Ohaus Moisture Balances

Choice of 4 models

Projection Models 6010, 6100, 6010PC
read directly in % moisture loss and grams

1-950-20

Model 6010

Specially designed, magnetically damped precision balance of 10g capacity with built-in infrared heater. Recommended for moisture determinations of aqueous solutions, adhesives, asphalt, cereals, chemicals, detergents, fertilizers, leather, paints, paper, plastic, soils.

Sample is placed on the pan. Sample container can be tared off to 5g. The infrared lamp is adjusted over the pan; heat is adjusted within the range 0-375w for a time interval between 1 and 60 min. A signal bell sounds when the pre-set timer automatically shuts off the heat. Throughout the drying cycle, decreases in weight can be read simultaneously on a reticle graduated in grams over a 10g range to 0.01g. Percent of moisture can be read simultaneously on same reticle over a 100% range to 0.1%.

Ordering Information: Compact unit size: 22Lx37Wx43cmH. With spare 1-914-52 projection lamp, one box of 1-950-5 weighing dishes. Shipping wt 13.6kg (30 lb). 115V 50/60Hz.

1-950-20495.00

Model 6100

Same as 1-950-20 except has 100g capacity and 0.1g readability over 100g optical range.

1-950-23495.00

Triple-Beam Model 770

Inexpensive model with % moisture calculator

Moisture Determination System Model 770 is a specially modified 610g capacity balance with fully adjustable heating unit, percentage moisture calculator, and 200g tare range. For use where control of moisture content is important but the budget is tight.

Ordering Information: With heating unit, calculator, 250w lamp with 50° to 120°C range, 375w lamp with 120° to 270°C range. With instruction manual including charts showing temperature on sample, with either lamp set at various heights. 115V 50/60 Hz.

1-950-25175.00

1-951

Model 6010PC for Sewage Plants

Ohaus Moisture Balance Model 6010PC (Pollution Control) is designed for rapid testing of sludge solids, sludge volatiles, filter cake solids, volatiles. It replaces these six pieces of apparatus frequently used in sewage plants: analytical balance, weights, bird bath heater, drying oven, muffle furnace, and desiccator.

Model 6010PC has a capacity of 10g with $\pm 5g$ of taring. Decrease in weight over a 10g range with 0.01g sensitivity and percent moisture loss over a 100% range with 0.1% sensitivity can be read simultaneously.

Heat intensity and timer controls are located on top of balance housing. Heating unit is a built-in standard tungsten filament infrared lamp that adjusts vertically, swivels for safety, and provides heat from 0-500w. Timer has settings from 1-60 minutes, a signal bell, and automatic heater shut-off.

Ordering Information: With magnetic damping. 22Lx37Wx43cmH. With one pk of 1-951-5 weighing dishes. Shipping wt 13.6kg (30 lb). 115V 50/60 Hz.

1-951625.00

Weighing dishes. Disposable, aluminum, 12cm dia, 0.5cm deep.

Balances, Scales, and Accessories

Diet Kitchen Balance

Weighs meal portions without calculations. Light dish is placed on platform. Dish weight is tared off by turning front dial that brings scale back to zero. Food is added and scale is read up to 500g in 1g divisions. Dial can be set back to zero again and another portion of food can be added.
Metal structure finished in white enamel with 16.5cm dial. 16Lx17Wx24cmH. FISHERbrand®.
2-17320.50

Prescription Balance

Portable balance on a wooden base has 2 hanging pans suspended from beam. Light weighings up to 100g with 0.01g sensitivity are easy. Pan dia, 6.3cm. Beam L, 17.8cm.
2-173-4544.00
For student weights, see 2-276 on p 57.

School Balance

Ohaus Model 1200. Rugged unit for teaching basic science. Inexpensive balance for teaching science in early grades. Two color-coded polystyrene weighing pans, zero adjustment wheel, manual damping arrest, rugged die-cast aluminum beam, recessed indicator. With brass weight set from 1 to 50g.
2-17425.00

Pull-Spring Scales

Choice of three models:
(1) 250 grams/9 oz
Inexpensive spring balance graduated to 9 oz in 1/4 oz divisions and to 250g in 10g divisions. With top ring and bottom hook.
2-1103.00
(2) 2000 grams/72 oz
Similar to 2-110 but has scale graduated to 72 oz in 1 oz divisions and to 2000g in 25g divisions.
2-1113.00

(3) 10 pounds
Cylindrical type, for fairly heavy weighings. Scale graduated to 10 lb (4.5kg) in 1/4 lb (113g) divisions. Spring made of alloy steel.
2-11317.00

Fisher Vibradamp® Balance Support

Absorbs vibration . . . for balances or other sensitive apparatus

A heavy metal base on which to set analytical balances or sensitive instruments for low vibration operation. Equipped with special anti-vibration feet, it accepts objects weighing up to 27kg.
Solid 25kg casting support finished in brown enamel. 55Lx29cmW. Compressed fiberglass feet, 5cm sq.
1-994105.00

Balance Rests

Handle minor vibrations

Place under leveling feet of analytical balances to eliminate small vibrations. Made of Bakelite mounted on sponge rubber.
2-176Set of 4/5.00

2-176

Marble Table

FISHERbrand® balance table diminishes effects of floor vibrations. Weighs over 318kg and is made of 7.6cm thick white Vermont marble slabs. Heavy iron pipe with flanges holds table supports. 89Lx61Wx79cmH. Shipping wt 340kg (750 lb).

1-994-100277.00
FOB Center Rutland, VT

Marble Slab

For use on laboratory furniture. Substantially reduces vibration where balance table cannot be used. 33Lx51Wx5.7cm thick. Net wt 22.7kg.

1-994-10560.00
FOB Center Rutland, VT

Silica Gel Desiccator

FISHERbrand balance desiccator consists of a perforated can 7 cm in dia filled with silica gel drying agent. Easily placed in balance chamber to adsorb moisture. Window in can shows color of silica gel. When gel has faded, can should be heated to 150°C until dark blue color is restored.

1-952-54.00
Lots of 12/10% discount

Balance Desiccator

Maintains a dry atmosphere in balance chambers. Absorbs up to 10g of water vapor. Consists of perforated aluminum can with 150g charge of Drierite (anhydrous calcium sulfate). After can is exhausted, it can be regenerated by heating it at 200°C for one hr. 3.8 dia x15.2cmH.

1-9524.50
Case of 12/48.00

For Drierite, see p 206.

Plastic Dust Cover

For analytical balances. Transparent plastic. Cover bound with plastic at edges. 25Lx48Wx46cmH. Convenient loop for hanging.

1-9925.00
Lots of 6/10% discount

Weight Forceps

FISHERbrand. Balance weight forceps made of nylon reinforced with fiberglass. Plastic tips with small grooves near end for cradling knob of weight during transfer. Insoluble in ethanol, won't warp with use.

2-354Pk of 12/12.60
Case of 144/136.00

Weighing Funnels

14-353
Borosilicate glass funnels with tapered pouring necks, aid micro-transfer of solids, liquids. No rocking or moving while weighing; flat bottom keeps funnel steady while on balance. Use in temperatures to 454°C.

Dia x L	Cat. No.	Pk of 5
10x35mm	14-353A	12.00

Permas® Balance Weights

Laboratory reference standard and analytical grades

Permas Balance Weights for Class S, S-1, and P tolerances are fundamental tools for analytical and pan balances. From reference standards in highly precise laboratory work to general student weighings, these weights provide accuracy and permanence needed.

Permas Weights, so called because of their permanent mass, are offered in gram weights (more than 1g) and fractional weights (less than 1g). Gram weights are manufactured from non-magnetic stainless steel, and are over 50% non-ferrous. High in nickel and chromium content, these weights are extremely corrosion-resistant and hard. They must be cut and shaped with tungsten carbide tools. The 10 and 20mg fractional weights are made of aluminum; the 50 to 500mg fractional weights are made of corrosion-resistant tantalum.

Base of each weight is concave to expose minimum surface area to wear and abrasion. Heads of the weights are broad enough to ensure convenient nonslip grip by forceps.

All weights meet exacting individual and group tolerances for their class established by the National Bureau of Standards in Circular 547 and traceability requirements established by MIL-C-45662. (See table of these tolerances on page 56.)

Each set of weights is packaged in a sealed plastic box. Weight box has a nameplate with a serial number. Additional label shows class maximum and minimum size weight, approximate density and composition.

Complete 50g set* includes these fractionals:

one 10mg	one 100mg
two 20	two 200
one 50	one 500

these gram weights:

one 1g	one 10g
two 2	two 20
one 5	one 50

Complete 100g set*. Same as 50g set except includes one 100g weight.

*Each set includes a plastic forceps. (See ordering information on pages 55 and 56.)

Class S Weights

For reference standards in high-precision analytical work

2-214

Ordering Information

Complete sets. Set of grams and fractions meeting Class S standards. Includes units in table on preceding page.

2-214A50g, set/167.00
2-214B100g, set/184.00

Gram weights only. (See table on preceding page.) Used with analytical balances which don't require weights smaller than 1g.

2-216A50g, set/121.00
2-216B100g, set/136.00

Certified by Fisher. Similar to 2-214 series except this set has been certified by Fisher. Tolerance limits have been established by carefully checking each weight and set against a set calibrated by NBS. With certificate giving test set number for traceability purposes and correction for each weight, if any.

2-219100g, set/540.00

Single gram weights. Same gram weights as in 2-214 series.

Gram	Cat. No.	Ea
1	2-219-10A	10.75
2	2-219-10B	11.00
5	2-219-10C	11.30

20	2-221-10E	11.80
50	2-221-10F	14.20
100	2-221-10G	16.00

Single fractional weights. Same fractional weights as in 2-221 series.

Mg	Cat. No.	Ea
10	2-221-20A	5.80
20	2-221-20B	6.00
50	2-221-20C	6.30
100	2-221-20D	6.30
200	2-221-20E	6.50
500	2-221-20F	6.85

NBS Calibration

National Bureau of Standards will calibrate weights for ultimate user, only if critical for national scientific operations and if suitable testing facilities are not available elsewhere. Weights for such calibration and testing should be sent to National Bureau of Standards, Attention: Mass and Volume Section, 2.06, Washington, DC 20025.

Fisher Scientific will replace without charge any set under series 2-214, 2-216, and 2-219 if it is not accepted by the NBS for calibration or testing because of unsuitability for use as a reference standard.

Permas[®]
Class P
Weights

For student and
routine use

Complete sets. Set of gram and fractional weights meeting Class P standards. Includes weights in table on page 54.

10mg to 50g.
2-224ASet/142.00

10mg to 100g.
2-224BSet/150.00

Gram weights only. (See table on page 54.) Used with student chain attachment balances which don't require weights smaller than 1g.

1g to 50g.
2-224-5ASet/104.00

1g to 100g.
2-224-5BSet/118.00

1	.014		.025	.050

Class-S Weights
(See table above)

Set of 21 pieces conforming to the tolerances for Class-S. Set consists of 12 fractional weights: 1 - 2 - 3 - 5 - 10 - 20 - 30 - 50 - 100 - 200 - 300 - 500mg; and 9 rhodium-plated bronze gram weights: 1 - 2 - 3 - 5 - 10 - 20 - 30 - 50 - 100g. Fractional weights from 30 to 500mg are tantalum; fractional weights from 1 to 20mg, aluminum. Gram weights have large diameter bodies and long slender handles. In plastic case. With nylon forceps. 2-231Set/175.00

Ohaus Class-P Weights:
10mg to 100g Set

Class-P set ideal for student analytical balances. Packaged in a velvet padded polypropylene Sto-A-Weigh box. Set of 17 pieces consisting of these 8 fractional weights: 10 - 20 - 30 - 50 - 100 - 200 - 300 - 500mg; and these 9 stainless-steel gram weights: 1 - 2 - 3 - 5 - 10 - 20 - 30 - 50 - 100g. Fractional weights 10 to 30mg are aluminum and 50 to 500mg are stainless-steel. With forceps. 2-262-5BSet/80.00

Ohaus Class-F Weights:
1/16 oz to 2 lb set

12-piece set of 1/16 oz to 2 lb (1.77g to 907g). Consists of these brass weights: 1/16 - 1/16 - 1/8 - 1/4 - 1/2 - 1/2 - 1-2-4-8oz; 1 lb, 2 lb. These are NBS Class F field weights, used by servicemen. In hinged polypropylene box. 2-312-1052.00

Ohaus IOLM Standard Weights

For routine weighings. Tolerances developed by the International Organization for Legal Metrology (see table on preceding page).

Gram Weight Sets

2-301

Gram Weight Sets in Hinged Case

2-301-5C

Weight Set: 10mg to 100g

2-301-5B

IOLM Standard brass weights. Suitable for laboratory or stock-room use in dispensing chemicals. Two sets offered. Each includes these 12 weights: 1 - 2 - 2 - 5 - 10 - 10 - 20 - 50 - 100 - 100 - 200 - 500g. In addition, the 1 to 1000g set includes a 1000g weight. Both sets are without fractional weights or forceps. Each set comes in a plastic block with drilled holes that accept individual weights.

Set Range	Weights in Set	Cat. No.	Set
1 to 500g	12	2-301A	20.00
1 to 1000	13	2-301B	36.00

IOLM Standard brass weights in polypropylene case with hinged cover. Three sets offered. Each includes these 12 weights: 1 - 2 - 2 - 5 - 10 - 10 - 20 - 50 - 100 - 200 - 200 - 500g. In addition, the 1 to 1000g set includes a 1000g weight. The 1 to 2000g set includes one 1000g and one 2000g weight. Without fractional weights or forceps.

Set Range	Weights in Set	Cat. No.	Set
1 to 500g	12	2-301-5C	24.00
1 to 1000	13	2-301-5D	40.00
1 to 2000	14	2-301-5E	70.00

Set of Fractionals: 1 to 500mg

Consists of 12 aluminum fractional weights: 1-2-2-5-10-20-20-50-100-200-200-500mg. (NBS Class C tolerances, ranging from ± 1.5 mg for 500mg, to ± 0.04 mg for 1mg.) In hinged Sto-A-Weigh polypropylene box. With forceps. **2-278**Set/4.00

Gram Weights

Individual IOLM standard brass weights.

2-276

Student Weight Set: 10mg to 50g

This 16-piece IOLM Standard set consists of 8 aluminum fractional weights: 10 - 20 - 20 - 50 - 100 - 200 - 200 - 500mg; and 8 brass gram weights: 1 - 2 - 2 - 5 - 10 - 10 - 20 - 50g. With stainless-steel forceps in polypropylene case. **2-276**Set/5.00

Ohaus Hook-On Weights: 10 to 1000g Set

Ohaus student quality weight set, Class-T (see table previous page). Consists of 9 weights: 10-20-20-50-100-200-200-500-1000g. In plastic block. Weights are of steel and brass, with sliding hook through center. Can be hooked together at top or bottom. **2-314**Set/26.00

2-314

Ohaus Slotted Weights: 10 to 500g Set

2-316

Student-quality weight set, Class-T (see table previous page). Consists of 8 brass weights: 10-20-20-50-100-200-200-500g. On cast-aluminum rack. Weights are slotted for use on weight hanger. **2-316**Set/21.50

Balance Weight Hanger

For hanging 2-316 Slotted Weights. Net wt. 50g. **2-318**1.85

Balance Riders

Meet Class S standards for weighing. Aluminum.

The Fisher Guarantee

The Fisher Scientific Company guarantees that each article which it furnishes will conform to the specification given in this book, or that of a further improved model.

Mercury Barometers

Highest accuracy in atmospheric pressure measurement

U.S. Signal Corps Model

NBS-level accuracy

Fortin type, used by U.S. Signal Corps. You adjust level of mercury pool so its surface just touches ivory point. This fixes zero point of column. Use scale and vernier to read column height. Then make corrections for temperature and gravity as shown in instruction booklet. This will give true barometric pressure at your location. If you wish to determine sea level pressure, add 0.25mm for each 27m of your altitude.

Signal Corps model can be used up to 914m above sea level. Its double scale reads 646-800mm (0.1mm div.) and 25.5-31" (0.1" div.). Thermometer has double scale (°C and °F). Calibration is traceable to National Bureau of Standards primaries.

Mercury level and zero point are clearly visible in glass cistern. White backing for cistern and meniscus make precise reading easy. Tube has uniform 6.4mm bore, so capillary depression is constant and taken into account in calibration. Only necessary corrections are for temperature and gravity.

Ordering Information: Mercury Barometer. Tube is in metal casing on 8.9x107cm hardwood panel. Mercury included.
2-380244.00

Economical School Model

Student-level accuracy

Schools that don't need NBS-level accuracy of 2-380 barometer can get mercury barometer good up to 1980m (610-815mm; 24-32") for less than half the price. Vernier helps you read to ±0.1mm and ±0.01", but calibration is less accurate.

Mercury cistern is clear plastic with electric zero-set device. Diffuser helps make precise readings.

Ordering Information: Tube and cistern are on metal backing with double-scale thermometer (-10° to 55°C; 15° to 125°F).
2-383120.00

Thermometer. Double scale, for 2-383 barometer.
2-383-59.00

Barometers for use up to 3660m are available on special order

Aneroid Barometers

Direct-reading dial and recording models

Seven-Day Recording Types:

Spring-drive precision metric model. Recording aneroid barometer has spring-driven 7-day jeweled chart drive, temperature-compensated diaphragm movement. Calibration error is less than ±0.04cm. Measuring error less than ±0.06cm over 71-79cm range. You can use it from 0 to 1070m.

Ordering Information: Clear plastic case, 32x19x16cmH, protects mechanism and keeps chart visible. With year's supply of 2-416 charts, ink, and instructions.

2-415320.00

Charts, metric, 7-day, for 2-415 recording barometer. Charts are 9.5cm high, graduated from 71 to 79cm of mercury.

2-416Pk of 52/9.95

Electric inch-scale model. No need to wind chart drive of this moderate-priced recording aneroid barometer. It is line-operated. Magnifying mechanism gives maximum pen movement for small pressure changes. Usable up to 10,000' (3048m). Range, 29 to 31" (74-79cm) of mercury.

Ordering Information: Plastic case is 31x15x15cmH. With 52 charts, ink, and instructions. 115V 60Hz.
2-417125.00

Charts, inch-scale, 7-day, for 2-417 recording barometer. Graduated from 29 to 31" of mercury.
2-417-10Pk of 52/9.95

Dual-Scale Dial Types:

For sea level. Inexpensive dial barometer meets marine requirements with scales covering pressures (70.3-79.7cm; 28.0-31.0") usually encountered at or near sea level. Set movable pointer, so direction and amount of change shows immediately.

Ordering Information: Heavy polished brass case (11cm dia) resists salt air corrosion. RAIN-CHANGE-FAIR indicator for weather prediction. Adjustable for altitudes to 1067m.

2-40432.50

Elevations up to 1070m. Precision open-face brass-case barometer (13cm dia) has 66.0-78.7cm and 26-31" scales for use at altitudes up to 1070m. Screw adjustment compensates for altitude, ensures more accurate readings of pressure changes.
2-405150.00

Fisher CircuStat® Baths

Versatile constant temperature circulators for water or oil

15-444-50

Model 280 . . . maximum precision

Constancy: $\pm 0.025^{\circ}\text{C}$ at midrange

Modularized bath features controller that allows operator to optimize heat input and eliminate temperature overshoot. Temperature constancy of $\pm 0.025^{\circ}\text{C}$ from 30° to 80°C and $\pm 0.2^{\circ}\text{C}$ from 100° to 150°C . Thermoregulator attached to controller senses temperature differences as small as 0.005°C over 0° to 150°C temperature range.

Corrosion-resistant stainless-steel and plastic circulating pump with 12 liter/min pumping capacity. Temperature reproducibility of $\pm 2^{\circ}\text{C}$; uniformity of $\pm 0.04^{\circ}\text{C}$ from 30° to 80°C ; $\pm 0.2^{\circ}\text{C}$ from 100° to 150°C . Heat-up time: 95 min in 15 liter water from 25° to 80°C ; 135 min in 15 liter bath oil from 25° to 50°C .

Ordering Information

Model 280 Bath. With controller, thermoregulator, thermometer and clamp, illuminated base unit; bath jar, 31dia x 31cmH; four support rods 46cm high. For 115V 50/60Hz, 1000w.

15-444-50735.00

Model 180 . . . low-cost

Constancy: $\pm 0.25^{\circ}\text{C}$

Same as 15-444-50 except without external thermoregulator and with ambient to 102°C temperature range. Temperature controller is hydraulic probe thermostat with probe mounted on heater. Provides excellent anticipation and eliminates large temperature overshoot. Responds to temperature change as small as $\pm 0.05^{\circ}\text{C}$. Temperature constancy is $\pm 0.25^{\circ}\text{C}$; uniformity $\pm 0.25^{\circ}\text{C}$.

Ordering Information

Model 180 Bath. With controller, thermometer and clamp, illuminated base unit; bath jar, 31dia x 31cmH; four 46cm high support rods. For 115V 50/60Hz, 1000w.

15-445395.00

CircuStat® Bath, contd.
Replacement Parts for CircuStats

Controller
For Model 280 CircuStat®. 115V 50/60Hz. Can be used as a constant temperature circulator with various bath jars and tanks. See page 72 for full description.

15-444-52.....550.00

Thermoregulator
For Model 280 CircuStat.

15-445-38.....98.00

Controller
For Model 180 CircuStat. 115V 50/60Hz. Can be used as a constant temperature circulator with various bath jars and tanks. See page 72 for full description.

15-445-2.....240.00

Illuminated Base Assembly. For 115V 50/60Hz.

15-445-4.....175.00

Bath Jars
PYREX® brand. Plain, cylindrical jars mold-blown with substantial walls for mechanical strength. Open ends are ground. Not recommended for use over direct heat or for pressure or vacuum applications. 11-823L has recessed grips. (Corning 6942 and 6943)

O.D.xH	Approx. Capac	Cat. No.	Case of 1

Bath Oil
Stabilized. Smoke point, 163° to 166°C. Flash point, 190°C.

O-25gal/63.00

Clamp
Holds objects to 25mm max dia. Fisher Castaloy® 3-finger clamp with vinyl sleeves designed especially for Fisher CircuStat baths. Clamping part adjustable from 3 to 8mm. 95mm long.

15-445-70Ea/5.25
Lot of 12, Ea/4.75

Thermometer Clamp
Fisher Castaloy. Holds objects to 8mm max dia. For thermometers, heaters, small viscosity pipets. Can be attached to anything up to 8mm thick. Adjustable jaws. 95mm long.

15-445-80Ea/4.00
Lot of 12, Ea/3.60

Tubing Adapter Kit
Affix to female outlet of CircuStat bath pump to accept rubber tubing 6.4mm bore. Simplifies connections to common laboratory apparatus. Includes tubing connector and clamp. Without tubing.

15-444-55.....23.00

Multi-Opening Water Baths

Choice of 4 or 8 openings
Steam or electrically heated

Four-hole models are 38Lx38Wx10cmH with 13cm dia holes. Each hole accommodates set of 5 concentric rings.

Eight-hole models are 41Lx75Wx10cmH. Two 16cm dia holes accommodate 6 concentric rings and four 13cm dia holes accommodate 5 concentric rings. Other 2 holes are 10.5cm dia.

Steam models have perforated brass coil with 1/4" IPS inlet to admit steam. Electric models have copper-clad immersion heaters and 3-position switch. Operation on 115VAC/DC, except 15-491-1 which operates on 230VAC/DC. 100°C maximum temperature on all models.

Ordering Information

Water Baths. Stainless-steel construction. Concentric rings (same metal as bath) have hole sizes from 25mm dia in 25mm increments. Top flange for mounting flush with tables. With water level device and adjustable drains. Without support frame.

Heat Type	Construction	Time to 100°C	Cat. No.	Ea
4 Openings				
Steam	Stainless-steel	4½ min	15-486	195.00
Electric (1100w)	Stainless-steel	40	15-496	245.00

Electric (2000w)	Stainless-steel	58	15-491-1	325.00

Support Frames

Welded angle iron with formed aluminum legs. Add 22cm to height of steaming baths. With fasteners and lockwashers.

For Baths With	Cat. No.	Ea
4 Holes	15-481-5	25.00
8 Holes	15-481-6	28.00

Water Baths

Water Bath For Test Tubes

15-515

Circular form. Cylindrical with flat bottom and flange that rests on tripod. Concentric rings and 2 flat plates with nineteen 22mm dia holes for test tubes. Copper-tinned inside. Polished and lacquered outside. Steam escape. Handles. 20dia x 9.5cmD.

15-51532.50

Tripod. For mounting 15-515 bath over burner. Iron hammer tone grey enamel with zinc-plated steel legs. 21 ID x 23cmH.

15-515-510.00

Shallow Baths With Concentric Rings

15-518

15-519-10

General purpose, shallow form. Pressed and spun from tin-lined copper. Flat bottom, reinforced, beaded rims. Copper concentric rings, steam escape, handles. Polished, lacquered exterior.

Dia x D	No. Rings	Cat. No.	Ea
15x6.4cm	5	15-518A	14.50
20x6.6	7	15-518B	24.00
25x9.2	8	15-518C	37.50

Shallow form with constant water level. Same as 15-518 but with constant water level. 20dia x 6.6cmD with 7 rings.

15-519-1036.00

Replacement Water-Level Regulator

15-526

Same type of regulator as supplied with 15-519-10 bath. Maintains constant water depth to 73mm in baths. Water flows into regulator through gooseneck and rises simultaneously in bath and regulator. Water level controlled by height of adjustable flow tube.

Brass with serrated inlet nipple and hexagonal nut for attachment to bath. 102mm high.

15-52612.50

See p 1147 for tripods to support these baths.

Student Bath

15-518-2

Compact, economical. Tin-lined copper shallow-form body with flat bottom, beaded reinforced rim, steam escape, handles. 3 sets of 60mm dia concentric rings. Polished and lacquered. 20cm dia.

15-518-229.00

Army Medical School Bath

15-522

Top cover has eighteen 22mm dia openings and 25mm center tubulation for thermometer. Bottom plate has eighteen 12mm dia openings for test tubes. Heavy tinned copper, polished and lacquered. 20dia x 10cmD with recessed shoulder for tripod. With steam escape, handles and 17 ID x 23cmH tripod.

15-52237.00

Test Tubes.

See complete listings on p 1157.

Dry Bath Test Tube Incubators.

See pp 520-521.

Magni-Whirl® Water Baths

Magnetic agitation system in 4 useful models

15-453-400

(1) Shaker Bath

Operates with shake or no-shake option

For temperature-controlled agitation of flasks and test tubes, for shaking without liquid, or for use as water bath without shaking. Temperature range, 5° above ambient to +100°C with $\pm 0.2^\circ\text{C}$ uniformity. Shaking speed, 10 to 200 oscillations/min. Shaking stroke variable from 0 to 49mm.

Ordering Information: Insulated stainless steel. Working space without shaker, 46Lx31Wx19cmD. Over-all, 74Lx38Wx41cmH. 32 liter capacity. Removable stainless-steel shaker carriage with spring clamps to hold racks and trays in place. Stainless-steel heating elements. With dial thermometer. For 120V 50/60Hz, 1600w. Shipping wt, 57kg (125 lb). Wiring meets amended N.E. Code.

15-453-400781.00

15-453

(2) Utility Baths

100% accessible working area

All purpose bath maintains temperatures from 5° above ambient to 100°C within $\pm 0.2^\circ\text{C}$. Diffuser plate can be adjusted for bath depth of 13cm. Can be used as a serological bath.

Ordering Information: Double-wall stainless-steel insulated with 25mm Asbestocel. With drain, pilot lights, thermometer graduated from -10° to 110°C in 1°C divisions. Wiring meets N.E. Code as amended. UL listed. 15-453D has line cord and plug. Others have terminal box. For 115V 50/60Hz.

Inside LxWxD	Over-all LxWxH	Approx. Capac.	Max Watts	Shp. Wt.	Cat. No.	Ea

91x46x24	114x51x48	118	2750	54 (120)	15-453C	720.00

Available for 230VAC single phase on special order.

15-453-20B

(3) Refrigerated Bath

With 0° to 100°C range

For viscosity and ASTM tests, instrument calibrations and biochemical tests. Constancy $\pm 0.2^\circ\text{C}$. Operates with compressor containing Refrigerant-12. From $+10^\circ$ down to 0°C , non-freezing medium such as ethylene glycol or alcohol should be used. For temperatures above ambient, turn off compressor and operate bath with heaters in conventional manner.

Ordering Information: Double-wall stainless steel insulated with Asbestocel. Refrigeration motor, 1/2shp. Interior, 46Lx31Wx18cmD. Exterior, 69Lx71Wx43cmH. 32 liter capacity. With drain, pilot lights, thermometer graduated from -10° to $+110^\circ\text{C}$ in 1°C divisions. Wiring meets N.E. Code as amended. For 115V 50/60 Hz, 2100w. Terminal box for electrical connection. Shipping wt, 64kg (140 lb).

15-453-20B845.00

(4) Glass Jar Baths

Full visibility

Suitable for ASTM viscosity tests. Temperatures from 5° above ambient to 100°C within $\pm 0.1^\circ\text{C}$. Removable control unit at top of bath lifts off with attached heater element assembly as complete unit. Facilitates cleaning jar.

Ordering Information: PYREX® brand glass jar with removable control unit, sheathed, low-watt density heaters, stainless-steel base. Two stainless-steel rods with threaded hexagonal top-fittings for extension rods hold jar in place. With thermometer graduated from -10° to $+110^\circ\text{C}$ in 1°C divisions. Wiring meets N.E. Code. UL listed. For 115V 50/60Hz.

Jar Dia x H	Max Watts	Shp. Wt.	Cat. No.	Ea
21x29cm	300	18kg (40 lb)	15-453-50A	235.00
31x31	600	20 (45)	15-453-50B	335.00

15-453-50

Water Shaker Bath

Use as shaker only, bath, or combination

Operating Principle

Automatic magnetic agitation system provides gentle circulation of liquids. An agitator plate, pulsated by DC electromagnet circulates bath liquid. (See illustration.) Plate speed is factory-set but can be changed to meet operating requirements.

Control panel is set to control at 2 frequently used temperatures. Easily adjustable for others.

Memory Ring temperature calibrating dial for selecting correction factor for any given temperature. Once temperature is calibrated and correction factor determined, record it on ring. Next time you use that temperature, correction factor automatically appears on dial to indicate proper setting.

Magni-Whirl Shaker Bath Accessories

Flask Trays

Stainless steel. For Erlenmeyer flasks. 17Lx24cmW. 15-453-400 bath holds 2 of these trays.

Total Flask Capac	Cat. No.	Ea
twenty 25ml or twelve 50ml	15-453-404	20.70
seven 125ml or five 250ml	15-453-406	20.70

Test Tube Rack

Stainless steel. Holds twenty 12mm tubes in 2 rows. 25Lx5.2Wx14cmH. 15-453-400 bath holds 6 racks.

15-453-4024.80

Flask Holders

Nickel-plated bronze. Spring clip design grips flasks firmly.

For Flask Capac	Cat. No.	Ea
25ml	15-453-410	3.75
50	15-453-412	3.75
125	15-453-414	4.80
250	15-453-416	4.80
500	15-453-418	5.30

For serological test tube racks for use with Magni-Whirl baths, see p 1144.

Equipped to take interchangeable trays that hold all usual Erlenmeyer flasks and beakers and test tubes from 13-25mm dia (see listing below). Ideal for tissue cultures, enzyme reactions, bacterial incubations, fermentations, tissue section processing, diffusions, extractions, dialyses.

Adjustable stroke lengths of 13, 25, or 38mm. Variable transformer adjusts shaking speed from 50 to 200 oscillations/min. Thermostatic temperature control of $\pm 0.5^{\circ}\text{C}$ from 25° to 120°C . Use nontoxic, high temperature heat transfer liquid for high temperatures.

Ordering Information: Four 375w heating elements fixed to bottom of reservoir. Cast-aluminum Teflon®-lined insulated reservoir contains tray rack, adjustable for 9 positions at 13mm intervals. 23 liter reservoir, 52Lx29Wx17cmD. Over-all, 71Lx35Wx28 cmH. With rack and thermometer bracket but without thermometer and trays. For 115V 50/60Hz, 1600w. UL listed.

15-453-1001105.00
(AO 2156)

Trays

For use with 15-453-100 bath. Hold flasks and beakers. (AO 2161-2166).

Container Size		Total Containers	Cat. No.	Ea

Test Tube Tray

For 15-453-100 bath. Holds up to 50 tubes, 13 to 25mm dia. Stainless steel.

15-453-106141.00
(AO 2167)

Gassing Hood

Seals off atmosphere by sitting in liquid reservoir.

15-453-10782.00
(AO 2171)

For bath thermometer, see p 1159

Dubnoff Shaking Incubator

Hooded for atmospheric control . . .

Features gassing hoods with serrated hose connections. Two accurate flowmeters. Motor with solid-state speed control maintains constant shaking speed from 30 to 150 strokes/min. Ideal for tissue metabolism, enzyme studies, protein coagulations, fermentations, homogenate research, respiratory quotient investigations, diffusions, dialyses. Temperature range, 3° above ambient to 100 °C, to $\pm 0.05^{\circ}\text{C}$ sensitivity. $\pm 0.1^{\circ}\text{C}$ uniformity at 37°C. Length of stroke, 38mm. Flowmeter range, 0 to 10 cu ft/hr (0 to 283 liters/hr).

Ordering Information: Insulated stainless-steel bath, 3.5 liter capacity, 39Lx28Wx11cmD. Over-all, 57Lx 38Wx53cmH. Incubating tray holds two 15-453-210 racks accommodating 20ml beakers, 25ml and 50ml flasks. Two 400w heaters with 4-position heat switch for off, 200w, 400w, 800w. Hydraulic thermostat for effective temperature control. With flowmeters, stainless-steel gable cover for entire bath, 1 large and 2 small gassing hoods, thermometer graduated from -10° to $+110^{\circ}\text{C}$, water level regulator. Without racks. For 120V 50/60Hz, 1610w. Shipping wt, 27kg (60 lb).

15-453-200.....1095.00
(Precision 66722)

Shallow-Form Shaker Bath. Same as 15-453-200 but without cover, gassing hoods, flow regulator. For protein determinations, tissue cultures, mixing reagents or solutions. 100°C maximum temperature. Bath inside, 39Lx28Wx5.7cmD. Over-all, 58Lx38Wx25cmH. For 120V 50/60Hz, 1610w. Shipping wt, 20 kg (45 lb). Without racks.

15-453-205.....895.00
(Precision 66799)

Racks
For 15-453-200 and 15-453-205 baths. Any 2 racks fit into either bath at one time. Stainless-steel.

Precision Shaker Baths

Range 37° to 100°C. . .
20 to 200 oscillations/min

Continuous controlled shaking for variety of containers with or without immersion in liquid.

Pushbutton temperature control allows operation between 37° and 100°C. Settings accurate within $\pm 0.05^\circ\text{C}$. Uniformity to $\pm 0.03^\circ\text{C}$. Maximum temperature, 70°C without cover; 100°C with cover.

Shaker speed variable from 20-200 oscillations/min and indicated on calibrated meter. Stroke length adjustable for 13, 25, 38mm.

Stainless-steel shaker tray has holes for accommodating 7 sizes of glassware clips listed at right. Snap in any combination of clips without removing tray from bath.

Ordering Information: Insulated stainless-steel. Housing finished in blue enamel. Nickel alloy immersion heaters. With shaking shelf and thermometer. For 120V 50/60Hz.

17-liter Bath. Interior, 26Lx33Wx15cmD. Exterior, 32Lx53Wx24cmH. Shipping wt, 14kg (30 lb). 1050w.

Freas® Water Baths

Direct-reading digital temperature selection
21- and 94-liter sizes

Solid-state controller lets you set desired temperature directly on 3-digit register. Brings bath to precise setting automatically without repeated adjustments or thermometer watching. No relay contacts to wear out.

Range ambient to 99.9°C. Uniformity at 37°C is $\pm 0.05^\circ\text{C}$, using optional cover.

Convenient, time-saving controller, excellent uniformity, and quality construction make these units outstanding performers for routine clinical use, biochemical and industrial research, quality control, referee testing.

Stainless-steel chamber has heating elements bonded to underside for efficient heat transfer. Stainless-steel diffuser shelf suspended above bottom acts as heat baffle and improves circulation beneath samples.

Ordering Information: Direct-reading solid-state controller with platinum sensor, stainless-steel chamber with diffuser shelf, glass wool and air space insulation, circulator pump with fan-cooled motor and stainless-steel impeller. Model 270 for 120V has conduit box connection; all other units equipped with 3-wire line cord with plug. Without cover.

Temptrol™ Constant Temperature Circulating Baths

Temperatures as low as -25° . . . up to $+150^{\circ}\text{C}$

Bath capacities . . . from 4.7 to 57 liters

Dual-purpose constant temperature circulating systems with accurate temperature control. Use as circulators . . . immersion baths . . . or both simultaneously.

Great for applications with refractometers, spectrophotometers, calorimeters, electrophoresis chambers, chromatography columns, lasers, viscometers, sonifiers, polarimeters, vacuum distillation systems, aquariums. Useful for pre-chilling or warming specimens. Incubation or stabilization of material prior to testing. Biochemical or bacteriological research.

Important features of Temptrol Systems include:

Set-and-forget temperature selector. Provides exact temperature setting in increments of 0.1°C. Just dial thumbwheels until desired temperature appears in display window. Eliminates time-consuming resetting method associated with hydraulic and thermoregulator controls.

Powerful pumping capacity. Ensures excellent temperature uniformity throughout system. Permits remote location of circulators from test instruments and stabilization of several test instruments simultaneously.

Minimal electrical interference. Zero-switching circuitry and responsive platinum sensor prevent interference effects on other electronic devices. Even in same room.

Rugged construction. Aluminum cabinets finished in baked enamel. One-piece stainless-steel bath chambers with hinged covers. All parts in contact with liquid are stainless-steel, Viton, or silicone. Solid-state, time proportioning temperature controlling system with zero switching. Platinum sensing probe used for monitoring temperature change. Centrifugal pump with fan-cooled motor.

Five models available:

Model	200	250	253	254	255
Applications/ Description	Permits use of any size/shape external container for constant-temperature media. Container can be placed up to 4.6m above circulator.	Smallest of the five models. Takes 0.09m ² of bench space. Built-in cooling coils.	General pupose unit. Built-in cooling coils.	For electrophoresis, column chromatography, laser cooling, anywhere where reaction temperatures require control. Built-in refrigerator. Temperature range switch. 3-position rocker heat-cool switch.	For wide temperature range and large bath volume requirements. Built-in refrigerator. Two 28-liter chambers. Temperature-range selector switch. 3-position rocker heat-cool switch. Dual pumps: one for internal circulation. One for external circulation. Mounted on casters.

Lauda Constant-Temperature Circulators

15 models with
choice of control accuracy
and reservoir capacity

13-874-178

13-874-180

13-874-181

13-874-208

Heating Circulators

For use above ambient temperature. Components in contact with bath liquid are stainless steel. Cooling coils are provided in bath reservoir for circulation of tap water as required for control near room temperature. Model K-2/D is equipped with combination pressure-suction pump which

permits circulation through an external bath and back into the circulator reservoir. All models include reading thermometer. Covers for the bath-type models (C-12T, C-12B, C-20T, C-20B) are available as optional accessories (see below).

Accessories for Lauda Circulators

Thermometer. For K-models only. Range -1° to +101°C in 0.5° divisions. 13-874-213.....24.25

Bath Covers. For 12-liter circulators. Stainless steel. Fits models C-12T, C-12B. 13-874-183.....20.25

For 20-liter circulators. Fits models C-20T, C-20B, RC-20T, RC-20B. 13-874-184.....33.75

Mercury Thermoregulators. For K-model circulators only. Double, fork-type bulb provides high sensitivity. Models K-2 and K-2/D regularly include 13-874-210. Models K-2/R, K-2/RD, and K-4/R include 13-874-211.

Range	Div	Cat. No.	Ea
-5° to +105°C	1°C	13-874-210	45.05
-35° to +105°C	1°	13-874-211	56.00

Seven of the models have built-in mechanical refrigerator. All 15 units are used to circulate liquids at constant temperature through spectrophotometers, refractometers, polarimeters, viscometers, lasers, jacketed glassware.

All models feature stainless-steel construction of reservoir, pump, heater sheath, and coolant coils.

In T-suffix models (C-3T, C-12T, C-20T, RC-3T, RC-20T), bath temperature is controlled by hydraulic thermostat with single dial for setting temperature.

In B-suffix models (C-3B, C-12B, C-20B, RC-3B, RC-20B), superior control accuracy is the big feature. All five circulators have electronic thermistor controllers with coarse and fine temperature-setting dials. These models also have a convenient selector switch for three preset temperatures: 25°, 37°, and 56°C, as frequently required in clinical and biochemical applications.

In K-models, temperature is controlled by a sensitive mercury contact thermoregulator to provide maximum accuracy. K-models have flow control

valve to adjust pumping rate and have continuously adjustable heater output from 20% to 100% of maximum wattage.

For Models K-2, K-2/D, and all refrigerated models, utilization of upper portion of temperature range may require a thermometer other than that supplied and, in the case of the K-models, a higher-range mercury thermoregulator would also be needed. Restricting ranges of thermometer or thermoregulator appear in tables.

13-874-187

13-874-200

13-874-190

13-874-206

Lauda Refrigerated Circulators

Built-in mechanical refrigerators permit low-temperature operation. K-models are controlled by a mercury contact thermoregulator. K-models have flow control valve to adjust pumping rate and have continuously adjustable heater output from 20% to 100% of maximum wattage.

Model K-2/RD is equipped with combination pressure-suction pump which permits circulation

through an external bath and back into the circulator bath.

Model K-4/R, with range down to -30°C, has 1/3 hp compressor for greater heat removal capacity and includes bath cover. Cover for other bath-type models (RC-20T, RC-20B) is available as accessory (see bottom of preceding page).

All models have drain valve and are supplied with reading thermometer.

Haake Constant Temperature Circulators

**Temperatures as low as
-30°C* . . . up to 250°C**

**Reservoir capacities from
1.9 to 23 liters**

Ten models are listed in following table. Select the one that fits your requirements for capacity (volume and temperature), control, and dimensions.

All are used to circulate constant temperature liquids through viscometers, polarimeters, refractometers, spectrophotometers, amino acid analyzers, or blood pH meters.

Each unit consists of 4 major components:

- (1) antechamber where temperature control is achieved (heater, cooling coil, inlet/ outlet nozzles);
- (2) pump with motor;
- (3) control system;
- (4) housing. All stainless-steel construction.

All models include 13-874-110 thermometer and operate on 115V 50/60Hz.

Portable Constant Temperature Circulators

For temperature regulation of open baths (capacities to 189 liters . . . temperatures to 150°C . . . accuracy to ± 0.01 °C)

Can be immersed, clipped to sides of vessels, mounted on lab stands. For use on edge of tanks, aquariums, jar style baths, open or closed systems. All are stainless steel with motor, pump, heater. For 115V 50/60Hz.

Model E52

High temperature accuracy. Fully adjustable heating capacity. Zero voltage switching. With thermoregulator, thermometer, and mounting bracket.

Model ED

Strong pump for large volumes. High, fully adjustable heating capacity. Separated controller for remote use. With cooling coil, water safety level, control box, thermoregulator, thermometer, mounting bracket.

Model E12

High heating capacity. With thermometer, hydraulic thermostat.

Fisher CircuStat[®] Bath Controllers

Permit you to use your container as a circulator for temperature-controlled liquids . . . or as a conventional bath

Two models offered

Model 280 (Constancy: $\pm 0.025^{\circ}\text{C}$)

Unit mounts on rim of suitable battery jar or tank to convert it to a constant temperature oil or water circulating bath system. Pump maintains bath uniformity and allows circulation of bath liquid to external apparatus. Self-contained unit with 1000-watt heater and powerful circulating pump. Solid-state controller uses sensitive, direct-reading mercury thermoregulator to provide excellent bath constancy.

Temperature range, ambient to 150°C . Performance in an uncovered 15-liter bath: constancy, $\pm 0.025^{\circ}\text{C}$ from 30° to 80°C (water) and $\pm 0.2^{\circ}\text{C}$ from 100° to 150°C (oil). Uniformity, $\pm 0.04^{\circ}\text{C}$ from 30° to 80°C (water) and $\pm 0.2^{\circ}\text{C}$ from 100° to 150°C (oil). Heat-up time from 25° to 80°C (water), 95 min.

Mercury-contact thermoregulator has magnetically coupled control knob for setting pointer on direct-reading temperature scale in 1°C divisions. Senses temperature differences as small as 0.005°C over entire range. Reproducibility of repeat settings is within $\pm 2^{\circ}\text{C}$.

Pump circulates 12 liters/min at 30cm head. Shaded-pole motor pump is brushless, non-sparking, safe in explosive atmospheres.

For CircuStat bath accessories, see p 60.

15-444-52

Ordering Information: Equipped with thermal-circuit-breaker to prevent heater burnout. Corrosion-resistant pump constructed of stainless steel and plastic. Immersion heater with chrome-plated sheath. Minimum bath vessel depth requirement, 15cm. With attached mercury thermoregulator (0° to 150°C), thermometer (-20° to $+150^{\circ}\text{C}$), and thermometer clamp. Without tubing adapter; see 15-444-55 on page 60. 115V 50/60Hz.

15-444-52550.00

15-445-2

Model 180 (Constancy: $\pm 0.25^{\circ}\text{C}$)

Same as 15-444-52 but with hydraulic thermostat in place of mercury thermoregulator. Temperature range, ambient to 102°C . Sensitivity $\pm 0.05^{\circ}\text{C}$. Thermostat probe is mounted on heater. Minimizes temperature overshoot. Temperature constancy and uniformity in a 15-liter bath are both $\pm 0.25^{\circ}\text{C}$. 115V 50/60Hz.

15-445-2240.00

Lauda Constant Temperature Circulators

2 models: $\pm 0.03^{\circ}\text{C}$ or $\pm 0.2^{\circ}\text{C}$ accuracy

Excellent for maintaining temperature uniformity in rectangular baths (more difficult to control than round jars) or for circulation through closed external systems.

Unique rotating nozzle at base of pump shaft permits aggressive liquid circulation in bath. You can even aim nozzle to direct liquid flow to suit your need.

Pumps 8 liters/min at zero head, with max head of 1.7 meters. Operates in baths up to 50-liter capacity. Minimum depth requirement of bath vessel, 15cm. Temperature range, ambient to 100°C .

Ordering Information: Stainless-steel pumps and heaters. With -4° to 100°C thermometer and clamp for mounting circulator on glass or steel tanks. 115V 60Hz, 1050w. Two models available.

Precision Porta-Temp Constant Temperature Circulator

13-874-170

A portable heater, controller, stirrer, and circulator in one. Mounted in suitable container, it's a constant temperature bath. Add 2 pieces of rubber tubing and you have a circulating system for refractometers, viscometers, spectrophotometers. Will pump up to 2 liters/min at zero head. Pumps up to 120cm head.

Thermostatically controlled 1000w immersion heating unit heats 19 liters of water from 25° to 50°C in just 34 min. Maintains temperatures from 5°C above ambient to 90°C with $\pm 0.25^\circ\text{C}$ uniformity and $\pm 0.12^\circ\text{C}$ sensitivity. Stirring motor provides thorough agitation. Reference dial correlates thermostat settings with thermometer readings for accurate reproducibility.

Ordering Information: Enameled aluminum with screw clamp for connecting to containers up to 22mm thick. 18Lx16Wx8.9cmH housing. 33cmH, over-all. Requires 22cm minimum bath depth for use. Weighs only 3.6kg. Without thermometer or jar. 115V 60Hz, 1100w.

13-874-170235.00
(Precision 66590)

Precision Portable Water Bath Cooler

15-456-110

Porta-Cool consists of compressor, refrigerating system and cooling coil. Simply immerse coil in liquid to be cooled. Permits fast setups for cooling baths. May be used in controlled temperature baths to maintain accurate temperatures from ambient down to 0°C. When used with 13-874-170 Porta-Temp, Porta-Cool converts any container into a constant temperature bath and circulating system with range of 0° to 90°C.

Ordering Information: Rolled steel housing with baked enamel finish. 37Lx36Wx41cmH. Mounted on 4 ball-bearing casters. Thoroughly vented front and back. With $\frac{1}{6}$ hp compressor, stainless-steel 12-loop cooling coil, 20cmH (tubing 16mm dia), with 2.1m hose, coil storage fixture, control panel. 115V 50/60Hz, 400w.

Tempunit Constant Temperature Circulator

13-874-155

Tempunit is circulating pump, temperature regulator, heating unit, and stirrer all in one. Converts any suitable laboratory vessel with depth of at least 14cm into a precise constant temperature bath.

Temperature range of 15° to 95°C with $\pm 0.01^\circ\text{C}$ uniformity in a 19-liter water bath. Centrifugal pump delivers 8 liters/min to external apparatus.

Can be safely used without supervision. Automatically switches off if bath temperature rises 3°C above set temperature or if bath liquid falls below required depth.

Ordering Information: Zero voltage switching and temperature indicating pointer. Housing and all submerged parts are stainless steel. 16Lx13Wx12cmH. Over-all height, 27cm. Shipping wt, 4kg (8.8 lb). 115V 60Hz, 1000w.

13-874-155339.00
(Techne TU-12)

Model B-1

Electronic temperature control. Thermistor temperature sensor lets you set temperature rapidly and accurately without thermoregulator adjustment. Accuracy of $\pm 0.03^\circ\text{C}$. Range 30° to 100°C. Separate knob for selection of frequently used preset temperatures of 25°, 37°, and 56°C.

13-874-175310.00

Model T-1

Thermostatic control. Same as 13-874-175 but without electronic controller or preset temperature selection. Range 30° to 100°C. Accuracy is $\pm 0.2^\circ\text{C}$.

13-874-176195.00

Coliform Incubator-Bath

44.5°C and 45.5°C pushbutton settings for water/sewage and food testing

Designed specifically for two tests: (1) Fecal coliforms in water or sewage at 44.5°C ($\pm 0.2^\circ\text{C}$) as required by APHA, EPA, AWWA, and WPCF, (2) *E. coli* in food at 45.5°C ($\pm 0.05^\circ\text{C}$) required by FDA regulations.

Automatic pushbutton settings for 44.5°C and 45.5°C. When water and samples reach set temperature, heater cycles on and off to maintain precise temperature set-point. Built-in water level regulator automatically maintains proper water depth.

Holds up to 288 fecal coliform or 150 *E. coli* cultures at one time.

Ordering Information: Blue and beige enameled unit with stainless-steel bath chamber. Solid-state controls. Over-all dimensions: 90Lx32Wx24cmH. Bath chamber dimensions: 71Lx27Wx18cmD. Without racks. 120V 60Hz.

15-459575.00
(Precision 66850)

Accessories

Test Tube Rack

Holds 50 test tubes up to 20x150mm for *E. coli* procedures. Bath holds 3 test tube racks (or 150 tubes). Stainless steel.

15-459-130.00

Petri Dish Rack

Holds ninety-six 50mm Petri dishes for fecal coliform procedures. Bath holds 3 Petri dish racks (or 288 dishes). With 2 rack retaining clips. Stainless steel.

15-459-235.00

Bath Cover

Stainless steel. Improves performance of 15-459 bath, reduces heat loss.

15-459-475.00
(Precision 66857)

Water Level Regulator

Replacement part for 15-459 bath. Maintains constant volume of liquid in bath, compensating for evaporation.

15-459-313.00

Thermometer

ASTM No. 91C. For use with 15-459 bath. Range, $+20^\circ$ to $+50^\circ\text{C}$. Subdivisions, 0.1°C . Total L, 370mm. Immersion L, 76mm.

15-173-24C13.75
Pk of 6/74.40

Thermo-Lift® Water Bath

21cm vertical jack excursion gives easy access to evaporator retorts

5-725-130

Shown with evaporator assembly.

Portable, temperature-controlled water bath on sturdy, scissor-type jack. Can be elevated to heat any stationary lab apparatus (such as retort on 9-548-200 evaporator). Bath adjustable from 20 cm minimum to 41cm maximum height simply by rotating large hand wheel.

Thermoregulator controls bath temperature from ambient to 100°C with $\pm 0.2^\circ\text{C}$ sensitivity. Front panel includes temperature selection dial, on-off switch, pilot light for 550w immersion heater, 51mm dia dial thermometer.

Ordering Information: Anodized aluminum and stainless-steel construction. Bath, 20Lx25Wx10cmD; capac, 3000ml. Over-all dimensions, in lowered position, 25Lx28Wx20cmH. 115V 60Hz.

5-725-130217.00
(Buchler PF-1060)

Replacement heating element. 550w. For 5-725-130 Thermo-Lift.

(Buchler PF-1035)

Fisher Versa-Bath Serological Baths

With $\pm 0.5^\circ\text{C}$ control

Multi-purpose in 3 sizes

For less than you would spend for a good thermoregulator, pair of immersion heaters, and relay, you can buy a Fisher Versa-Bath™. Attractive, stainless steel with built-in heating elements and adjustable hydraulic thermostats. Holds temperatures constant to $\pm 0.5^\circ\text{C}$ from below ambient to $+95^\circ\text{C}$.

Close control exceeds ASTM specs for such tests as ASTM D130 (copper corrosion by petroleum products), D865 (aging of vulcanized rubber) and D217 (cone penetration of lubricating greases). Ideal for incubations, inactivations, agglutinations, other serological, pharmaceutical, and biomedical procedures.

Three sizes available. Baths are all 22Hx39cm front-to-back. Line up neatly for sequential tests at different temperatures.

Small Versa-Bath holds 5.7 liters of water or oil. Two 1000ml Erlenmeyer or round bottom, three 500ml, or four 25ml flasks, or up to 60

serological test tubes in racks fit in this bath.

Medium size bath holds 11 liters of water or oil. Four 1000ml, six 500ml, or eight 250ml flasks, or up to 144 test tubes, can be accommodated.

Low-watt density heating elements, sheathed in chrome steel and mounted under bath floor, have sufficient thermal inertia to reach operating temperature evenly without overshooting.

For use with water or O-2 stabilized bath oil, stainless steel accessory cover prevents

evaporation above 60°C . Cover is gabled so condensation runs down to sides and does not drip on bath contents.

For below ambient temperatures, accessory cooling coil circulates cold water or coolant. Coils are aluminum tubing with serrated hose connections. Water pressure regulator (such as 15-529) should be used to ensure uniform coolant flow.

Ordering Information

Removable perforated stainless steel floor plate protects thermostat and provides level support for bath contents. Easy-to-clean stainless steel finish inside and out. Glass wool insulation.

Baths include thermometer, without racks, cover, cooling coil.

Large size bath holds 19 liters. Accommodates six or seven 1000ml, nine 500ml, or sixteen 250ml flasks, or 240 test tubes in racks.

Tecam® Fluidized Baths

Granular Alundum™ Heat-Transfer Medium
Temperatures to 600°C, excellent uniformity

Air diffused through porous plate at bottom of bath produces levitation effect on Alundum™ solid particles so they actually look and feel like bubbling liquid. In fact, Alundum has all usual properties of liquid except it has no melting or boiling point. It never evaporates. Has low electrical conductivity, ideal for electrical testing. Nonflammable, fume-free. Immersed vessels don't get wet so there is no cleaning or corrosion. Vessels of all shapes can be immersed easily.

Combination of high heat transfer, excellent heat capacity, and uniformity of behavior over wide temperature range make fluidized baths ideal for chemical flasks, high temperature organic distillations, catalytic experiments, heat treatment of small tools, selected calibration tests, testing electrical components, and removing plastic residues from tools and dies.

Air Regulator For Tecam Baths

Pressure regulator with air filter. For operating 14-220, 14-220-2, and 14-220-4 fluidized baths directly from air line. Regulates air pressure to 0.56kg/cm².

Bell Jar, Side Tubulation

PYREX brand bell jar for vacuum filtration in microchemical work. Made with ground flange. Top opening takes No. 4 stopper. 75 ODx120mmH. Support with ground plate.

2-627Ea/21.37
(Corning 6880) Case of 4/76.92

Plastic Bell Jar Dust Cover

Bell jar made of transparent methyl methacrylate plastic. Bottom of flange accurately ground. With handle at top. 18 ODx17cmH. Not recommended for vacuum use. Ideal for dust cover.

2-63214.05

Blowtorch

Operates with natural or artificial gas

Use with natural, artificial, refinery gas or mixture of these to produce a strong, steady flame that won't blow out or fluctuate. Recommended for glass blowing, brazing, and soldering.

Two needle valves control flame size and intensity. Burner head adjustable through circular range.

Ordering Information: Brass body with plastic control knobs and hand grip. 24cmL. With two interchangeable compressed air tips: 2-716-5B medium tip produces needle-point flame; 2-716-5C large tip produces brush flame. Oxygen tips and other sizes of compressed air tips may be purchased separately. With wrench, rotating union, and valve packing nuts.

2-716.....20.75

For tips see p 122.

PolyBoots

In 2 sizes and 2 plastic weights

Calf-high plastic boots protect shoes, and keep dirt out of clean rooms and manufacturing areas. 100/dispenser box.

Washing/

Dispensing Bottle With Wicker Neck

Wicker-covered neck ideal for hot solutions. Borosilicate glass with rubber stopper and tubing and glass tubes. 1000ml. 3-401B.....12.85

Guth Unitized® Bottle

One-hand sanitary manipulation. Index finger controls flow by means of air vent. Consists of stopper assembly with delivery tube and stopper; flask assembly with aspirator bulb, air check valves, and hand grip; 1000ml borosilicate flask. Neoprene rubber parts. 3-403Ea/28.96 Case of 12/312.77

Guth Universal® With Kool-Grip® Neck

Great for sanitary dispensing of hot or cold solutions. Coat of cork granules on neck. Includes 500ml borosilicate flask with low center of gravity, stable base; cap assembly with cap, check valves, aspirator bulb, bent delivery tube, flexible tubing, and tip. 3-403-10.....Ea/23.33 Case of 12/251.96

All-Glass Washing Bottle

Delivers fine stream of liquids. Mouthpiece and delivery tubes are fused into 24/40 stopper. 500ml. Useful for delivering materials having a solvent action on rubber stoppers. 3-406APk of 1/15.76 Case of 6/85.08 (Kimble 15135)

For scintillation vials and racks, see pp 570-571

Dispensing Bottles

Polyethylene Wash Bottles

Bottle and tubulation molded in one piece to eliminate leakage. Nalgene®. Conventional polyethylene with polypropylene screw closures. Wide mouth for easier filling. Flexible walls make squeezing easy. Dispensing tube gives ultra-fine stream or can be cut back to increase flow. Screw caps provided. (Nalge 2402)

Fisher Scientific Company

Pycnometer

For specific gravity
Determinations of semi-fluids

Pycnometer is made of aluminum alloy to withstand pressure necessary to expel air from viscous material and cause it to fill space in pycnometer completely.

Operation is simple. Fill pycnometer with material to be weighed and cover container with lid. As cap is screwed down tightly over lid, excess material is forced out and removed through 3.2mm hole in lid. Volume remaining in pycnometer is calibrated by weighing, filling with water, weighing again, computing difference.

In order to avoid pits or cavities in pycnometer, three parts are cut from solid bar stock instead of being cast. Three-part construction was adopted so that close manufacturing tolerances could be maintained and material under test would not be forced into threads. Capac, 15ml. 5 dia x 2.5cmH. FISHERbrand.

3-24728.00

Handy Boxes for the Laboratory

Aluminum Containers

Especially useful for moisture determinations in soil analysis. Collect soil in this container, weigh it, then dry it in oven. Moisture content is determined by reweighing soil after drying. Round seamless aluminum. Cover fits over bottom to prevent misplacement. 8.9 diax 5.1cmH. Also recommended for general use.

Polyethylene Buckets — 2 Styles

With cover

Close-fitting cover makes these pails ideal for storing specimens in formalin and other preservatives. Yellow conventional polyethylene with white cover. Nalgene®. Sturdy handles. 13 liter, 32cmH. Meets US Spec MIL-P-36257.

13-308Ea/6.63
(Nalge 7102) Case of 6/35.80

Without cover

For storing and mixing chemicals, autopsy room and custodial purposes, soaking glassware. White polyethylene.

Capac	Cat. No.	Ea	Case of 12
10 liters	13-308-10A	3.50	29.88
13	13-308-10B	3.75	35.76
17	13-308-10C	4.00	41.88

Stainless-Steel Buckets

For corrosives and chemicals. Handles pickling solutions, tanning and dye liquors, essential oils, food acids, salt and soap solutions. Stainless steel.

3-845 Buret for Petroleum Neutralization

Per ASTM D974. Petroleum sample is dissolved in beaker, then titrated with standard acid or base reagent from buret until neutralized. Buret reading indicates amount of reagent dis-

pensed to reach neutralization.

Air openings on buret have drying tubes filled with activated alumina for absorption of vapors and moisture. Absorbent and can be regenerated by heating.

Borosilicate glass with reagent bottle and aspirator bulb.

Machlett Automatic Burets

Eliminate errors from air bubbles
One stopcock fills and dispenses

Gravity filling eliminates errors and guards against deterioration of liquids affected by air. One stopcock controls everything. Half turn of stopcock fills buret; another half turn dispenses liquid. Overflow is automatically drawn back into reservoir through tube connecting reservoir with overflow bulb. With stopcock in horizontal position, all action stops.

Reservoir is easily filled without dismantling buret. Simply remove reservoir stopper to fill.

Single air intake on reservoir neck is protected by drying tube which removes moisture from incoming air. When buret is not in use, closing reservoir stopper protects buret contents from contamination.

Machlett burets can also be used in multiple by connecting central storage vessel to each reservoir neck opening. When used in this way, detachable drying tube is placed on storage vessel.

Support Assembly

For Machlett Burets

Heavy base provides maximum stability. White plastic splash tray on top of base has indentations for various size beakers. Castaloy® clamp has vinylized jaws to grip buret tip. Ring support specially designed for easy insertion of buret reservoir. Vinyl plastisol coating keeps support resilient and corrosion-resistant under hard use.

With 14-679 support stand (see page 1139), 5-754 Castaloy clamp holder (see page 191), 5-738 Castaloy micro versatile clamp (see page 190), 3-847-30 ring support (see below). For all except 50ml size burets.

3-847-26

Ammonia Dissociation Buret

Measures ammonia dissociation during nitriding of steel alloys

Direct index guide for regulating flow of gas into furnace. Gas (including hydrogen, nitrogen, and dissociated ammonia) is transferred from nitriding container to buret. Ammonia gas is soluble in water, whereas hydrogen and nitrogen are insoluble. Water from buret's upper reservoir is

admitted into buret. It immediately absorbs ammonia and leaves insoluble hydrogen and nitrogen in atmosphere above solution. Buret reading indicates amount of ammonia absorbed. 100ml graduated from 10% to 90% in 1% div, with 0% at bottom stopcock.

3-82872.00

Buret Accessories

Double Buret Support

For micro to 100ml sizes. Consists of 5-779 Castaloy® clamp and 14-667 support stand. Clamp holds burets rigidly with self-locking mechanism without obscuring graduation lines or numbers. Support stand, white porcelain. Large 33x18cm surface ample for beakers, flasks, evaporating dishes.

Flameless Electric Burner

Safe — no escaping gas
No matches needed
Temperatures to 600°C

Produces a controllable, flowing, heated stream of air up to 600°C. Heat is produced by air flowing continuously over an electric filament with a life of several thousand hours.

Switch turns burner on and off. Lighted switch indicates power "on". Burner heats-up in just 60 sec. No gas supply necessary.

Burner can be used in either vertical position (rests on bench) or horizontal position (hand-held like a staple gun) with no loss of efficiency. Outside barrel always remains cool.

Burner produces no moisture or other by-products of combustion.

Ordering Information: With power cord, air hose and permanently attached nozzle.
 Burner: 24cmH. Base: 7x17.5cm.

Fisher Burners

Produce twice the heat output of straight tube burners . . . 2520kg-cal/hr*

Meet Fed Spec NNN-B-795. Grid-top design channels flame through 100 separate openings. Minimizes temperature variation throughout flame. Provides uniform heat. Venturi tube thoroughly mixes air and gas. Adjustable air shutter and gas orifices ensure complete combustion. Stainless-steel grid is 10mm thick to prevent flashback. Leakproof needle valves. Serrated gas inlet. Rustproof chromium-plated brass body and zinc-aluminum alloy base. Separate models for natural, artificial, and LP gases. LP model operates best on Philgas, Shellgas, Pyrofax. Also operates with propane and butane.

*10,000Btu/hr

Fisher Multi-Flame® Burner

Great for blowing glass to 50mm diameter

Actually 2 burners in one body with choice of 4 principal flames for sealing and annealing: 2 small needle-shaped flames and 2 large multi-orifice flames.

Needle-shaped flame is produced by passing gas-oxygen mixture through single 1mm port in center of tip. Large flame is developed by channeling gas and oxygen separately through several small orifices. With use of large flame, no gas-oxygen mixing takes place inside burner; therefore dangerous flashback potential is eliminated.

Two valves, located on each side of burner body, control flow of gas and oxygen to determine type and size of flame: needle-shaped to large flames handle various jobs over wide range of glass sizes.

Spring-retained, packless, Teflon® con-

struction makes valves leak proof. Spring action also keeps valves from slipping out of position.

Pilot jet, located near burner tips, is controlled by separate needle valve. Operates with any gas from 4.4-29kg-cal/liter (500-3300Btu/ft³) at pressures between 15 and 23cm (water manometer). Requires 0.35-0.70kg/cm² (5-10psi) oxygen supply.

Vycor and quartz can be worked with hydrogen. Also useful for crucible ignition, ore fusions, coke button test.

Burner body mounted on stable, cast-iron base through ball and socket joint. Permits burner adjustment to any angle. Burner can also be quickly removed from base and clamped to glass blower's lathe.

Ordering Information: Multi-Flame Burner body and valve handles are nickel-plated brass. Cast-iron base finished in green enamel. 18cmH. With operating instructions.
4-170.....168.00

Selecta-Jet® Blast Burner

Choice of 5 flame shapes

Flame choice ranges from tiny sharp needle to bushy flame merely by rotating turret to any one of 5 positions. As turret rotates, flame passes from ignited tip to succeeding tip, eliminating re-igniting or complicated tip changing. Saves time, effort, and strain breakage caused by rapid cooling.

Ideal for working all types of glass tubing, pulling capillaries, making glass-to-metal seals, constructing glass system.

Operates with natural or artificial gas and oxygen. Also operates on LPG with 3 smaller turrets. Produces 2000°-3000°C temperatures.

Ordering Information: Burner body mounted on stable, cast-iron base through ball and socket joint. Permits burner adjustment to any angle. Brass turrets and valves. Base and body finished in chemical-resistant dark brown enamel. 17cmH. With operating instructions.

Oxygen Bomb Calorimeter

4-349-2

Automatic . . . 24 tests in 8 hours

Everything you need to determine calorific values and amounts of heat generated by combustion of fuel. Self-contained, water-jacketed, oxygen bomb calorimeter. Includes calorimeter jacket and bucket. Automatic temperature control system. Oxygen bomb. Thermometers and accessories. Performs ASTM D271 for coal and coke, D2015 for solid fuel, D240 for liquid hydrocarbon fuels, D2382 for hydrocarbon fuels.

Oxygen bomb method: weighed sample is ignited by electrically heated wire in oxygen atmosphere. Heat evolved during combustion is absorbed by weighed quantity of water in bucket surrounding combustion chamber. By observing temperature rise of water and knowing energy equivalent of calorimeter, amount of heat released from sample can be calculated.

Automatic adiabatic controls and automatic temperature-return system save time for operator and improve measurement repeatability and accuracy. Control system senses temperature differences between bucket and jacket as small as 0.001°C and automatically adds hot or cold water to equalize temperatures. At end of run, purge control automatically lowers jacket temperature to its starting point.

In replicate tests, temperatures are balanced within same narrow limits to eliminate errors. Using the $24^{\circ}\text{--}30^{\circ}\text{C}$ mercurial thermometers supplied, duplicate tests are repeatable within 14 calories/gram. With platinum resistance thermometer and Mueller bridge, repeatability is 0.05% and, in many cases, 0.02%.

342ml oxygen bomb accommodates samples having energy release up to 8000 calories/charge with maximum working pressures of $211\text{kg}/\text{cm}^2$.

Heavy plywood case covered with stain-resistant plastic. $31\text{L} \times 58\text{W} \times 41\text{cmH}$. 102cm needed above counter top to open and operate calorimeter.

Ordering Information: With jacket, bucket, thermometer supports, ignition circuit, and automatic temperature control system, 4-392-1 double-valve oxygen bomb, oxygen filling connection, bomb clamp, bomb cover support stand, 2 matched $24^{\circ}\text{--}30^{\circ}\text{C}$ Parr certified thermometers, 2 matched thermistor probes, 2 thermometer reading lenses, overflow hose, card of fuse wire, 6 stainless-steel capsules for holding liquid samples, vial of 10 standard benzoic acid pellets, assortment of extra gaskets and sealing rings, set of test certificates, instruction manual. For 115V 60Hz. Shipping wt. 63.5kg (104 lb).

4-349-2 3300.00
(Parr 1241)

Model with manual control (Parr 1242) available on special order.

Low-Cost Calorimeter

4-350-2

Plain oxygen bomb . . . 12 tests, 8 hr

Easy to use. Performs ASTM D271 for coal and coke, D240 for liquid hydrocarbon fuels.

Handles 10 to 12 tests in 8 hours. Duplicate tests vary no more than 0.5% of gross heat of combustion. Improved repeatability by operating calorimeter in temperature-controlled room with a more precise thermometer.

Operating principle, same as in 4-349-2 calorimeter, except has no provision for temperature control. Compensation for heat loss or gain is made by applying a correction figure computed from heat leak measurements taken immediately before and after each test.

Ordering Information: With insulating jacket (29Hx25cm dia), 2000g capacity oval bucket, thermometer support bracket, motor and belt, 4-392-1 oxygen bomb, oxygen filling connection, bomb clamp, calorimeter cover support stand, bomb cover support stand, $19^{\circ}\text{--}35^{\circ}\text{C}$ Parr certified calorimetric thermometer subdivided in 0.02°C , thermometer reading lens for estimating temperature to nearest 0.002°C , card of 4-396 fuse wire, six 4-385-5 stainless-steel fuel capsules, vial standard benzoic acid pellets, assortment of extra gaskets and sealing rings, instruction manual, set of test certificates. For ignition unit, see 4-354 on p 125. Oxygen cylinder not supplied. For 115V 50/60Hz. Can be equipped with 230V 50/60Hz motor on request.

4-350-2 1280.00
(Parr 1341)

Replacement Oxygen Bomb

For 4-349-2 and 4-350-2 calorimeters

For use in 4-349-2 and 4-350-2 calorimeters. 342ml double-valve bomb burns samples usually weighing 1g or less with energy release to 8000 calories per charge at maximum oxygen charging pressure of 35 atmospheres. Consists of cylinder, self-sealing head, screw cap. Inlet check valve operates automatically for filling; needle valve releases gases at end of test. With test certificate.

4-392-1 620.00
(Parr 1108)

Solution Calorimeter

Specifications

Measurement range	2 to 1000 calories
Temperature range	20° to 30°C
Thermometer sensitivity	0.001°C
Precision	1% or better
Detectability limit	0.2 calorie
Energy equivalent	110-145 calories/°C
Sample capacity	20ml
Solution capacity	90-120ml

Measures heat evolved or absorbed upon mixture of liquid-liquid or liquid-solid systems. Determines heats of reaction, heats of mixing, heats of wetting, heats of solution or dilution. Range, 2 to 1000 calories. Accuracy, approximately 1%.

Use thermochemical data for quantitative analysis. Study reactions that may be obscured by optical interferences. Assay weak

acids and weak bases that are otherwise difficult to quantitate. Useful in process development, routine assay, quality control, research, and educational applications in physical and analytical chemistry.

Sample cell, of Teflon® and glass, rotates in glass Dewar chamber for thorough mixing. External manipulator lowers sample into surrounding liquid. Sensitive thermistor bridge measures resulting temperature change. Use a strip chart recorder to plot temperature changes in °C. Or add a null meter to read thermometer bridge dial directly.

Ordering Information: With thermistor thermometer, externally mounted stirring motor, extra sample cell, bottle of standard, and instructions. 33Lx41Wx36cmH. 120V, 50/60Hz. Does not include recorder or null detector.

4-366.....1140.00
(Parr 1451)

Oxygen Bomb Apparatus

Burns solid or liquid samples

Oxygen bomb basic procedure for determining sulfur, halogens, and other elements in combustible materials according to ASTM D271 for sulfur in coal and coke, ASTM D808 for chlorine in new and used petroleum products.

Combustion products can be recovered completely within minutes. Samples large enough to be statistically significant can be burned in bomb, permitting use of variety of analytical techniques including those applicable to trace components.

Ordering Information: With 4-392-1 double-valve oxygen bomb (A); water bath; 4-354 ignition unit (B); oxygen filling connection (C); six 4-385-5 stainless-steel capsules for holding samples; 3 cards of 4-396 nickel alloy fuse wire; 100 gelatin capsules for volatile samples; bomb cover support stand; bench clamp; extra gaskets; instruction manual. For 115V 50/60Hz.

4-352.....883.00
(Parr 1901)

Calorimeter Accessories

Pellet Press

Prepares calorimetry or molecular weight samples. Convenient. Hand-operated. Makes pellets from powdered coal, pharmaceuticals, catalysts, fine chemicals, and dyes. Use in oxygen bomb calorimetry, emission spectroscopy, animal feed experiments. Consists of punch, die plug, die and pellet receiver, die pillar.

Makes pellets 12.7mm dia up to 12.7mm thick. One stroke makes pellet; second stroke ejects it into receiving cup. 23Lx13Wx25cmH.

4-379190.00
(Parr 2811)

Hot Water Heater for Calorimeter Jackets

Maintains and delivers hot water at line pressure in sufficient quantities to meet all requirements for jacket temperature adjustments in Parr adiabatic calorimeters or any other automatic or manual Parr calorimeter. Quick action thermostat (holds settings up to 80°C) and 950w immersion heater respond immediately to temperature changes in heater tank, making it possible to withdraw hot water at frequent intervals without exhausting supply.

Installing heater adjacent to a calorimeter minimizes heat loss in connecting line. Relief valve prohibits over-pressure. Strainer in water line keeps foreign particles out of system. 2.75 liter tank tested to 9kg/cm². Tank enclosed in metal housing 17cm²x33cmH. For 115V 50/60Hz.

National Spectroscopic Electrodes

Spot impurities certified
not to exceed: 2 ppm per
element . . .
6 ppm for all elements . . .
1 ppm total ash

Spot impurities are determined by sensitive cathode layer technique. Report of this analysis is included in each package of electrodes. Precise dimensional tolerances and extreme uniformity are maintained by total product quality control. Two grades of "High Purity" electrodes are available, differing only in physical properties.

Grade AGKSP* has optimum properties for general spectroscopic use. Excellent for light metals, porous cup and disc applications.

Grade SPK** has high density and structure providing exceptionally high oxidation resistance and smooth burning characteristics in DC arc applications. Also maintains uniform and concentrated spark for homogeneity studies. Low thermal conductivity characteristics ensure high heat concentration in sample zone. Recommended for heavy base metals such as iron, zirconium, titanium, and where high excitation potential is required.

Type	Density g/cm ³	Resistance Ohm/cm	†CTE/°C 300-1000°C	% Porosity
AGKSP*	1.61	1.0x10 ⁻⁴	1.9x10 ⁻⁶	28.5
SPK**	1.90	1.7x10 ⁻⁴	2.9x10 ⁻⁶	16.5

†Coefficient of thermal expansion

Description of Grades

- *AGKSP Grade.** AGKSP, manufactured graphite with highest crystallinity. Offers optimum graphite properties for spectroscopic applications. Highest thermal conductivity. Uniform porosity and structure recommend this grade for porous cup and disc applications in solution techniques.
- **SPK Grade.** Extruded graphite spectroscopic electrode material. Density and structure give exceptionally high oxidation resistance, and smooth burning characteristics. Because Grade SPK has lower thermal conductivity than Grade AGKSP, it maintains a higher heat concentration in the sample zone. In spark applications, SPK maintains very uniform and concentrated spark needed in homogeneity studies. Best suited for analysis of such heavier base materials as iron, zirconium, and titanium.
- ***AGKS Grade.** Manufactured graphite with uniform, highly crystalline structure. Moderate purity. Recommended where influence of electrode impurities and high reproducibility are not critical. Available in rod form only.

Lab Cart

Serves as wagon, desk, or instrument table

11-923

Carry heavy, bulky instruments and lab apparatus on this versatile lab cart or use it as a desk or instrument table. Strong, welded steel construction meets OSHA requirements. 7.6cm toe-locking casters permit easy moving or use in one place with complete stability. When used as desk, center support bar allows comfortable seating from either side. Top of cart/desk is of high pressure laminate with melamine exterior surfaces. 107Lx48Wx80cmH. Shipping wt, 16kg (35 lb).

11-923.....75.00

Lab Cart

Special for Kjeldahl flasks

11-925-10

Transport 24 Kjeldahl flasks easily and safely on this special lab cart. Shelves of high pressure laminate with melamine surfaces have beveled holes to support 500 or 800ml flasks upright, or neck-down for drying. With plastic-covered steel rod to support leaning flasks. Cart frame is strong, welded, 2.5cm square steel tubing coated with protective, light blue plastic. 89Lx33Wx116cmH. Shipping weight, 22kg(49 lb).

11-925-10145.00

Lab Cart

With two pan-like shelves

11-925-20

Carry a wide variety of general lab equipment on this strong, versatile lab cart. With two 5cmD leakproof pan-like shelves of 18-gauge steel welded to a frame of 2.5cm square steel tubing and a removable rubber mat for each pan. 89Lx48Wx93cmH. Shipping weight, 26kg(58 lb).

Fisher Scientific Company

Lab Wagon

Acid, alkali, and heat-resistant finish

11-927

Meets OSHA requirements, carries many chemical bottles and instruments. Large 89Lx48cmW shelves of high-pressure laminate with melamine exterior surfaces. Resists damage by acids, alkalies, and high heat. Guard rails help keep bottles and instruments upright and on shelves. Frame is strong, welded 25mm square, plastic-coated steel, to which shelves are bolted for added strength. Top shelf is 76cmH for easy transfer of items from bench tops. Easy to move and control on rubber-tired casters. Shipping weight, 21kg(46 lb).

11-927.....95.00

Lab Wagon

Two removable polyvinyl-coated baskets

11-928

Carry odd-sized and round-bottom glassware on this lab wagon. Two removable polyvinyl-coated wire baskets protect glassware from breakage, resist rust and corrosion. Meets OSHA requirements. Shipping weight, 20kg(43 lb).

11-928.....114.00

Cathetometers

Low-Priced Model

Measures with moderate precision. Guide bar is 120cmL, readable to 0.5mm with integral vernier. Spirit level and horizontal tilting device on telescope carriage permit instrument adjustment. Telescope has 23.5mm aperture. Achromatic objective has a draw tube for 60cm focus. Auxiliary lens allows focusing to 32cm. Telescope rotates 360°. Vernier remains on scale for readings at any angle. For coarse adjustments to telescope height, raise or lower sleeve by hand. Make fine adjustments with knob.

4-725490.00

4-725

Max Accuracy Model

Ideal for reading thermometers and barometers, measuring objects too big for calipers or micrometers. Consists of support stand, locking device (for horizontal and vertical measurements), spirit level (preset for leveling accuracy), 100cm scale bar (graduated in 0.5mm increments, readable to 0.01mm with vernier) and Reed-mounted telescope (accepts standard microscope eyepieces and objectives). Telescope carriage fully adjustable. With 10 power scale magnifier. Working distance from 32cm to infinity.

Fisher-Wheeler Sieve Shaker . . .

Adjustable for 15-30cm sieves

Handles entire stack of sieves at once and shakes sieves identically on each run — unlike hand sieving. Ideal for cement, coal, glass, metallurgy, graphite, pigments, detergents, dry chemicals, pharmaceuticals.

Unique patented design produces combined vertical and horizontal motion. Sieves 15-40cmH and 15-30.5cm dia are held in place by 3 notched legs which screw down on top of sieve stack.

Shaking rate adjustable from 500-900 vibrations/min. Control switch allows continuous shaking or activates an automatic timer that can be set for shaking periods of 1-30min duration.

Ordering Information: Finished in chemical-resistant enamel. 86Lx34Wx28cmH. With carrying handles; without sieves. For 115V 60Hz. Shipping wt 61kg (135 lb).

4-9071195.00

Sieve shaker for 115V 50Hz.

4-907-11195.00

Automatic Ro-Tap Sieve Shaker . . .

For 20.3cm sieves

Electric sieve shaker reproduces circular and tapping motion used in hand sieving. Uniform mechanical action assures accurate, dependable results.

Handles 20.3cm dia sieves. Six 5.1cmH or thirteen 2.5cmH sieves with different size openings can be shaken at one time.

With 1/4hp motor for 115V 60Hz. 81L x86Wx43cmD. Without sieves. Shipping wt 204kg (450 lb).

4-909825.00

Ro-Tap Shaker for operation on 230V 50Hz available on special order.

See also:

Automatic Timer, recommended for use with 4-909 Ro-Tap Shaker.

See 6-663, page 1181.

Portable Sieve Shaker

For 20.3cm Sieves

Motor-driven shaker is rugged, yet light enough for transporting from place to place. Handles six 5.1cmH or thirteen 2.5cmH sieves with pan and cover. Sieves are actuated by specially designed mechanism to provide correct shaking action. For 115V 60Hz.

¹These sieves are not in the fourth root of 2 series, but they have been included because they are in common use.

²These sieves have opening sizes following recommendations of the International Standards Organization.

Mesh Series Sieve. See 14-295, 14-305, page 1052.

Laboratory Cements

Liquid Sealit™

Fixes rubber to glass or metal

For sealing rubber or cork stoppers, rubber tubing to glass or metal connections.

Quick-drying liquid forms perfect bond. Hardens to glossy, dark-red coating resembling sealing wax but has greater flexibility.

Resistant to heat, water, oil, and many solvents. Does not soften or become sticky when hot. Easy to clean.

Can be applied with stiff brush. Dries in 30 min. Can be handled in 2 hr. Reaches maximum hardness in 8 hr.

S-681 1/4 lb can (113g)/6.00
1/2 lb can (226g)/9.95

Alundum (RA-1139)

... Refractory cement

For embedding and insulating resistance wires in electrically heated appliances. Also for repairing muffles and electric furnace linings.

Medium coarse powder made from fused alumina. Has high thermal conductivity, chemical inactivity, low coefficient of expansion, and heat resistance to 1900°C. 5 lb (2.3kg) pk.

C-218 Ea/23.30
Case of 4/77.60

Cement/Stik™

For electrical connections

Hard acid-proof Cement/Stik™ adheres to most surfaces. Not attacked by water, common acids, carbon disulfide, benzene, gasoline, turpentine. Only mildly affected by ether, chloroform, and caustic alkalis. Dissolved by alcohol. Softening temperature approx 140°C. 1 oz (28g) sticks.

C-237 2.90

Pyseal®

For air-, watertight seals

Works with glass, porcelain, metal, rubber for making gas connections, vacuum work, making electrodes, sealing bottles and museum jars. For use where high temperatures are not involved.

Melting point, 68°-73°C. Insoluble in water, acetone, ether, and alcohol. Soluble in turpentine, benzene, and toluene. Hard but not brittle at room temperature.

Molded cylindrical sticks. 19dia x 178mmL. Wt 1 1/2oz (43g). Cellophane wrapper can be unwound as stick is used. 2 sticks/box.

C-228 Box/7.80
12 boxes, ea/6.50

See also: *Aquarium Cement.*
See 1-391-15, page 10

High-Pyseal®

For high-temp joints

For applications similar to C-228 but with 130°C melting point. Insoluble in water and acid. Soluble in benzene, benzene homologs, acetone, alcohol, esters, turpentine, and dilute alkalis.

Rectangular 1 oz (28g) stick, 18cmL.

C-227 Ea/6.70
Case of 24/122.40

Duco®

Wood, paper, cloth, porcelain

For wood, paper, cloth, porcelain, and similar materials. Transparent, waterproof, cellulose compound. 1 3/4oz (50g) tube.

4-752 Ea/.75
Pk of 12/8.10

Asbestos Cement

For furnace/refractory repairs

For repairing laboratory furnaces and other refractory materials. Or use as protective covering for countersunk screw heads in table tops, sink boards, fume hoods. Fire- and acid-proof. Plastic form for easy application. 15 lb (6.8kg) can.

1-450 12.00

Sauereisen

... Acid-proof cement

Used for ceramics, china, fuses, gauges, glass, oil burners, porcelain, receptacles, screw holes, sealing, switches. Fireproof. Withstands temperatures to 945°C. Electrically non-conductive. 1qt (946ml) can.

4-760-10 8.50

Conap Easypoxy®

Glass, metal, wood, rubber, and some plastics

Kit consists of 2 tubes, resin and hardener, that are mixed prior to use. Directions included.

Optically Clear Kit. Working life, 60-90min. At room temp, hardens in 2-4hr; cures, 30-36hr. In oven (60°C) hardens in 30min; cures, 20-30hr.

4-763-10 Ea/4.40
Pk of 10/39.50

General-Purpose Kit. Working life, 40min. At room temp hardens in 2hr; cures, 24hr. In oven (60°C) hardens in 30min; cures, 1 hr.

4-763 Ea/3.00
Pk of 10/27.00

Laboratory Cement Contd

**Dev-Tube™**

2-in-1 dispenser meters correct proportions

Used with 5-Minute® Epoxy Cement Kit (4-761). Simple plunger action. With enough resin and hardener to make 1 oz (28g) of epoxy cement.

4-762Ea/1.75
Case of 24/42.00

4-762

4-769-5

Silicone Rubber

Glass, ceramics

For caulking, sealing, forming small rubber parts, patching. Also useful for insulating electrical equipment, insulating glassware from mechanical shock, and adhering pieces of laboratory equipment. Sticks to dacron, nylon, Teflon®, organic resins, metals, and wood. Cures in 24 hr. Stability from -73° to +149°C. 7/8oz (25g) tube.

4-769-5Ea/1.45
Pk of 12/16.50

4-750

Pro-Bond® System
For bonding with similar and dissimilar materials

Permits bonding of similar and dissimilar materials, e.g. cork, gems, Teflon®, and steel. Normal bonding time, 2 min.

Includes: Bond-Fix® surface activator/cleaner — makes any surface bondable, increases bond strength, and sets bonds faster; Eastman 910® Adhesive — sets fast, no mixing or heating, 1 drop bonds 1 sq in (6.5cm²); forms bonds up to 352kg/cm² (5000psi); and Bond-Solv® cured solvent for cyanoacrylates — releases bonds regardless of age, cleans spills, removes adhesive from skin.

Ready to use. Clean surfaces with Bond-Fix. Apply adhesive

4-751

sparingly to one surface — 1 drop per sq in. Hold surfaces together for 10 to 30 sec until bond begins to set. Then allow surfaces to set firmly for 2 min. Apply solvent to remove excess adhesive from surfaces, clothes, or hands.

Ordering Information:

Pro-Bond System I. Contains 1 oz (28g) Eastman 910 Adhesive, 8 oz (224g) Bond-Fix, and 8 oz (224g) Bond-Solv.

4-750Pk/27.00

Pro-Bond System III. Contains 2g Eastman 910 Adhesive, 1 oz (28g) Bond-Fix, and 1 oz (28g) Bond-Solv.

4-751Pk/9.00

4-761

Epoxy

5-min kit

Consists of 1 tube each of resin and hardener. At room temperature, initial strength develops in 5 min; full strength in 1 hr. Dries clear. Makes 2 1/2oz (71g) of epoxy cement.

4-761Kit/3.25

1-391-15

Aquarium Cement

Ready-to-Use

Seals edges of aquaria. Prevents leaks. Will not deteriorate or change consistency with age. Not injurious to animal or plant life. Unaffected by salt water. Remains semi-elastic. No time required for setting. In 1 lb (0.45kg) cans.

1-391-15Ea/2.25
Case of 12/25.25

15-232-10

Centrifuges

Fisher Model 59 Centrifuge

No shields, trunnion rings

Swings twelve 1ml tubes horizontally

Compact, bench model centrifuge for use in any procedure requiring 1ml samples. Special, disposable polystyrene tubes fit directly into head slots, hang freely. Swing out horizontally as centrifuge spins. When head stops spinning, tubes return to vertical position without resuspending precipitates.

Automatic interlock clamps head to centrifuge shaft when spinning begins and releases it when centrifuge stops. Since head is removable for use as test tube rack, it's wise to stock several heads for consecutive sample batches.

Speed control, graduated in RCF obtained with full load of 12 tubes, gives forces to 7000xG with 12 tubes, 8000xG with 6 tubes, 10,000xG with 2 tubes. With cover closed, attains speeds of 10,000rpm with 12 tubes and 12,000rpm with 2 tubes.

Adjustable timer permits selection of operating periods to 5min. "Hold" position allows prolonged centrifugation without resetting. Ideal for operation in refrigerator or "hot" chamber, controlled with outside time-switch on power line.

Ordering Information: Die-cast aluminum head weighs 190g unloaded. Motor rubber-mounted for quiet, vibrationless operation. Anodized aluminum bowl with stain-resistant melamine-formaldehyde lid. Operates ambient to 38°C. 23Lx20Wx25cmH.

With centrifuge head and tube rack for polystyrene tubes. Without tubes. For 115V 50/60Hz, 200w. Shipping wt 7.7kg (17 lb). CSA-approved.

4-978-100.....374.00

12-Place Head

For 4-978-100. Numbered slots hold 12 disposable tubes.

4-978-143.....25.00

Disposable Tubes

For 4-978-100 Centrifuge. Polystyrene with matching caps. Conical and transparent. 1ml capacity. Can be filled without capillary. Cap prevents evaporation and contamination, minimizes electrolyte disturbances caused by gas loss during centrifuging.

4-978-145.....Pk of 500/26.00

Centrifuge Tube Rack

Holds 48 disposable 4-978-145 tubes.

4-978-105.....14.00

4-978-100

For complete selection of centrifuge tubes in glass or plastic, graduated or ungraduated, see pp 160-169

Fisher Safety Centrifuge

3 models for 15ml, micro, or semi-micro tubes
Interchangeable 6-place angle heads

Designed with low center of gravity for stability and smooth, gradual acceleration and deceleration. Coasts for 3min from full speed. Can be stopped safely in just 3sec.

Clinical, micro, and semi-micro models, all with interchangeable heads. Dynamically balanced for quiet, vibration-free rotation. Tubes completely enclosed in head. No metal shields.

RCF is 400xG — adequate for separating magnesium 8-hydroxyquinolate in just 5 min.

Ordering Information: Electrically driven by brushless sparkless motor. Aluminum heads. Enameled base 28cm wide. Height 14cm. Without centrifuge tubes. For 115V 50/60Hz.

Model	Holds 6 Tubes, Size	Cat. No.	Ea

Eppendorf Micro Centrifuge and Accessories

5-401

5-005

Hand Centrifuge

Swings four 15ml tubes at 2500rpm. Widely used by oil well gagers. Aluminum alloy body. Steel shaft. Crank disengages when hand power is stopped. Safety tube holder supports tube shields from bottom. With head, 4 aluminum shields, 2 plain 5-500 and 2 graduated 5-490 glass 15ml tubes.
5-005105.00

Precision Universal Centrifuge

Table model with horizontal head

Takes tubes 1/2 to 100ml

Widely used in clinical, food testing, petroleum, and chemistry labs. Meets requirements of ASTM tests D91, D96, D483, D484, D893, D1090 for petroleum products.

Head holds 4 trunnion ring assemblies for 15 to 100ml tubes. Adapters for tubes down to 1/2ml available on special order. Operates to 2000rpm. See chart for various tube sizes and corresponding speeds.

Ordering Information: Enameled steel housing. Cast-brass head. High torque ball-bearing motor. 56 dia x 36cmH. Without trunnion rings, shields, tubes. For 115V 50/60Hz, 330w. Shipping wt, 32kg(70 lb).

400μl	24	5-406	27.50

Clay Adams Micro-Hematocrit Centrifuges

With built-in reading scales to speed up hematocrit readings

Each capillary tube is filled with either finger-puncture or venous blood and sealed at dry end. After centrifuging, read hematocrit values directly from percentage scale under tubes. No need to move centrifuged tubes to separate reader. Magnifier swings into position over tubes for easy reading. Units are aluminum with rubber mounts.

Pre-Cal Capillaries

For 5-100-50, 5-028, and 5-028-10. Heparinized, calibrated 60mm from end. 75Lx1.47 ODx0.56mm ID. 2-676-20 tube seal recommended for sealing (see p 596). 100 tubes/vial.

5-028-5 Vial/2.65
Box of 10 Vials/24.00

Carrying Tray

As supplied with 5-100-50 centrifuge

5-100-52 50.60

Autocrit features removable carrying tray

Unique 2-part head contains hematocrit scale and removable 24-place tray in which tubes may be filled, transported, centrifuged, and read. Electric brake stops rotation in 90sec. With 24-place head, disc cover, and magnifier.

Readacrit obtains results while patient waits

Cover with safety lock must be closed before centrifuge will operate. With 6-place head, plastic cover, and magnifier.

MP Readacrit handles hematocrits and urine sedimentations

Same as Readacrit except it does urine sediment preparations, Plasmacrit screening tests for syphilis, and (using whole blood samples) provides up to 2ml serum or plasma for prothrombin time and blood chemistry determinations. With 6-place head, cover, magnifier, holder for two 4ml urine sediment tubes.

IEC Micro-Hematocrit Centrifuge

Built-in timer, pushbutton brake

For Guest-Siler-Weichselbaum method of blood cell volume testing.

Take blood sample directly from finger into heparinized capillary tube. Seal tube. Centrifuge 3 to 4min at 11,500rpm. Read blood volume percent with IEC capillary reader (5-040-25, see below).

Enclosed head has 24 numbered slots for 75Lx1.75mm dia capillary tubes. 1/2 to 15min timer automatically actuates drive as run is selected. Universal 140-watt motor attains max speed in seconds. Pushbutton brake stops centrifuge in 15sec.

Cooling air, drawn in through cover port, circulates around revolving head and is exhausted through filtering port.

Ordering Information: Permanently sealed motor bearings require no lubrication. Brushes readily accessible for replacement. Upper portion and cover are chromium-plated. Weighted enamel base with rubber feet, 28Lx25Wx23cmH. With head and

cover; without capillary tubes or hematocrit reader. For 115V 50/60Hz. UL and CSA approved.

5-040.....340.00
(IEC 3411)

Head gasket. For 5-040-15 head.

5-040-21.71
(IEC 1505)

24-place head. As supplied with 5-040 centrifuge. Holds 24 capillary tubes, 75Lx1.75mm dia. With head gasket.

5-040-1591.00
(IEC 275)

Motor brushes. For replacement in 5-040. Check centrifuge serial number before ordering. (IEC 1840 and 43653)

AA2914 to AC6200	5-040-4	3.25

Micro-Capillary Tube Reader

61cm circular hematocrit scale

Developed by Dr. A. R. Jones for reading tubes 1 to 7 dia x 13 to 75mmL. Serum-air interface and red cell-white cell interface aligned with single spiral line. After second alignment is completed, percent of blood cell volume is read directly in percent red cells. Graduations and lines engraved on stainless-steel plates. Stainless-steel stand, 20 dia x 7.6cmH.

5-040-2592.55
(IEC 2201)

Blood Collection Tubes. See pp 596, 653-656.

Count-A-Part Controls, for hematocrit determinations and other hematology tests. See p 711.

High Speed Micro-Hematocrit Centrifuge

Strumia, Sample, and Hart method . . . uses 32mm capillaries for 2min packing

Centrifuge requires only 0.006ml blood and only 2min for packing red cells. Attains speed of 16,500rpm in 10sec. Self-cooling Duralumin head has 16 numbered capillary slots. With cover, 1/5hp ball-bearing motor, automatic timer. 24dia x 24cmH. 10cm dia head. For 115VAC/DC.

5-030.....265.00

Hematocrit Reader

For use with 5-030

Place centrifuge capillary on movable plastic stage over lighted window. Align top and bottom of blood column with zero and 100% points on scale. Set cross hair at top of packed cells. Pointer shows percent of red cells. Reads blood columns 12 to 25mmL within $\pm 0.25\%$. Lamp for 115VAC.

5-030-594.00

Capillaries

For 5-030 centrifuge. Plain for treated samples; oxalated for untreated samples. Both types 32Lx0.8mm dia.

Type	Cat. No.	Box of 100
Plain	5-030-25	9.00
Oxalated	5-030-30	12.50

Uni-Smear™ Slide Spinner

Uniform blood smears in 0.5 to 2.5 seconds

5-096

Coleman Model 90 Uni-Smear™ produces smears on microscope slides for differential counting and morphological analysis. Cells are distributed uniformly in monocellular layer over entire slide surface without disturbing cell structures. Makes cells easy to study, since platelets are readily visible.

Requires blood samples of 100 to 120 µl volume. Over 95% of original blood drop is thrown off during centrifuging. Convenient disposable absorbent ring catches most of this fluid; any leftover is caught in removable plastic cup.

Ordering Information: Accepts standard pre-cleaned 25x75mm microscope slides, 0.75 to 1.35mm thick. Operates from 2000 to 6000rpm. Ten division speed control. Time control from 0.5 to 2.5sec in 10 divisions. Compact 15Lx20Wx20cmH. Weighs only 5.4kg. With absorbent cup liners and collector cup. For 115/230V 50/60Hz.

5-096.....625.00

Supplies for Uni-Smear™ Spinner

Cup Liner. Absorbent paper liners for collector cup. Retains excess fluid

thrown off by centrifugal force. One liner withstands; use with 20 to 40 slides.

5-096-2.....Pk of 50/7.90

Collector Cup. Washable plastic cup for lining lower half of spinning chamber. Easily removed for cleaning.

5-096-3.....Pk of 3/4.40

Cover Shield. Washable plastic removable unit makes cleaning Uni-Smear easy. Helps maintain correct spinning chamber conditions.

5-096-4.....Pk of 3/4.40

Slide Holder. Locks slide in position during spinning. Directly coupled to drive motor shaft. Easily removed for cleaning.

5-096-5.....12.60

Cup Support. Ring-shaped plastic sponge fits under collector cup. Provides tension to form seal at top of spinning chamber.

5-096-6.....Pk of 3/3.20

Precision Hi-Speed Centrifuge

Clinical, micro, semi-micro range
8 tubes 1/2 to 15ml at 5400rpm

4-979

Operates to 4125xG with speeds from 1800 to 5400rpm. Enclosed conical head suspends tubes at fixed 50° angle. Eight 15ml holders accommodate 15ml straight and tapered tubes. Tubes from 1/2 to 5ml can be accommodated with special adapters (not supplied).

Ordering Information: 1/8hp motor. Friction leather brake. Enameled steel base. One-piece cast-aluminum head. 31dia x 20cmH. With head, eight 15ml aluminum tubes, 4 suction feet, speed control, leather brake. For 115VAC/DC, 300w.

4-979325.00
(Precision 67390)

For 230V operation, see 9-497C transformer, p 281.

Sero-Fuge™ I and II

5-100-5

For microscope slides see 12-550A on p 824

Triac™ Clinical Centrifuge, Operates in Three Modes

3-speed, combination head for micro-hematocrits, urine, blood tubes

5-100-80

Micro-hematocrit mode. Spins 12 Pre-Cal™ micro-hematocrit tubes (5-028-5, see p 138) or 12 Accu-Stat™ micro blood collection tubes for 3min at 10,300rpm (11,700xG). Tubes are placed directly in micro-hematocrit head. Hematocrit values are read directly from built-in scale in head without removing tubes. Scale has colored areas denoting average, normal, and abnormal values for both male and female. Scale range, 0 to 80%. Uses either finger puncture or venous blood.

Urine mode. Spins 8 routine urine tubes (17x120mm) for 6min at 2300rpm (660xG). Tubes are held in 4 trunnions (accommodating 2 tubes each) that are easily inserted into micro-hematocrit head.

Blood mode. Handles 8 Vacutainer® evacuated glass tubes (either 15, 10, or 7ml) and spins them for 5min at 3800rpm (1800xG). Tubes are held in 4 trunnions that are easily inserted into micro-hematocrit head. With appropriate adapters (5-100-86 and 5-100-88), you can also use 8 each 2 or 3ml Vacutainer tubes, 10x75mm or 12x75mm culture tubes or 8 Bio-Dynamics 10x57mm plastic centrifuge tubes.

Easy pushbutton selection of operating mode and corresponding speed. Speed controls and appropriate time settings are color-coded. Eliminates chance of sample loss from excessive centrifugation.

Centrifuge will not operate when top is open . . . if top is opened during operation, centrifuge automatically shuts off. Shatter-proof polycarbonate cover has safety lock. Pushbutton 15-min timer can be preset for

repeated spinnings at same time setting. Pushbutton brake. Motor requires no lubrication.

Ordering Information: With micro-hematocrit head, 4 trunnions (5-100-82), starter pack of 1 vial Pre-Cal tubes, tray of Seal-Ease™ sealing clay, 8 urine tubes, Redi-Lance™ lancets. 36Lx32Wx25cmH. 115V 60Hz, 132w. Shipping wt 17.2kg (38 lb).

 (Clay Adams 0204)

Centrifuges

For blood grouping, typing, cross-matching

Perform Coombs test and cell washing procedures.

Detachable with light finger pressure, heads serve as holders in which tubes can be filled, centrifuged, transported, incubated, and emptied without individual handling. Reduces errors. Use of several heads is recommended for simultaneous centrifuging and incubating operations.

Interchangeable 6- and 12-place heads. Six-place head (available on special order) suitable for serum and red cell separations in original blood collecting tubes eliminating need for transferring samples. Tubes held at fixed 45° angle in 6-place head. In 12-place head, tubes swing out at 45° angle and assume vertical position at rest.

Ordering Information: Two models, both with 12-place unbreakable plastic head with numbered slots, 12 Sero-Tubes (10x75mm), see-through shockproof plastic cover, timer.

Dynac™ and Dynac II Centrifuges

5-100-25

5-100-26

Handle micro to 100ml tubes

Both the standard model Dynac™ and the deluxe Dynac II accommodate 8 interchangeable heads for a wide range of clinical and industrial applications. Four of the heads are free-swinging horizontal style, four are 52° angle type. All heads have numbered slots for quick tube identification. Positive attachment of heads to motor shaft prevents unlocked heads from spinning.

Transistorized electronic control adjusts speed for each head. Automatic 30-min timer has HOLD position for continuous running. Electric brake allows quicker stops if desired.

Compact. Portable. Fits into standard refrigerators and may be placed in cold room for low temperature centrifugation.

One-piece heavy-gauge aluminum guard bowl on heavy, stable base. Baked enamel inside and out. Transparent, shatterproof polycarbonate cover. Lubricated ball-bearing motor.

Either model is available as a basic centrifuge (base unit) without head and shields. The standard model Dynac can also be ordered under any of 8 catalog numbers for complete assemblies of base unit, head, shields, and tubes.

Comparable assemblies for the deluxe Dynac II must be ordered by specifying separate catalog numbers for desired head, shields, and tubes in addition to the 5-100-26 Base Unit.

Ordering Information

Dynac Centrifuge. Base Unit, only. Standard model. Maximum speed 3330rpm (actual maximum depends on load). Electronic speed control, electric brake, 30-min timer with bell. Dimensions 38diax47Wx25cmH. Without head, shields, or tubes. 115V 50/60Hz, 160w.

5-100-25342.50
(Clay Adams 0101)

Dynac II Centrifuge. Base Unit, only. Deluxe model with more sophisticated controls, extra convenience and safety features. Electronic speed control for 500 to 3600rpm (actual maximum speed depends on load). Direct-reading tachometer with ±5% accuracy, 30-min electric timer. Safety latch prevents opening cover until centrifuge has stopped. Illuminated power switch. Full-width control panel at front of base. Vibration isolators for extra-quiet operation. Dimensions 48Lx41Wx32cmH. Without head, shields, or tubes. 115V 60Hz, 300w.

IEC Tabletop Centrifuges

Clinical Model

300ml (6x50ml) max load

Head	Max rpm	Max rcf
Hemato-Kit	7100	5130xG
Angle	4750	2575xG
Horizontal	4000	2000xG

Ideal bench unit for physician's office. Accepts 3 angle and 2 horizontal heads. Hemato-Kit (5-110) adapts centrifuge for micro-hematocrit testing. Easily converted to basket-type chemical centrifuge by removing guard bowl and adding chemical guard (IEC 1399) and draining chamber (IEC 1320) to base. Seven-step transformer type speed control. Cool operation.

Ordering Information

Clinical and HNS Models. Both have series-wound motor with sealed, lubricated bearings. Steel guard bowl and cover. Enamel finish. Rubber feet. Units comply with NE Code and are CSA listed. Without heads and other accessories.

Model	IEC No.	Max. Vol.	Dimensions	Voltage	Shp. Wt.	Cat. No.	Ea

Motor Brushes. For replacement in 5-101-5 centrifuge.
5-109-10Pr 6.11
(IEC 1780)

Hemato-Kit

For micro-hematocrit testing with IEC Clinical (5-101-5 and 5-101-6) and HNS (5-111) centrifuges. Blood cells are packed in 10min at 7100rpm. Consists of 24-place head for capillary tubes 1.75dia x 75mmL, cover, adapter hublock, wrench for attaching and removing head.
5-110.....104.00
(IEC 930)

Model HNS

600ml (12x50ml) max load

Head	Max rpm	Max rcf
Hemato-Kit	7800	6200xG
Angle	4900	2750xG
Horizontal	4150	2250xG

Accepts angle and horizontal heads, including oil and Babcock testing heads and multiple carriers. Dial speed control provides $\pm 2\%$ repeatability. Electric tachometer indicates speed within $\pm 2\%$. Electric timer stops centrifuge at selected time from 2 to 60min. Electric brake reduces coasting time 50%.

Accessories for Clinical and HNS Models are on pp 148-159.

Milk Centrifuge

Swings 24 bottles

For 16.5cmH milk test bottles. Cast-aluminum bowl. Balanced for smooth operation. Heavy-duty motor bearings. Mirror-ground shafts. Aluminum bottle cups. With heater, switches, brake. 51dia x 32cmH. Shipping wt 25kg(54 lb). 115V 60Hz.
12-662207.00
For milk test bottles, see p 169.

Whisperfuge™ Centrifuge

180ml (12x15ml) max load

Dual-speed control. 3000rpm (1000xG) for cell washing and rapid separations. 2000rpm (500xG) specifically for final spin in Coombs testing, blood grouping, cross-matching. Maximum load 180ml (12x15ml).

Twelve-place numbered rotor holds tubes from 10x75mm to 15ml conical at fixed angle. Rotor may be removed to hold tubes during filling, transport, incubation. Polycarbonate shields may be filled with ice or warm water to maintain temperatures during centrifugation. Zero to 5min timer permits timed or continuous operation. To stop during a spin, rotate timing knob to zero. Centrifuge stops in 15sec without braking.

Ordering Information

Whisperfuge™ Centrifuge. Reinforced polyethylene housing. Dimensions, 26Lx 26Wx25cmH. Aluminum rotor and base plate. With rotor, cover, 12 shields. Shipping wt 6kg (13lb). Without tubes. Unit complies with NE Code and is CSA approved. 115V 60Hz.
5-112.....249.00
(IEC 1385)

IEC Portable Non-Refrigerated Centrifuges

Model K

5200 rpm
4275xG
6000ml (6x1000ml)

Rugged "workhorse". Guard bowl dia 61cm. Accepts variety of heads including 16-place, 50ml horizontal.

Stepless autotransformer speed control provides precise repeatability. Electric timer, range 2 to 120min, with HOLD switch for longer runs. Tachometer, range 0 to 6000 rpm, is direct contact type, easily disengaged. Electric brake stops rotation in 1/2 the normal coasting time.

Rubber gasket mountings and vibration-dampening mounts on base minimize vibration. Removable access plates. Four casters. Complies with NE Code. UL and CSA approved. Without heads and other accessories.

Accessories for IEC portable non-refrigerated centrifuges are on pp 148-159.

Ordering Information

Portable Centrifuges. All models have speed control dial and tachometer. Steel construction. Chemical-resistant, high-impact guard bowl. Baked enamel finish. Supplied without heads and head accessories, listed on pp 148-159.

Model EXD

5200 rpm
4275xG
6000ml (6x1000ml)

Same as Model K but without casters, timer, and brake. Complies with Class 1 Group D explosion-proof requirements. Control housing and motor connected through conduit and explosion-proof fittings. For "atmospheres containing gasoline, petroleum, naphtha, benzol, lacquer solvent vapors, or natural gas." Without heads and other accessories.

Model CU-5000

5700 rpm
4575xG
4000ml (4x1000ml)

General purpose. Accommodates broad range of accessories for samples from micro size to 1000ml bottles.

Programmed operation: just set speed, time, and braking mode. Push start button. Full centrifuge cycle is then completely automatic.

Dual range timer set table in 1/2min increments to 15min and in 5min increments to 105min. Dual braking system with full or half braking or free coasting to suit specific applications. Solid-state feedback speed control. Continuous reading tachometer. Brush wear indicator warns when 20 to 50 operating hours remain on brushes.

Automatic acceleration at controlled current, maintained despite normal line voltage fluctuations. Safety cover system prevents opening until rotor stops, precludes operation unless cover is securely closed. Large 53cm guard bowl, with wide access for easy loading and unloading.

Mounted on 4 casters. Without heads and other accessories.

IEC Refrigerated Centrifuges

Model CRU-5000

5700rpm
4575xG
4000ml (4x1000ml)

Portable, compact, versatile model. Accommodates broad range of accessories for samples from micro size to 1000ml bottles. Programmed operation. Simply set speed, temperature, time, and brake mode. Push start button. Centrifuging cycle fully automatic. Exactly reproducible. Dual range timer settable in 1/2min increments to 15min and in 5min increments to 105min. Dual braking system with full or half braking or free coasting to suit specific applications. Solid-state feedback speed control. Continuous reading tachometer. Brush wear indicator warns when 20 to 50 operating hours remain on brushes. Automatic acceleration at controlled current, maintained despite normal line voltage fluctuations. Safety cover system prevents opening until rotor stops, precludes operation unless cover is securely closed. Large 53cm guard bowl, with wide access for easy loading and unloading. Mounted on 4 casters. Without heads and other accessories, see pp 148 to 159.

Ordering Information: See chart, next page.

Model PR-6000

6000rpm
7275xG
6000ml (6x1000ml)

Medium-speed model for general purpose and blood bank centrifuging. Completely automated. Handles large volumes including 6 liter rotor (5-426-5) that reduces large volume blood separation time by 60%. With continuous flow zonal rotor (5-426-3), exhibits ultracentrifuge capabilities at only 6000 rpm. Flexible drive shaft eliminates need for sample balancing. Dual timer (0 to 15 or 0 to 105min) has "Not-Timed" position for runs

not requiring automatic time control. Variable electric brake permits selection of deceleration force on 1 to 9 scale. "Off" position provides full coast stop. Rotor-stopped light indicates when run is over. Safety interlock cover won't release until rotor stops completely. Evaporation coils and insulating barrier in guard bowl maintain temperature control. Temperature readout of -10° to +30°C in 1°C increments. Without heads and other accessories. Ordering Information: See chart, next page.

Blood Bank Heads for 5-426 Centrifuge

(Note: 5-425-10 head is also usable with 5-425-50 centrifuge.) Designed for blood component preparation in plastic blood bags to obtain packed cells, platelet-rich plasma, plasma concentrate, or cryoprecipitate. 5-426-5 head obtains

platelet-rich plasma in just 1.75min at 4000 rpm. Speed-force values in table pertain to Model PR-6000. In Model CRU-5000, 5-425-10 head operates at 3800 rpm, 3350xG. Each head is complete with set of aluminum cups.

IEC No.	Wind-shielded	Total Capac	Max. RPM	Max. RCF	Cat. No.	Ea
977 (4 places)	yes	4x600ml bags	5500	7000	5-425-10	755.00

981 (6 places)	yes	6000	4200	4775	5-426-5	995.00

Replacement 1000ml cup. As supplied with 5-425-5 head. 98.5 IDx125mmD.
5-425-6168.40
(IEC 401)

Model B-20A

20,000rpm
45,500xG
1500ml (6x250ml)

High speed. Handles routine batch preparative separations. For zonal centrifugation, a zonal modification kit and zonal rotors are available on special order.

Spins angle and horizontal heads (including 2 swinging buckets). Master knob controls operation of all systems. Motor is belt-driven and permanently lubricated. Timer has "Not-Timed" position for runs not requiring automatic time control. Elapsed time indicator shows total hours of operation. Brush change indicator denotes need for brush replacement. Convenient work area adjacent to centrifuge chamber.

Removable front panel. Four casters. Front 2 lock. Special cover design provides centrifugal stability. Without heads and other accessories.

5-431

Ordering Information

Refrigerated Centrifuges

All models have dial speed control, dial temperature selector, and temperature read-

out indicator. All are solid steel frame construction with baked enamel outside finish. Supplied without heads and head accessories.

Continuous Flow Zonal Rotor for Use with PR-6000 Centrifuge

For isolating, concentrating, and purifying large volumes of dilute particle suspensions with PR-6000 centrifuge. Ideal for subcellular organelles and sedimentation coefficients of 2000 and up.

Operates on density gradient, differential or batch zonal operating modes. Using density gradient techniques, up to 100-plus liters of 1 μ m dia particles can be purified in 8hr. In differential mode, particles are passed through rotor depending on their sedimentation coefficient. Conventional mode obtains up to 550ml of packed particles of all densities. With complete modification kit.

5-426-33550.00
 (IEC 1099)

Accessories for IEC refrigerated centrifuges are on pp 148-159.

IEC Rotor for Racked Tubes

For centrifuging multi-sample feed trays from automatic analyzers, RIA systems

Just snap a multi-sample feed tray from your AutoAnalyzer®, liquid scintillation counter, or RIA pipetting system into the 2-piece carriers of these horizontal rotors. Then put rotor directly into an IEC centrifuge. Samples remain in instrument's linear trays throughout centrifugation. Eliminates tube-by-tube sample transferring. Increases efficiency of any automatic procedure. Both rotors fit IEC Models UV*, K* (Size 2), CU-5000*, CRU-5000, PR-J, PR-6, PR-6000 centrifuges.

Rental and leasing agreements are available for purchase of capital equipment. Terms can be individually suited to the customer's needs. For further details, contact your local Fisher sales representative.

To quickly locate the exact items you want, Catalog 77 has three handy indexes beginning with blue pages. These indexes list items alphabetically, numerically by Fisher catalog number, and by the catalog number of Fisher's major suppliers.

How to Order
Use the catalog number, a brief description of the item and the quantity you desire. Be sure to include the letter designation where it occurs in a catalog number, as it differentiates sizes or models of the same item.

Hand Tachometer

Determines motor speed of centrifuges and stirrers. Can also be used to measure power tool and machine speeds.

Hold tachometer in line with rotating surface, exerting slight pressure on rubber tip. Speeds from 100 to 4000rpm are indicated on 2-color dial face.

With cup tip for measuring speeds of flat shafts and cone tip for shafts with center hole.

5-09728.50

Extension shaft. Length 30.5cm. For 5-097 Tachometer. For use when rotating surface is hard to reach.

5-097-57.50

5-097
Fisher Scientific Company

Centrifuge
Tachometers

Photoelectric Tachometer

Checks centrifuge speed

Accurately monitors speed of centrifuges and other lab equipment. Hand held. Battery operated. No contact with moving parts. Probe may be held as far as 31cm from instrument. Operates on 4 ranges: 0 to 1000, 3000, 10,000, and 30,000rpm. Direct reading scale accurate within 1½% of full scale.

Convenient 7.6Lx15Wx20cmH. Weighs only 0.9kg. Aluminum with enamel finish. Built-in voltage checker. 61cm probe cable.

5-028-25220.90

Carrying case. For 5-028-25.
5-028-2628.25
(Clay Adams 5206)

Tape spots and calibration stickers. For 5-028-25 tachometer.

5-028-27Pk of 60/13.50

5-028-25

Mechanical Tachometer

For IEC centrifuges

Helps keep your centrifuge below maximum allowable speeds. Also helps you reproduce exact test conditions.

Rubber tip is interposed between top end of centrifuge motor shaft and tachometer stem. Friction causes stem to rotate at same speed as head. Speed indicated in rpm on airplane-type dial graduated at each 100rpm from 0 to 6000rpm.

When ordering, state size, type, and/or model and serial number of centrifuge on which it is to be installed, type of head being used, and distance in inches from centrifuge cover to top end of motor shaft.

Snap-On Caps. For 5-527-45 tubes.

2-544-11Pk of 1000/8.00

Polystyrene Tube with Molded Graduations

Graduations at 1/4, 1/2, and every ml unit. Tolerance: from 0 to 1 ml, ± 0.1 ml. From 1 to 3ml, ± 0.15 ml. Above 3ml, ± 0.20 ml. OD, 17mm. L, 120mm. 125 tubes per plastic bag. 15ml capacity.

5-498Case of 500/28.55
(Kimble 58325)

5-498

Graduated Polystyrene

Fits standard centrifuge heads and withstands normal (medium) operating speeds. Tested for accuracy, leakage, and sterility. 15ml capacity. In styrofoam trays of 50 tubes.

5-538-50Case of 500/22.53
(Corning 25300)

5-538-50

Graduated Polypropylene . . . for Large Volumes

Extra-strength polypropylene. Useful for centrifugation in trypt-

sinization of primary tissues. Fits standard centrifuge heads and withstands normal (medium) operation speeds. 250ml capacity. Accurately graduated to 125ml.
5-538-52Case of 100/18.68
(Corning 25340)

Graduated . . . Polypropylene Tube, General Purpose

For general lab centrifuging, specimen collecting, and trans-

porting. Opaque, resilient polypropylene. 50ml capacity. Accurately graduated. Tested for speed tolerance and accuracy.

5-538-54Case of 500/46.92
(Corning 25320)

Polystyrene, with Screw Cap

Clear polystyrene, disposable sterile conical tube for general centrifugation. Screw cap has special plug for positive seal.

Graduated every 0.1ml from 0 to 1 ml and every 0.5ml from 1 to 15ml.
5-527-90Case of 500/55.22
(Falcon® 2095)

15ml Capacity, Polystyrene

Fits standard centrifuge heads and withstands normal (medium) operating speeds. Constructed of durable polystyrene. Accurately

graduated. Sterile with leakproof cap. In styrofoam trays of 50 tubes.
5-538-51Case of 500/54.00
(Corning 25310)

250ml Tube, Polypropylene

Extra-strength polypropylene. Useful for centrifugation in trypt-

sinization of primary tissues. Fits standard centrifuge heads and withstands normal (medium) operation speeds. 250ml capacity. Accurately graduated to 125ml. Sterile with polyethylene screw cap.

5-538-53Case of 100/23.22
(Corning 25350)

50ml Tube . . . Tough, Disposable

For general lab centrifuging, specimen collecting, and transporting. Opaque, resilient poly-

propylene. Accurately graduated. Tested for speed tolerance and accuracy. Sterile with cap. In styrofoam trays of 25 tubes.

5-538-55Case of 500/93.14
(Corning 25330)

5-560

Polyethylene Micro Sample Tubes

Excellent for transporting samples for micro analysis. Withstand forces of ultra centrifuges. Two capacities.

Case of 2/50.14
(Corning 6944A)

Chromatography Hanger Rods

Chromglides are spring-loaded glass expansion rods which anchor themselves securely against inside walls of chromatography tanks. Fit tanks of any shape and width within the rod length range. Gripping strength is adequate to support glass TLC plates.

Rod consists of two telescoping sections containing a spiral stainless-steel compression spring. Grips on ends of rods are soft, inert plastic.

Length Range	Cat. No.	Ea
23 to 38cm	5-719-11A	12.00
14 to 25	5-719-11B	10.00

Gas Chromatographs. See pp 441-446

Chromclips

Hold Strips in Tanks/Ovens

Polypropylene clips perfect for dozens of gripping and hanging applications. Great hangers for TLC plates or photographic negatives. Spring action of tiny intermeshing teeth securely grips any item up to 8mm thick. Slip clips over rods up to 16mm in diameter.

Not affected by low temperatures or heat to 190°C. Inexpensive; disposable. White.

5-719-10.....Box of 100/12.00

Chromatocab® Chromatography Cabinet

5-719-420

Features 2-dimensional separations on sheets to 58cm²

Set up a run in minutes: fold paper, apply samples, insert solvent troughs and sheets in cabinet, pour solvent, close Chromatocab® lid. Handles 8 sheets at once.

Ordering Information: With Formica lid with stoppered holes for solvent refilling; triple-pane window, four 225ml glass troughs with anchor rods, 2 glass anti-siphon rods, 2 glass supporting rods, stainless-steel drawer for holding troughs. Insulated for temperature constancy. 73Lx49Wx69cmH. Shipping wt. 45.4kg (100 lb).

5-719-420950.00
(SMI 1250)

Glass solvent assembly for replacement in 5-719-420. 225ml trough with 4 glass anti-siphon rods and glass anchor rod.

5-719-42235.50

Clips secure wet chromatograms for drying. Spring action stainless-steel clips, 2.5cm long, attach sheets to rods up to 10mm dia. Will not mark or tear paper.

5-719-7Pk of 12/6.75

Chromato-Vue® Portable Darkrooms

For fluorescent analysis of paper and thin layer chromatograms

For Plates to 20cm²

Slip chromatography plates up to 20cm² into Chromato-Vue® and turn on light source. Separations are instantly visible. Two UV light sources (one long wave; one short wave) permit observations of steroids, porphyrins, lipids, vitamins. Contrast control filter provides increased contrast and eliminates eye fatigue due to fluorescing. Soft rubber side panels permit easy access to interior.

Ordering Information: Made of high-impact styrene and steel. 25Lx36Wx36cmH. For 115V 60Hz.

5-719-590269.75
(Ultra-Violet CC-20)

5-719-590

For Larger TLC and Paper Chromatograms

Same as 5-719-590 cabinet but for larger thin layer or paper chromatograms. Two high-intensity UV light sources (one short wave; one long wave). Beaming angles adjustable. Alzak reflectors concentrate radiation on chromatograms. Viewer plate slides 10cm left or right for maximum observation. May be used with photographic equipment.

Ordering Information: 39Lx62Wx38cmH. For 115V 50/60Hz. Shipping wt 13.6kg (30 lb).

5-719-600449.00
(Ultra-Violet C-5)

5-719-600

Economy Model with Removable Light Source

Great for UV fluorescence or absorption demonstrations. Also for viewing TLC separations. Compact and economical enough for multiple installations in school science labs.

Separate short wave and long wave light sources in one lamp. Lamp is removable for hand-held applications; has 2 snap-off filters that can be removed for examination of rare earth elements or inducing photochemical reactions.

Cabinet has contoured flexible viewing port with built-in contrast control filter — absorbs all UV and "blue haze" interference for safe viewing. Removable bottom panel lets you place cabinet directly over large objects such as fluorescent mineral specimens.

Ordering Information: 22Lx25Wx24cmH. Meets OSHA electrical standards. 110V 60Hz.

5-719-580129.75
(Ultra-Violet CC-15)

5-719-580

Chromatographic Separation Tubes

Choice of Three Models

One-Piece with Disc to Support Column Packing

Sealed-in coarse fritted disc. PYREX® brand. Large dia outflow tube permits solvent to flow smoothly without smearing definition bands. Tooled tops for rubber stopper fit. Outflow tube long enough to protrude through rubber stopper. (Corning 38450)

I.D.xL	Cat. No.	Ea	Case of

Fracto-Scan UV Monitor

Identifies
chromatographic
fractions

5-725-106

Fracto-Scan UV Monitor is used with fraction collectors to detect UV absorbent chromatographic fractions as they flow from column into collection tubes. Consists of electronic control unit and optical module that mounts on fraction collector. Requires 10mV, 100mV, or 1V recorder for readout.

Column effluent is passed through flow cell in optical module where its light absorbance is measured and recorded on a time basis. When effluent contains UV absorbent compounds, marker on recorder indicates presence of compounds in their respective collection tubes.

Dual beam design permits measurement of differential between buffer and effluent from chromatographic column. Despite changes in buffer concentration, base line is maintained.

Ordering Information: Control unit is 27Lx17Wx16cmH. Optical module is 18Lx11Wx13cmH. Electronics suitable for cold room operation. With flow cells, 280nm narrow band pass filter, recorder connecting lead, and instruction manual. For 110/115V 50/60Hz.

5-725-1061610.00
(Buchler 3-5100)

UV light source. For use with 5-725-106.

(Buchler 3-5106)

See page 1007 for recorder.

Automatic Fraction Collectors

Feature time, drop, and volume collection modes

Holds 400 test tubes

Fractomette® 400 Fraction Collector dispenses successive fractions directly into collecting tubes from a liquid chromatography column mounted above instrument. It eliminates danger of cross-contamination. Collection platform accommodates 40 racks, each holding 10 test tubes.

Set selector switch for desired collection method: drop counting, time, or volume dispensing. Set controls to collect from 1 to 9999 drops in each tube, in 15 second intervals up to 41 hours, or for collecting in volumes from 1 to 15ml.

Test tube racks automatically move test tubes to filling position under columns. As each test tube receives specified quantity of fraction, solenoid valve interrupts column flow until next tube is moved into position. Remaining tubes are filled in similar manner until magnetic cap on last tube automatically terminates operation.

Ordering Information: Has aluminum base, 62Lx44Wx19cmH, with stainless-steel platform. Electronics sealed for cold room operation. With 42 ten-place plastic test tube racks for test tubes 12-18 ODx75-180mmL, 6 seven-place stainless-steel test tube rack trays, acrylic dust cover, solenoid-operated Teflon® safety valve (terminates column flow if power fails), drop counting photocell search unit, 5-10ml adjustable siphon. Shipping wt 36kg (80 lb). 115V 60Hz.

5-725-1252183.00
(Buchler 3-4400)

Fractomette 400

5-725-125

Holds 200 test tubes

Fractomette Alpha 200 Fraction Collector is similar to 5-725-125 above but its lift-off collection platform accommodates 20 racks holding ten 12 to 18mm OD test tubes each. Chromatographic column containing sample is mounted above platform. Successive fractions are dispensed directly into tubes on platform.

Ordering Information: Occupies less than 1394cm². Can be placed in refrigerator for low temperature use. Solid-state circuitry and digital display. Aluminum base 42Lx26Wx14cmH with removable stainless-steel collection platform. With twenty-two 10-place plastic test tube racks for 12 to 18mm OD test tubes, three 7-place stainless-steel test tube rack trays, aluminum support rod assembly for mounting columns and accessory equipment, dust cover, solenoid-operated safety valve, drop counting photocell search unit, 5-10ml siphon, overflow detection device. Shipping wt, 22kg (48 lb).

5-725-230 with 5-725-240

Automatic Fraction Collector

Add modules as needed

Purchase only needed units. Your choice of 3 turntables (150 or 240 test tubes or 117 scintillation vials). Your choice of 3 collection method units (volume, time dispensing, or drop counting).

SMI fraction collector automatically collects up to 240 equal volumes of liquid sample flowing from chromatographic column. With column mounted above instrument, collector base unit delivers equal volumes of liquid systematically to turntable of test tubes. Filling of each tube electronically triggers turntable to next empty tube until tubes are filled. At end of run, dispenser moves off turntable to discharge into waste container. Tubes are removed for analysis. Requires 61x91cm bench space.

Fraction collector base unit. Heavy cast-aluminum basic support unit with built-in turntable motor, indexing circuit, detector-accessory sockets, method selection switch, and manual indexing switch. 115V 60Hz.
5-725-200A.....875.00 (SMI 12050)

Turntable modules. Anodized aluminum. With deflector for accurate placement of dispenser, and drive disc for synchronization of turntable movement with

5-725-200A base unit. 5-725-202 turntable designed for scintillation vials; 5-725-210 and 5-725-212 for test tubes.

SMI No.	Turntable Dia	Capac	Tube O.D.xH	Max. Vol.	Cat. No.	Ea
12064	61cm	117 vials	28x61mm	20ml	5-725-202	264.00

Instant Thin Layer Chromatography Kit

Heart of this Gelman ITLC system is sheet of glass cloth impregnated with adsorbent.

Spot sample onto sheet using spotting guide illustrated (space for 11 samples). Sheet is then placed in chromatographic chamber containing developing solvent. As solvent rises through glass cloth by adsorption, properties of the adsorbent act to retard sample components. This retardation, proportional to various components in each sample, causes components to distribute themselves on glass cloth behind solvent front.

Solvent is permitted to rise 10-12cm above the spotted sample to point scribed on spotted guide.

To evaluate separated components (usually colorless), special visualization techniques are employed, e.g. UV light and indicator sprays.

Distance components travel and their reaction to visualization techniques aid in identification. Test results can be compared with results obtained when known substances are spotted on ITLC sheet as controls.

Ordering Information: Includes 50 silica gel sheets (for lipids, barbiturates, steroids). 25 silicic acid sheets (for amino acids, sugars, vitamins, thin layer electrophoresis, and drug detection). And 25 SAF sheets (same as silicic acid plus bonus of a fluorescent indicator), recommended for UV detection of DNP amino acids and vitamins.

Kit also includes 5-729-88 spotting guide; 5-729-75 chromatography chamber; box of 5-729-90 solvent saturation pads; 25ml of reference dye mixture; 60ml ninhydrin spray reagent for amino acids and amines; ITLC introductory manual.

5-729-83126.00
(Gelman 51306)

Spotting Equipment for TLC

Spotting Guide. Clear plastic with numbered slots for 11 samples on 20x20cm TLC plates. Reference lines mark final position of solvent front.

5-729-8842.00
(Gelman 51333)

Spotting Guide is plastic sheet with numbered application slots for up to 19 samples and standards. Feet hold guide clear of TLC plate. Ruled lines show positions of spots and solvent front. Circles used to estimate spot areas.

5-718-1018.20

Other pipets, see pp 936-960.

5-729-50

CHROMAGRAM® Developing Apparatus

Complete TLC lab in a package

CHROMAGRAM developing apparatus makes TLC separations on 20x20cm Mylar sheets coated with adsorption or partition media.

Use micro pipet to spot samples at bottom of CHROMAGRAM sheet. Each sample component migrates through adsorbent layer on Mylar. Migration distance characteristic of sample component identity. This principle permits qualitative analysis.

To process CHROMAGRAM, sandwich and clamp it between glass plates. Stand upright in trough filled with developing solution. Solution migrates across sheet to evaporation point.

Finally, dry CHROMAGRAM and process as desired. Some are sprayed with reagent and placed under UV light to make separated spots visible. Others are exposed to selected wavelengths of light to cause sample fluorescence. Some fractions are evaluated by densitometry.

Ordering Information: Kit includes 5-729-52 plate set; 5-729-59 clips; 5-729-54 solvent trough; 5-729-55 trough cover; 5-729-57 easel. Without CHROMAGRAM sheets, spotting device, or reagent sprays. These items are listed on pages 186; 179; and 184 respectively.

Sandwich Chambers

Faster equilibration

More reproducible Rf values

Small volume reduces solvent vapor equilibration time, gives more reproducible transport (Rf) values than larger chambers. Developing chamber formed by glass plates separated by Teflon® gasket. Stainless-steel solvent reservoir is Teflon®-lined. Solvents are in contact only with Teflon® and glass.

Can be used for continuous development techniques by inserting filter paper between plates at top of chamber, so solvent can escape into atmosphere by wick action. Front advances continuously. Solvent is replaced through capped opening in reservoir.

Analytical sandwich chamber. Can be used for 20x20cm plate 2mm thick. Not recommended for Mylar, glass fiber, or paper sheets. Solvent reservoir holds 75ml. Chamber and stainless-steel stand 20Wx13Hx15cmD. Wt 1.4kg (3 lb).

5-718-2566.00

Preparative sandwich chamber. Holds 40x20cm plates 4mm thick. Reservoir capacity 150ml. Measures 41Wx13Hx15cmD. Wt 2.7kg (6 lb).

Drug and Chemical Blood

Send for free copy today

Two-colored notebook-size chart, published by Fisher, is available without charge to toxicologists and other forensic and life science personnel. Almost 180 different substances listed. From Acetaminophen (Tylenol) to Zoxazolamine (Flexin). For each, chart gives **THERAPEUTIC OR NORMAL... TOXIC... and LETHAL** levels in blood serum or plasma. For your free copy, check 5 on reader service card at end of blue index pages.

5-725-867

Seprachrom Micro Chambers

Pre-loaded for ITLC. . . Disposable

Completely disposable micro chromatography chambers. Each pre-loaded with a ready-to-spot ITLC sheet — glass micro-fiber impregnated with one of 3 types of adsorbent.

Advantages are: fast, sharp separations, rapid spotting, easy handling. Eliminate problems associated with coated plates. Chamber accommodates 4 samples at once.

Applications include: SA — amino acids, sugars, vitamins, thin layer electrophoresis, drug detection; SG — lipids, barbiturates, steroids; SAF — DNP amino acids, vitamins.

Supplied with general procedure guide.

Spotting Pipet for ITLC sheets. See 5-725-865, page 182.

5-725-872

Disposable TLC System

For amniotic L/S ratio

Seprachrom L/S Ratio System is a fast, efficient method for determining lecithin/sphingomyelin ratio in amniotic fluid to assess fetal pulmonary maturity. No interference from other phospholipids. Results are highly specific, reproducible, easy to interpret. Test can be completed in 60 min.

System based on disposable Seprachrom micro chromatography chambers, preloaded with ITLC sheet. Spots of less than $0.4\mu\text{g}$ are detectable (actual spot quantities are well above this level). Faster, more specific, easier to use than competitive systems. Components stable at room temperature.

Ordering Information: Consists of 10 Seprachrom chambers, fifty $5\mu\text{l}$ spotting pipets, Chromist spray unit, 45ml developing solvent, 45ml detection reagent, instructions.

5-725-87248.00
(Gelman 51247)

Lecithin/Sphingomyelin Control

Freeze-dried, assayed control derived from human amniotic fluid. Adjusted to approximate 3:1 L/S ratio. For Seprachrom L/S Ratio System. Applicable also to liquid chromatography procedures. Pack of six 3.0ml bottles, sufficient for total of 12 tests.

5-725-874Pk/24.00
(Gelman 51248)

Level Data Chart

Safety First

A 64-page manual of what it takes to satisfy OSHA — plus valuable chapters on accident prevention, first aid, firefighting. Illustrated. Check 2 on reader carder service at end of blue index pages.

Pipets for TLC

5-725-865

Spotting Pipet

For spotting samples on sheets in instant thin layer chromatography procedures and drug screening tests. Used with Gelman ITLC sheets. Pipet fills by capillary action; eliminates use of rubber bulbs or suction devices. Accuracy: $\pm 1\%$. 175mmL. Long enough to reach bottom of extraction tubes. Graduated in 3x10 μ l increments. Disposable.

5-725-865 Vial of 50/5.50
(Gelman 78069)

Streaking Pipet

Unusually shaped pipet with horizontal spiral capillary for spotting paper chromatograms. Minimize hydrostatic sample pressure. Permits uniform sample transfer. Spiral cap, 0.5ml. 15cmL. Shaft dia, 8mm. Borosilicate glass.

6-640 25.00

6-640

Chromovacs Spot Recovery Device

Consists of 6.4cmL glass tubing, plugged with glass wool. Both ends tapered. Attach rubber tubing to one end (connect tubing to filter pump). Other end picks up TLC spot . . . vacuum draws it into tube and traps it on glass wool. Remove glass wool and elute with solvent. Analyze TLC spot constituents with spectrophotometer or other analytical instruments. Inexpensive; disposable.

6-635 Box of 25/17.10

6-635

6-641

TLC Zone Recovery Pipet

Collects small samples from TLC plates. Consists of heavy-duty threaded tube, with sintered filter disc, connected to sturdy tip with polypropylene connector.

Connect vacuum source to top of pipet. Scrape TLC spot from plate with tip. Vacuum draws particles into tube . . . traps them on fritted disc. Disassemble pipet to remove disc. Centrifuge disc to remove sample. Also use for liquid sample recovery with 13mm membrane filter

All-PYREX® brand construction. With 3 interchangeable filter discs.
6-641 28.00

TLC Reagent Sprayers

Gelman Chromist. Aerosol propellant reservoirs to spray TLC plates with fine, even mist of reagent. Spray pattern equal to expensive nebulizers. Eliminates droplets, streaking. Propellant power equivalent to 5 standard 16oz (473ml) aerosol cans.

Analyst can use 5-718-51 reservoirs for all spot-visualizing reagents, including sulfuric acid charring spray. All reagents in 5-725-800 Drug Identification Kit (page 184) supplied in bottles to fit Chromist propellant cans. Valuable for cytology fixatives, preservatives.

Reagent is in contact only with glass, nylon, polypropylene. Will not contaminate reagents or separated materials.

5-718-50 Pk of 5/17.00
(Gelman 51901)

Chromist Reservoirs. 4oz (118ml) amber bottles threaded to fit Chromist propellant cans.

5-718-51 Pk of 5/4.35
(Gelman 78068)

5-718-50

Glass Atomizer. Ideal for spraying chromatograms with indicators. Uniformly fine spray. Borosilicate. $\frac{3}{4}$ joints. **FISHERbrand®.**

UV Lamp for TLC

11-987

Identifies substances when fluorescent indicator is used in adsorbents or when compounds fluoresce or can be rendered fluorescent. TLC plates, plastic sheets, or support media are placed on metal lab stand. Stand can be tilted or removed. Tubes switch on or off without waiting. Single rocker switch allows selection of short wave, 254nm, or long wave, 375nm. 110V 50/60Hz.

11-987 163.50
(Gelman 51438)

Replacement bulb for 11-987.

11-987-10 9.90

TLC Developing Chambers

5-718-18

For Glass TLC Plates

Hanging-plate developing tank. Enables user to suspend rack of chromatographic plates in tank until saturated by solvent vapor, then lower plates into solvent without disturbing equilibrium. Glass cover has retractable glass hooks passing through Teflon® sleeves to raise, lower rack. Anodized aluminum rack holds six 20x20cmx3.2mm thick glass plates or twelve 20x20cm thin pre-coated plates back to back. Stoppered hole in lid used to introduce solvent without disturbing vapor equilibrium. Chamber is 30Lx10Wx32cmH. Wt. 6.8kg (15 lb).

5-718-1895.50

Preparative multi-plate developing tank. Large enough to hold 40x20cm analytical or preparative plates. Rack holds twelve 40x20cm or twenty-four 20x20cm plates. Chamber is 43Lx24Wx34cmH. Wt 13.6kg (30 lb).

5-718-19350.00

Multi-plate developing tank. Similar to 5-718-18, but without rack suspension. Anodized aluminum rack holds six 20x20cmx3.2mm thick glass plates or twelve 20x20cm thin precoated plates back to back. Handle facilitates removal. Chamber is 30Lx9Wx25cmH. Wt 5.9kg (13 lb).

5-718-1759.50

Cylindrical developing tank. 6.4cm dia, 23cmH. Can be used to develop two 5x20cm glass plates simultaneously, or to store solvent systems. Borosilicate glass with flat bottom, ground top with plastic cap. Wt 0.45kg (1 lb).

5-718-1512.50

Rectangular developing tank. Is molded glass with ground top, flat glass lid. Developed plates can be photographed through clear, flat glass walls. Ridge on ends and bottom permits simultaneous development of two 20x20cm or four 5x20cm glass plates. Chamber 30Lx10Wx25cmH; wt 1.8kg (4 lb). Lid 30Lx10Wx0.5cmD; wt 5kg (11 lb).

5-718-1620.00

5-729-75

For All Types of TLC

Gelman chromatography chamber. Usable for ascending and descending chromatography, and for two-dimensional techniques with sheet or plate rotated 90°. Takes 20x20cm ITLC glass microfiber sheets or smaller strips, Chromagram sheets and strips, paper sheets or strips, conventional glass plates.

Used with 5-725-800 Gelman Drug Identification Set (page 184).

Chamber is light, unbreakable polypropylene, 4.5Lx29Wx29cmH, with folding metal legs, glass cover. Three solvent reservoirs and lining pads assure rapid vapor saturation.

Chromatography sheets or strips held by magnetic holders.

Package of 5-729-90 solvent pads, filling tube, manual included.

5-729-7548.00 (Gelman 51325)

Solvent saturation pads. Reusable pads, 14x22cm, fit in back of 5-729-75 chromatography chamber. Soaked with solvent to assure saturated atmosphere.

5-729-90Pk of 50/14.00 (Gelman 51334)

TLC Drying Racks and Desiccators

Protect media during storage and drying

5-718-35

10-Plate Rack

Use to carry and store TLC plates without damaging delicate media. Holds up to ten 20x20cm glass plates. Rack is 20-gauge stainless steel. 21Lx20Wx20cmH, with carrying handle. May be used with plates in either horizontal or vertical position. Wt 1.8kg (4 lb).

5-718-3542.00

5-718-36

15-Plate Rack

Room for up to fifteen 20x20cm plates in rack. Front locking gate prevents plates from slipping out when carried. Detachable handle to make room in oven or desiccator. Anodized aluminum, 21cm square x 20cmH with handle. Wt 2kg (4½ lb).

5-718-3672.50

5-718-30

Glass-Front Desiccator

Stainless-steel desiccating cabinet. Useful storage space for activated plates. Or for plates that have been developed and dried. Holds 5-718-35 and 5-718-36 racks. Removable desiccant tray; neoprene gaskets; glass-window door. Cabinet is 33Lx30Wx27cmH. Wt 3.6kg (8 lb).

5-718-30115.00

5-718-32

Desiccant Chamber Holds 24 Plates

Transparent plastic cabinet has slots for up to twenty-four 20x20cm TLC plates. Plates should be oven-dried before storing. Carrying handle; feet; door latch; desiccant tray. Cabinet is 24Lx25Wx24cmH. Wt 3.2kg (7 lb).

5-718-3295.00

Triple-Duty Cabinet

Desiccating cabinet also serves as drying rack and storage cabinet for up to fifteen 20x20cm plates. Entire cabinet can be placed in drying oven, with plates vertical or horizontal. With removable glass window-door; desiccant tray; pressure equalization outlet. Stainless-steel, 23Lx22Wx15cmH. Wt 1.8kg (4 lb).

5-718-31100.00

See page 174 for other chromatography drying and storage cabinets

Drug Identification Set

Identifies acidic, neutral, and basic drugs by TLC

Gelman Drug Identification Set gives hospitals, physicians, forensic laboratories the first commercially available system for accurate identification of drugs in urine. Thin layer chromatography procedure identifies acidic, neutral, and basic drugs by clinically tested methodology. Includes all drugs listed in Federal Register for methadone maintenance programs.

Set provides solvents, identifying or confirming sprays, and special Gelman ITLC sheets for 300 drug assays or 100 samples (acidic, basic, and confirming basic assay on each urine sample). Supplementary 5-725-850 Drug Standard Set and 5-725-851 Drug Control Set (see next page) provide standards and controls for 13 common drugs, without requiring permit or license from U.S. Drug Enforcement Agency (DEA). No longer necessary to use prescription drugs containing unknown, interfering binders.

Drugs are extracted from urine with special solvent by modified Davidow procedure; separated by TLC employing 5-729-75 Chromatography Chamber (page 183) and special Gelman "SAF"™ ITLC sheets (5-729-101A, page 186). Gelman medium gives rapid separation (20min), rapid drying (5min at 60°C), excellent resolution.

5-725-800

Ordering Information: Set includes 240ml 5-725-802 extraction buffer; 480ml 5-725-804 extraction solvent; 5-725-809 methanolic sulfuric acid; 480ml 5-725-806 acidic solvent; 480ml 5-725-808 basic solvent; 480ml 5-725-810 confirming basic solvent; 5ml methanolic sulfuric acid; 120ml each 5-725-812 silver acetate, 5-725-814 diphenylcarbazone, 5-725-816 potassium permanganate, 5-725-818 ninhydrin, 5-725-820 iodoplatinate; 25 Gelman 5-729-101A SAF ITLC sheets (20x20cm).

FISHERbrand® Disposable Pasteur Pipets (13-678-5A, page 959) — use to separate aqueous layer in initial extraction.

Fisher Boileezers® (B-365, page 277) — boiling chips prevent loss of sample during evaporation.

5.0µl Disposable Capillary Pipets (21-164, page 960) — for spotting samples, standards, and controls.

Fisher Versa-Bath™ adjustable water baths. Three sizes, 15-458 through 15-458-11, page 75, for evaporating extracted samples.

Fisher Isotemp® Forced-air Ovens (13-244-177 or 13-244-350, pages 855-856) or other drying ovens (see pages 854-865).

Chromato-Vue Ultraviolet Viewing Cabinets (5-719-590 and -600, page 174) — used for initial screening of basic drugs after separation.

Drug Overdose Emergency Kit

Results in 45 minutes by ITLC

5-725-866

Complete, disposable Seprachrom drug system including urine extraction supplies and micro ITLC chambers. For quickly detecting and identifying barbiturates, amphetamines, alkaloids, hypnotics, tranquilizers. Kit is sufficient for 20 three-assay urine tests.

Ordering Information: Includes 30 chambers, each with an ITLC sheet. Ready-to-use solvents. Complete spray reagent sequence in bottles to fit 5-718-50 Chromist™ spray unit. Twenty extraction tubes, buffer, boiling chips, 50 capillary pipets, instructions.

5-725-866.....82.00
(Gelman 51921)

Secure, dependable jaws that come attached to Castaloy® clamps. Hold everything from capillaries to 3½"-diameter cylinders. Safely, but gently. Our jaws open smoothly, all the way. No lockjaw. See them on pages 189 to 194.

Fisher Scientific Company

Two Drug Control Sets

Exempt from governmental licensing

Gelman Drug Sets supply precisely measured quantities of 13 common drugs for use as standards and controls in thin layer chromatography, gas-liquid chromatography, other techniques requiring pure drug standards. Exempted from permit and licensing requirements of U.S. Drug Enforcement Agency, so laboratories do not have to buy prescription drugs containing unknown fillers and binders that interfere with reproducibility and accuracy.

Ordering Information: Both sets contain 4 acidic drugs (phenobarbital, secobarbital, diphenylhydantoin/Dilatin®, and glutethimide/Doriden®), two groups of 9 basic drugs (propoxyphene/Darvon®, methadone, quinine, methamphetamine, cocaine, meperidine/Demerol®, codeine, morphine, and D-amphetamine).

Set No. 1

Drug Standard Set. Pure drugs supplied as 3.0mg/ml methanol solution, in serum vials with crimp seals.

Suitable for direct spotting on ITLC plates; for sampling in gas chromatography; for preparation of controls from drug-free urine; for any other procedure requiring pure drug standards. Vial contains 2ml of solution.

5-725-850.....Pk of 3/27.00

Pre-Coated Analytical TLC Plates

RediPlates™ . . .
Gelman . . .
Eastman

6-600

RediPlate™

Pre-coated TLC plates that have proved to be most efficient units you can use:

1. They're machine-coated on glass, which insures absolutely uniform thickness. It also means beautiful reproducibility from user to user, and from analysis to analysis.
2. They're carefully inspected to weed out bubbles and flaws.
3. Unique packaging with plastic spacers prevents flaking and marring during shipment and storage.
4. Silica Gel G coating contains calcium sulfate inorganic binder. This was chosen over organic binder to ensure faster separation and better resolution. Silica Gel GF plates contain zinc silicate phosphor with green fluorescence at 254nm. Use for all silica gel separations, with or without pre-treatment. Activate by heating to 100°C for 30 min.

Medium	Binder	Thickness	Size	Cat. No.	Box of 25
Silica Gel G	Calcium sulfate	250 μ m	20x20cm	6-600A	25.00
Silica Gel G	Calcium sulfate	250	5x20	6-600C	12.50
Silica Gel GF (fluorescent indicator)	Calcium sulfate	250	20x20	6-601A	25.00
Silica Gel GF	Calcium sulfate	250	5x20	6-601C	12.50

Gelman ITLC™ Sheets

Inert glass microfiber sheets impregnated with adsorbents. Uniform thickness and absence of organic binders assure rapid, reproducible separations with better resolution than paper and faster separations than other TLC media. SAF sheets have indicator giving bright green fluorescence at 254nm and 350nm.

Medium	Size	Cat. No.	Pk of

Silicic Acid SAF (fluor. ind.)	5x20	5-729-101B	50/23.00

Eastman Chromagram® Sheets

Flexible Mylar® poly-(ethylene terephthalate) base is inert, dimensionally stable. Standard 20x20cm (8x8") sheets with 200 μ m thickness. Cut with scissors to recover separated materials for scintillation counting.

Machine coating gives uniform, abrasion-resistant media. Silica gel and alumina media activated by heating at 100°C for 15-30min. Lead-manganese-activated calcium silicate indicator exhibits red fluorescence at 254nm. Is dark at 365nm, revealing fluorescent spots.

Cellulose, unactivated silica gel sheets suitable for partition TLC, and for reversed-phase partition when treated with Dow Corning 200 silicone oil. Cellulose sheets suitable for thin layer electrophoresis (see pages 288-289). Media may be pretreated for special procedures, made translucent by dipping in mineral of silicone oil.

Analtech Analytical Plates

Machine-coated glass plates give same superior resolution, reproducibility, speed as Redi/Plates (p 186), but offer additional media, sizes. Coating uniformity 250 μ m thick; no organic binder.

Silica gel and alumina "G" plates contain calcium sulfate inorganic binder; "GF" plates have zinc silicate phosphor with green fluorescence under 254nm light.

Special packaging protects coating from damage.

Castaloy® Clamps and Holders

Outlive iron or aluminum
by up to 500%

**Can't rust or
corrode**

**Non-slip
gripping
surfaces**

**Hold objects
small as 0.8mm,
large as 8.9cm**

Castaloy® . . . die cast from high-tensile-strength zinc alloy. Withstands clamping pressures 2 to 10 times greater than that which breaks other well-known clamps.

Tough material is backed up with tough construction details in all these clamps. Where strain is greatest (jaw housing and anvil), we've built in extra strength. Strong stainless-steel spring takes abuse of prolonged compression. Won't rust.

Copper-plated, then heavily nickel-plated. Clamps and holders present bright, corrosion-resistant surface unaffected by rust, corrosive fumes, salt, strong alkalis.

Clamp jaws are covered with heavy, non-skid vinyl coating bonded to metal for durability. Coating won't mar. Fiberglass insulating sleeves also available.

Clamping action of jaws is smooth and strong. Due to precision, spun rivet fastening. Won't collapse or crimp like swaged tubular fasteners in other clamps.

Jaws clamp 8.9cm cylinders or 0.81mm capillaries with equal firmness and delicacy. Pressure distributed over broad area reduces chance of breaking fragile pieces yet holds well. Machined threads on lock-in adjustment screws allow precise application of pressure. Clamps won't twist, slip, or come apart under load.

Packaged in clearly marked 12-clamp cartons. Eliminates tangle of clamps on stockroom shelves and drawers. Shipping case contains 6 cartons.

Castaloy® Extension Clamps

Two-Prong Clamp

Hold objects to 64mm diameter

5-731

Flat, vinyl, or fiberglass covered jaws of clamps hold beakers and flasks firmly at any angle, variable distance from support. One jaw is fixed, other opens against a stainless-steel compression spring. Opening is gradual to maximum angle, without binding. Non-corrosive, easy-to-clean, clamps are nickel-plated zinc with seamless brass extension tube, brass compressing screw, and pivot pin.

64	23	13	Fiberglass	5-734	4.75	4.30	4.05

Three-Prong Clamps

Hold irregular shapes at any angle

5-738

Three-prong extension clamps hold objects ranging from 0.80 to 89mm surely and safely. Two separate adjustment screws ensure even, precise pressure on glass. Minimize chance of breakage. Clamps are easily adjustable to vary holding angle, distance from stand. Choice of fiberglass sleeves for high heat or non-slip vinyl grip.

5-809

Support Clamp

Clamp supports electrolysis apparatus, glass rods, or tubing at any angle. Projecting arms are nickel-coated brass. Clamp is 152mm over-all, supports tubing up to 19mm dia easily.

9-490.....Ea/9.50
Lot of 12, ea/8.50

9-490

Electrode Support Clamp

Permits suspension of electrodes over beaker for potentiometric titrations. Holds 13-636-8 electrode clamp (see p 920) at desired level. Grips support rods to 18mm dia, resists corrosion.

13-640-282.....Ea/5.00
Lot of 12, ea/4.50

13-640-282

Stopcock Clamp, Yoke-Type

Fits over and fastens to 2mm bore stopcock shell. Compression screw with concave holder keeps stopcock plug in place while allowing you to move it when necessary. Compression screw is secured by locking nut. Clamp works easily on straight and oblique-bore stopcocks.

14-631.....Ea/7.00
Lot of 12, ea/6.30

14-631

Three-Prong Water Bath Clamp

Clamp attaches securely to wall of bath (3.2 to 7.9mm thick) with "C"-shaped holder. Holds objects to 2.54cm dia. Vinylized, 3-prong jaws prevent slipping. Won't rust or corrode. Over-all L, 9.8cm.

15-445-70.....Ea/5.25
Lot of 12, ea/4.75

15-445-70

Small Water Bath Clamp

Suspends thermometers (4.8 to 9.5mm dia) from "C"-shaped holder that clamps to bath walls up to 7.9mm thick. Clamp jaws tighten with wing nut, hold objects firmly. Over-all L, 8.3cm.

15-445-80.....Ea/4.00
Lot of 12, ea/3.60

15-445-80

Castaloy® Hosecocks

Jumbo Hosecock

Regulates flow from full-on to completely off. Easily compresses heaviest tubing to 9.5mm OD. Top compression bar moves up and down at simple turn of adjustment knob. Unit hinged on one side and opens with light finger pressure to allow positioning of tubing without removal from apparatus. 8.9L x3.8x7cmH. With two pre-drilled and countersunk holes for attaching to shelf, wall, or table with screws.

5-846Ea/9.00
Lot of 12, ea/8.10

5-846

Electro Hosecock

Use electric timer in conjunction with this hosecock for automatic control of flow sampling. Hosecock has electric solenoid which opens and closes clamping bar at signal from timer. Uses modified 5-846 Castaloy® hosecock mounted on electric apparatus. Top bar of hosecock is adjustable for setting normal flow, accommodates 9.5mm OD tubing. Unit hinged for simple tube positioning. 12Lx 5.4Wx15cmH. Mounting holes on bottom flange. For use on 115V 60Hz only.

5-846-5Ea/79.00
Lot of 12, ea/71.00

5-846-5

Hosecock Clamp

With fine-machined adjustment screw for very accurate regulation of flow in flexible tubing. Threaded keeper-screw can be raised and lowered, then turned into hosecock base for easy positioning of tubing. Accommodates tubing up to 9.5mm OD. Concave lower bearing surface, convex upper, reduces amount of pressure required for complete closure.

5-847Ea/2.75
Lot of 12, ea/2.50
Lot of 72, ea/2.35

5-847

Hosecock, Fixed-Position

A 5-847 Hosecock with Castaloy mounting bracket. Can be permanently installed for convenience on table, shelves, or gas apparatus case.

5-848Ea/2.75
Lot of 12, ea/2.50
Lot of 72, ea/2.35

5-848

Castaloy® Pinchcocks

Regular or Heavy Duty

Provides effective, complete closure. Won't cut tubing. Can't rust or corrode. Can be attached or removed without disconnecting tubing. Jaws of regular pinchcock, held together with compression spring, open when plunger is compressed to accommodate 6.4mm OD heavy wall tubing. Heavy duty model works well with stiff tubing commonly used in gas and water connections.

5-849

Type	Cat. No.	Ea	Lot of 12, Ea	Lot of 72, Ea

Fisher Model 181 Electrocolorimeter™

Monitors color in effluent and waste water

Recommended by the American Public Health Association for Method 204C in the 14th edition of *Standard Methods for the Examination of Water and Wastewater*.

Inexpensive system for ensuring that streams and industrial effluent meet APHA (American Public Health Association) color standards. Dual-beam photoelectric photometer specifically developed for ADMI (American Dye Manufacturer's Institute) method. Key to this new, inexpensive system: 3 Corning filters (red, green, blue) which approximate the 3 CIE (International Commission on Illumination) tri-stimulus values. Red filter peaks at 590nm; green, at 540nm; blue, at 438nm.

Three transmittance readings must be taken for each waste water sample, one with each tri-stimulus filter. All 3 tri-stimulus values can then be calculated for each sample.

Operation requires no special training. With each filter in turn, simply balance 2 photocell outputs with blanks. Set side control to 100% transmittance. Adjust standardize control until null meter indicates zero. Substitute colored water sample for one blank. (Sample is always compared to blank.) Adjust scale control to return meter to zero. (Null-balance potentiometer measures difference in output of cells. Only 1% difference produces 1 mm deflection.)

Read % transmittance directly from scale. (Output of sample photocell decreases in proportion to absorbance of sample.) Results reproducible to 0.5%.

Ordering Information: With tungsten lamp, 2 collimating lenses, infrared filter, selector wheel containing 3 tri-stimulus filters, mirror for splitting light beam, sample and reference cells, cuvet well adapter, two matched high-output silicon photocells, and frictionless taut-band meter with 18cm transmittance scale for optimum readability. Scale is mirrored to eliminate parallax. 27Lx30Wx13cmH. Power requirements, 35w. Shipping wt, 6.3kg (14 lb). With three 60ml absorption cells and instruction manual. For 115V 50/60Hz.

7-104895.00

For 230V 50/60Hz

7-104-1895.00

Fisher Electrophotometer™ II

Double-Beam Colorimeter . . . Reproducible to $\pm 0.5\%T$

Measures light absorbed or transmitted by colored solution, relative to reference solution. Absorbance readings are converted easily to concentration.

Light from tungsten source lamp is projected through appropriate filter to isolate wavelengths that will be absorbed by sample of interest. Select desired filter from a 6-place coded filter wheel that covers the visible spectrum completely. Filtered beam is split. One beam passes through sample to photocell. Other passes through reference solution to another photocell. Null-balance potentiometer measures difference in output of cells. (So sensitive that just 1% difference produces a 1 mm deflection.) Difference indicates light absorbed by sample . . . proportional to concentration. Results reproducible to $\pm 0.5\%$.

Sample is always compared to blank. No switching back and forth from blank to sample as with single-beam systems. No arbitrary scales. System eliminates errors.

For narrow bandpass filters or unusually dark samples, depress "High" button to operate tungsten lamp at full intensity. This increases sensitivity 25%.

Interchangeable plastic adapters automatically center absorption cells in sample and reference beams. Choice of 5 sample cells from 2mm for concentrated samples to 50mm for diluted samples.

Ordering Information: With frictionless taut-band meter. Not disturbed by jolting or vibration. Stable in spite of line voltage fluctuation and lamp aging. Simple electronic circuits. With red, green, blue filters; 7-103-5 Tungsten Lamp; four 7-102 absorption cells (23mm path length); two 7-103-24 cuvet well adapters; 14-754-10 test tube rack (see p 1141); instructions. For 115V 50/60Hz.

7-103595.00

For 230V 50/60Hz.

Absorption Cells for Electrophotometer™ II

Standard absorption cell supplied with instrument. 23ml capac; 23mm path length.

7-102Pk of 6/11.50

Rectangular absorption cell for pale colored samples. Fused seams. 60ml capac; 50mm path length.

7-102-4115.10

Round micro cell for small samples. Uniform diameter and wall thickness. 4ml capac; 10mm path length.

7-102-65Ea/2.00
Pk of 12/18.00

Square micro absorption cell for dark colored samples. Two sides clear, optically flat and parallel; two sides frosted. 9.97mm path length.

7-102-669.70

Micro cell insert reduces path length of 7-102-66 absorption cell to 2mm. Clear polished glass 7.97x9.97mm. For very dark liquids such as oil. Leaves 2mm path length through sample.

7-102-679.75

Round photometric cell for clinical tests. 5ml capac; 13mm path length.

2-675-163Pk of 12/12.00

7-102-41 with 7-103-26

Wide analytical range.
 Use a cell with 2mm path length for concentrated samples . . . a 50mm-cell for dilute solutions. You have a choice of five sizes.

Change tests in seconds.
 To use the Electrophotometer for a different analysis, simply turn to a different filter. The indexed wheel comes with red, green, and blue filters — has places for three more.

Readings in absorbance and %T.
 The dial reads directly in absorbance and % transmittance . . . no arbitrary scales. Readings are reproducible to $\pm 0.5\%T$.

Sensitivity increase.
 A pushbutton increases the intensity of the source lamp approximately 25% when you use a narrow-bandpass filter or have an unusually dark sample.

High sensitivity.
 Thanks to the double-beam design and sensitive photocells used in the Electrophotometer, a difference of only 1%T in the sample produces a 1-mm deflection on the null meter.

Easy to operate.
 You use a "STANDARDIZE" control to match two blanks at 100%T. Thereafter, you can read samples as fast as you can put them in the Electrophotometer and null the meter.

Filters for Use with Electrophotometer™ II

Fisher-Milligan Gas Washer

Effectively bubbles gas through liquid absorbent

The Fisher-Milligan Gas Washer consists of glass helix and glass tube fitted inside tapered bottle. Glass tube, supported by washers and threaded polystyrene retainer nut on underside of cap, conducts gas to bottom of absorption bottle. Gas escapes from bottle only by following spiral path of glass helix — a full 91cm for maximum absorption.

Leakage around lid is eliminated by special cap. Two-part assembly with chemical-resistant polystyrene top and threaded steel rim. Serrated inlet and outlet tubes molded with plastic top which fits into steel rim. Neoprene gasket recessed into underside of plastic. Tightening threaded rim pulls top down, compresses gasket, and seals top.

Ordering Information: 270ml. 21cmH. Bottle easily disassembled for cleaning. All parts replaceable. With bottle, glass helix, glass tube, gasket, washers, cap.

CO₂ Absorbents

Self-Indicating Ascarite®

A-183

Has 20-30% absorptive capacity, rapid, quantitative absorption in iron and steel carbon determinations. Also for carbon-hydrogen determinations in respiratory gas analysis, vapor phase chromatography, nitrogen dioxide absorption.

In use, color of Ascarite® gradually turns from brown to white because of sodium carbonate formation. This differentiates used portions and enables user to determine when bulb should be refilled. Can be used in any absorption bulb designed for use with solid absorbent. Supplied in 1 lb (454g) bottles.

Mesh	Cat. No.	Ea	Case of 12

Moisture Absorbents

Magnesium Perchlorate

Removes moisture in combustion trains. Anhydrous dehydrating agent absorbs up to 50% of its weight in H₂O.

M-54 1 lb(454g)/12.00
5 lb(2.3kg)/47.00

M-54

Activated Alumina

Absorbs 20% of its weight in H₂O. Recommended for use in purifying end of carbon combustion train, since it has partially selective absorption for CO₂. Well suited for use in desiccators. Can be reactivated and reused. 8-14 mesh. Developed by Research Laboratories of the Aluminum Company of America. Supplied in bottles.

A-541 1 lb(454g)/3.52
5 lb(2.3kg)/15.17
25 lb(11kg)/49.25

A-541

Indicating Activated Alumina

Changes color as it absorbs moisture. Turns pink when moist, indicating need for recharging or reactivation. When saturation is complete, alumina becomes white.

Ideal in towers for drying air, in desiccators, balances, and other closed appliances which should be kept free from moisture. 8-14 mesh. Supplied in bottles.

A-545 1 lb(454g)/4.67
5 lb(2.3kg)/30.35

See also: Calcium Chloride, In Chemical Index.

Drierite®

Absorbs 10-14% of its weight in H₂O when drying gases. No danger of shrinking or channeling. Stable, constant in volume, insoluble in organic liquids, non-poisonous, non-corrosive, repeatedly regenerative. Supplied in bottles.

Combax®

Accelerator Chips

Facilitate combustion. Pure iron, specially prepared by hydrogen reduction process to free it from carbon and sulfur. Result has extremely low (0.01%) carbon content. 50 mesh particles. In bottles with molded screw caps. Fisher. C-420..... 1 lb(454g)/8.65

C-420

Alundum®

For lining combustion boats. Prepared especially for carbon combustions. Treated to remove carbonaceous matter and surface alkali. Less than 0.0015% carbon content. 60 mesh most popular. Packed in resin screw cap bottles.

Air Compressors

For AA spectrophotometers

7-690

Twin Cylinder Compressor, 3/4hp

This air compressor consists of an oilless 3/4hp two-cylinder motor mounted on 38-liter horizontal air tank, built to meet ASME requirements. Free air delivery at 3.5kg/cm² is 85 liter/min.

When used with 7-690-5 dryer, 7-690-10 regulator, 7-690-15 pressure gauge, the compressor can be used with Jarrell-Ash Atomic Absorption units. See p 1059.

Ordering Information: Includes pressure switch set to cut in at 4.2kg/cm² and out at 5.3kg/cm². With pressure gauge, tank drain, safety valve, 4 mounting legs. For 115V 60Hz.

7-690437.00

7-688

Twin Cylinder Compressor, 1/3hp

Oilless, 1/3 hp twin cylinder motor mounted on 45-liter ballast air tank. 31 liter/min air flow at 7kg/cm² max operating pressure.

Combined with dryer, regulator, and pressure gauge, compressor can be used to operate Jarrell-Ash AA units.

Lap-joint Teflon® piston ring is backed by thin, stainless-steel seal. Force of band eliminates air leakage through lap joint openings

and insures good contact with cylinder wall. Both ring and sealing band automatically adjust to compensate for size changes caused by wear.

Ordering Information: Includes fully adjustable pressure switch, 2 filters, safety valve. 115V 60Hz.

7-688305.00

Compressed-Air Dryer

Dries compressed air produced by 7-688 or 7-690 air compressor. Used with air temperatures up to 32.2°C.

Wet air enters dryer and flows through chamber at 283 liter/min (based on 21°C inlet air temperature at 7kg/cm²). Droplets are separated out in chamber. Clean air moves through mesh screen into desiccant where dew point of air is lowered to -43°C. As desiccant is used, color changes from blue to pink. At pink stage, desiccant must be replaced. After air

flows through desiccant, it is released through outlet.

With 1kg silica gel, inlet and outlet connections with 1/4" pipe threads.

7-690-555.60

Regulator. Approx flow, 651 liter/min (at 7kg/cm², 0.35kg/cm² pressure differential). Pipe size, 1/4". With integral filter. For 7-690-5 dryer.

7-690-1011.00

Standard Pressure Gauge for 7-690-10 regulator.

7-690-152.60

7-690-5

7-704 with Removable Inner Tube and Jacket

For convenient handling. KIMAX® brand. Inner tube, held to jacket by 7-740-5 heat-resistant plastic nut and washer assembly, provides a watertight fit. Adapter of inner tube is tooled to fit No. 3 rubber stopper. Tube can also be used separately as an air condenser. 250mm size is suited for distillation of cut-back asphaltic products according to ASTM D402, ASA A37.45, and AASHO T78. (Kimble 18003)

Jacket L	Cat. No.	Pk of 4	Case of 12

Reflux Type Condenser

7-748 Yields Maximum Condensate Purity

Double-wall thimble-shaped borosilicate condenser sealed inside outer bulb. Side arms for water connection extend through outer bulb with 24/40 joint at top and 24/40 inner joint at bottom. Open end of condenser faces downward so that vapors passing into bulb are condensed on inside wall. External bulb of condenser measures 6.4dia x 11cmL. Over-all H, 24cm.

7-748.....35.65

Conductivity Meter

Reads resistance and conductivity directly

Model 31 Conductivity Bridge manually balanced AC bridge with brilliant "magic eye" tube as electrical balance (null) indicator. Used with appropriate conductivity cells, meter covers full range from demineralized water to strong acids. Especially useful tool for environmental labs measuring mine acids, mill waste, and detergents in water. Cell is immersed, dial turned until null appears. Unique multiplier scale then shows resistance of sample (0.2 ohms to 2.5 megohms) and conductance (0.2 μ mhos to 2.5

2.5 mhos) directly. Sensitivity control selects proper range. Operator can use 50/60Hz line frequency or 1000Hz oscillator for bridge current, depending on sample. Accuracy is $\pm 1\%$ between 2 ohms and 2 megohms (2 μ mhos to 2 mhos). Sensitivity is 0.33%.

Ordering Information: Rugged aluminum case. 28Lx23Wx15cmH; wt 4.3kg (9½lb). Solid-state circuits operate on 115V 50/60Hz. Without cells.
9-324-20440.00 (YSI 31)

9-324-20

Conductivity/Salinity Meter

Measures conductivity, salinity, and temperature

Model 33 Conductivity/Salinity Meter for water pollution measurements, especially in marine or estuary environments. Three-scale meter with selector switch reads specific conductance (0-500, 0-5000, 0-50,000 μ mho/cm), salinity (0-40 parts per thousand), temperature (-2° to 50°C). Salinity readings automatically compensated for temperature. Uses plastic probes (9-325-1 and 9-325-3) with long lead to make measurements at depths up to 15m. Conductivity readings accurate to better than $\pm 3\%$ at mid-scale, $\pm 2.5\%$ at full scale; salinity better than ± 0.9 parts per thousand above 4° , ± 1.1 below 4°C ; temperature better than $\pm 0.1^{\circ}$ at -2°C , $\pm 0.6^{\circ}$ at 45°C . Probe error less than $\pm 2\%$, $\pm 0.1^{\circ}\text{C}$. YSI 33 Meter is AC bridge like 9-340-20, but

with oscillator giving 100Hz frequency for 500 μ mho range, optional 600Hz for higher conductivity, salinity ranges.
Ordering Information: Solid-state circuits operate on 2 "D" size alkaline batteries, good for 200 hours operation.
9-325.....287.50 (YSI 33)

S-C-T Probes
Plastic conductivity cells with integral conductivity and temperature sensors, used with 9-325 YSI Model 33 Meter. Electrodes can be replatinized with 9-390 kit (see listing bottom of page) like standard conductivity cells. Two lead lengths.

9-325

Barnstead Conductivity Bridge

Digital readout

9-326

Monitors purity in water stills. Portable, battery-operated unit. Digital readout. Can be used with any conductivity cell without integral temperature compensation.

Operator calibrates meter against internal standard, uses multiplier dial and null meter to obtain approximate resistance or conductivity of sample, obtains exact null with three fine-adjustment knobs. Reading on digital scale multiplied by multiplier setting gives final value.

Multiplier has 6 conductivity settings (0.1μmho-0.1mho), 6 resistance settings (0.1ohm-10megohms) when used with cells having 1.0 cell constant. Changing cell constant extends range. Accuracy is ±0.1% in mid-range, ±3% at extremes.

Ordering Information: Meter is 24Lx13Wx9cmH; wt 2kg (4½lb). Supplied with 3 Mallory RM-233 batteries, but without conductivity cell. Use with 9-324-24, 9-324-26, 9-324-28, 9-324-30, 9-366, or 9-367 cells.

Cork Borers

Polished Hard Brass

To maintain cutting edge. Numbered brass handles are swaged and soldered to cutting tube. Won't come off. Numbers indicate size of borer. Borers nested for easy storage. With ramrod.

O.D. of Borers	Cat. No.	Set of
5 to 11mm	7-845B	6/ 7.00
5 to 15	7-845C	9/10.00
5 to 22	7-845E	15/18.50

Nickel Burnished Steel

Maintains cutting edge longer. Handles permanently threaded to cutting tube. 10 borers to a set. OD ranges from 4.75 to 19mm. Otherwise similar to 7-845 series. With ramrod

7-850-10Set/31.50

Boring Machine
For cork/rubber stoppers

Adjustable guide lets you bore hole in any part of stopper. Eight steel borers range in size from 4.8 to 16mm dia in 1.6mm increments. Composition base holds stopper firmly while boring, no turning. Set screw holds boring shaft for initial aligning. Hole bored with several turns of weighted wheel using integral handle. Machine can be fastened to table for stability. With punch for removing extracted part of cork from borer and attached rack for holding borers not in use. Constructed of enamel-coated steel with nickel-plated shaft, chuck, and punch.

7-855100.00

7-855

Replacement Borers
For 7-855 Machine

Set of 8 steel cork borers from 4.8 to 16mm dia in 1.6mm increments, as supplied with 7-855 Boring Machine. Sold only by the set.

7-860Set/48.00

7-860

23 Brass Borers
For 7-855 Machine

Set of 23 brass cork borers from 16 to 51mm dia, for use with 7-855 Boring Machine. With convenient holding rack. Sold only by the set.

7-862Set/190.00

7-862

Sharpener for Cork Borers

Sharpen cork borers as large as 22mm dia. Six mm more capacity than others commonly offered as substitutes. Has brass cone to fit borer. Sharpen with hard tool steel blade. FISHERbrand®.

7-865Ea/10.00
Case of 12/108.00

7-865

7-875

Cork Knife

Cut cork easily with tempered stainless-steel cork knife. Serrated 80mm blade reduces work, makes quicker, cleaner cuts. Rust-proof, with resilient plastic handle. FISHERbrand.

7-8751.80

Cork Press

Roll corks to desired taper without splitting. Accommodates corks up to 22mm.

7-88017.50

Standard Wiley Cutting Mill

Prepares materials for analysis with minimal moisture loss

Wiley Standard Model 4 Mill grinds animal hair, tree bark, dried blood, grain, paper, plastics, and seeds with minimal loss of moisture or volatile constituents. Shearing action of knives eliminates crushing and abrasion.

Sample is ground by four steel knives bolted to rotor working against 6 stationary knives bolted into frame. Ground sample passes through 1 of 3 interchangeable sieves into collection holder, either 1 pt (473ml) Mason jar or 1200ml steel beaker.

1/2hp ball-bearing continuous duty motor with thermal overload cutout. Rotor speed, 800rpm. Steel grinding chamber. 20 IDx7.6cmD. Steel hinged door with motor cut-off safety switch. Steel knives with inlaid edges. 550ml enameled exterior steel hopper with lid, 11 top IDx5.9 throat IDx11cmD. Stainless-steel sieves in 1/2, 1, and 2mm aperture sizes.

Ordering Information

Model 4 Wiley Mill. Over-all dimensions, 60Lx38Wx59cmH. With 3 sieves, jar and beaker delivery chutes, three 1 pt (473ml) Mason jars, beaker, wrenches, grease gun, 454g grease, 4 mounting lugs for bolting to bench or stand. For 115V 60Hz, 8.4 amp. Ship-

ping wt, 137kg (301 lb). Can be converted for 230V service.

8-336-10	1566.00

Fisher Mortar Grinder

Efficient reduction of powders, ore, refractories, and pigments

Fisher Model 155 Mortar Grinder automatically handles all but gummy, fibrous, or oily materials. Mount mortar on turntable and lock in place. Insert pestle in grinding head. Back-and-forth motion of pestle and rotation of mortar apply grinding pressure over entire bottom of mortar. To prevent sample from piling up on sides of mortar, fixed scraper blade continually directs sample toward mortar center. To adjust length of grinding stroke, move linkage pin on grinding head. To adjust grinding pressure, add or remove weights from grinding head.

Four scrapers are included: 1 alumina blade in special holder, 1 stainless-steel and 2 phenolic resin blades that fit second holder. Two 10 oz (283g) weights permit 3 grinding pressures. Additional weights, stored on shaft at back of grinder, can be loaded on spindle.

Timer dial sets grinder for runs to 50 min. "Hold" position allows continuous grinding. "Jog" position sets grinding head at any desired angle.

Hinged plastic cover with vinyl-sealed edges keeps laboratory dust from contaminating sample and contains dust from mortar. Contents clearly visible.

Lift off turntable and mortar to empty or clean. Autoclavable without demounting mortar. Pivoted head tips out of way when mortar is removed.

44Lx25Wx32cmH housing mounts flush with other apparatus or against wall. Bronze bearings need lubrication only once a year. Split pulley and belt mechanism drives head. 1/20hp motor.

Ordering Information: With cover and scraper kit with 4 scrapers and arm assembly. Without mortar and pestle. 204w. Shipping wt, 24kg (52 lb). CSA approved. 115V 50/60Hz.

Jar Mills

160 to 320rpm roller speed Single or multi-tier models

Space-saving portable roller mills grind algae, crystalline chemicals, coal, inks, paints, pigments, plant aggregates, rocks, soils. Place sample in jar with porcelain or steel balls or grinding medium. Mount jars on rubber rollers. Roller design keeps jars centered. Eliminates creepage. Static electricity generated by rolling jars eliminated by neoprene rubber construction.

Three-position adjustment on all rollers except bottom one on 2- and 3-tier models. Metal pans on multi-tier mills contain jar contents in case of breakage or spillage. Each roll, 33Lx5cm dia. Mills have welded construction, roller chain drives, sealed ball bearings. For 115V 60Hz. Without jars.

General Purpose Mill

Grinds 18kg/hr . . . handles fine or coarse materials

8-415

For fibrous materials such as seeds and roots or brittle substances such as ores. Unit consists of 1/3hp motor, grinding unit, base. Two types of plates available: 1 set for fine grinding is supplied; 1 set for coarse grinding can be ordered separately. Two types of feeds: tooth feed for dry materials is supplied; worm feed for wet or oily materials can be ordered separately. Both types of plates can be used with either feed. Grinding unit is high enough for placing receptacle under discharge opening.

Ordering Information

Mill. Grinding capac is 7 to 18kg/hr, from 75 to 100 mesh. 10cm dia plates. Over-all 58Lx21Wx33cmH. For 115V 60Hz. Shipping wt 44kg(97 lb).

Graduated Cylinders with Stoppers, Contd.

Cylinders with Enlarged Plastic (Protective) Tops

KIMAX® brand. With closed bottom linear high-density polyethylene stopper in $\frac{1}{8}$ ground neck. Mixing cylinder calibrated to contain. Meets Type I, Style II of Fed Spec NNN-C-940 requirements. 250ml used to determine unsaponified matter in soap (ASTM D460); also anhydrous salt-free soda soap and fatty matter in soaps containing synthetic detergents (ASTM D820). 500ml size used in settlement tests of emulsified asphalts (ASTM D244). Heights listed do not include

8-566-10

stoppers. Individual tolerances are same as those listed for 8-556 on page 231. (Kimble 20039-P)

Cytology Supplies, pp 611-613.

Special-Purpose Cylinders

Cylinder Serves as Distillation Receiver

FISHERbrand®. Used with 13-456 and 13-457 apparatus. (See page 883.) Calibrated to contain 100ml in 1ml divisions according to ASTM E133 and D850. 25cmH.

8-558Ea/4.50
Case of 12/48.60

8-558

Flat Bottom Cylinder Without Base

PYREX® brand. Ideal for samples stored in darkness for reaction and color development. Calibrated to contain. 10ml graduated in 0.2ml divisions with Accu-Red™ markings. ± 0.1 ml tolerance. With $\frac{1}{8}$ 13 stoppers. Case of 12 in convenient tube rack.

8-566-50Ea/5.50
Case of 12/59.40
(Corning 2972)

8-566-50

Soil Suspension Cylinders

KIMAX brand. Measure particle size distribution in soil suspensions. For ASTM D422 and AASHTO T88. While 1205ml cylinder is not specified in this method, it is useful for certain special cases. Calibrated to contain. Permanent white graduations fused into glass without etching. Round base (approx 107mm dia) fits into metal baths. 1000ml also used in pipet methods of mechanical analysis of soils. (Kimble 20023)

8-568-2

Capac	Grad. Lines	Tol	Approx. H.	Cat. No.	Pk of 1	Case of 4

Metal & Plastic Desiccators

Unbreakable Aluminum Desicooler® for Students

Fisher Desicooler® with spun aluminum body and lid cools quickly, won't rust or corrode. Lightweight and portable. Rim rolled into body surface holds supports.

Two supports provided. Two-hole support holds two 12 or 17ml wide form, or two 15 or 30ml tall form, or two 25 or 40ml Gooch crucibles. Three-hole support holds three 8ml wide form, or three 10ml high form, or three 13ml Gooch crucibles.

About 60 grams of activated alumina charges desiccator.

Ordering Information: With 2 supports.

8-592.....10.50

8-592

See also: **Activated Alumina**, p 206.

Airtight Aluminum Desiccator

Aluminum construction resists chipping, breakage, thermal shock; readily dissipates heat. Corrosion-resistant surface. Rolled bead around body supports shelves. 8-594A has 4-hole support with 13 and 29mm dia holes. Accommodates 12 or 17ml wide form, 15 or 30ml tall-form, or 25 or 40ml Gooch crucibles. 8-594B support has forty-five 7.9mm holes for combustion boats, etc. Both with handle and support. (Precision 68352 and 68356)

Heated Vacuum Unit

Doubles as portable oven. Ideal for moisture tests and sample testing at constant temperatures. Thermostatically controlled 200w electric heater maintains any temperature to 125°C with uniformity of ±1.5 at 37°C, ±2.0 at 125°C. By connecting vacuum pump or water aspirator to serrated outlet, up to 74cm of vacuum can be pulled. Unit will lose less than 5cm of vacuum per hour after removing vacuum source.

Enameled steel outside, aluminum inside. Shelf has forty-five 7.9mm holes.

Ordering Information: Dimensions: outside, 26dia x 33cmH; inside, 20dia x12cmH

8-594-10
above plate. With 9.6mm serrated connector, thermostat, pilot lamp, dial thermometer, bleeder and vacuum release valve, aluminum cover with plastic knob. 115V 50/60Hz, 200w.
8-594-10.....260.00 (Precision 68351)

Implosion-Proof Vacuum Desiccator

The chemical-resistant polypropylene lower section permits use of incandescent crucibles with conventional plates or porcelain stands. Upper section is unbreakable, transparent polycarbonate with slight amber tint. Molded groove in flange holds neoprene O-ring to seal 2 sections. Seal unaffected by low temperature.

Desiccator holds vacuum of 74cm of mercury for 24hr. With upper and lower sections. For plate, see 8-636.

Fisher Scientific Company

Desiccating Cabinets

8-644

Fiberglass Cabinet — Ideal for TLC

Desiccator cabinet from Labconco keeps contents corrosion-, moisture-, and contamination-free. Useful for chemical standards, Halide salt cells. Can be evacuated to 64cm mercury by water aspiration or vacuum pump.

Made of polyester resins reinforced with fiberglass. Clear tempered glass door allows content viewing. Nine molded

shelf supports permit flexible shelf arrangements. Reversible door adjustable for right or left opening.

Ordering Information:

33x37x37cm outside. Two shelves, 31x31cm with twelve 22mm holes in each.

With door, diaphragm valve, 2 shelves, desiccant pan, wire support stand. Light blue color.

8-644 260.00 (Labconco 55300)

Chromatography Plate Rack Can Be Used with 8-644 Cabinet

Holds up to 21 plates. Slides into 8-644 desiccator cabinet when shelves are removed. Plastic construction protects plates from scratching and corrosion.

8-644-8 56.00 (Labconco 55323)

Fisher Sparkleen™

Softens water Biodegradable Removes stains

All-purpose detergent for manual glassware washing was developed by Hall Laboratories with cooperation of Mellon Institute of Industrial Research in Pittsburgh.

Sparkleen™ quickly strips stubborn proteins, fats, oils, media, wax pencil marks, dried blood, and other organic-inorganic deposits from your glassware.

Contains Calgon™ which effectively locks up water-hardness minerals to prevent bacteria-harboring scum. Especially valuable in exacting titrations and

analyses. Excellent for presterilization cleaning. Also recommended as soak solution to loosen frozen glass joints, stopcocks, and stoppers.

Dialysis Contd.

Equilibrium-Type Dialysis Cells

Rigid, clear, acrylic plastic cells permit rapid dialysis of proteins or other large molecules from solutions. Two halves, one for solution; other for extraction medium. Held together by stainless-steel screws. Membrane sheet in center acts as gasket.

Separation speeded by shaking or rotating. Red dot on one half of cell easily identifies contents when rotating.

Size	Cat. No.	Ea
1ml	8-666-15	25.00

8-666-15

Dialysis Cell Membranes

For use with 8-666-15 through -18 series cells. Transparent, regenerated cellulose. Highly permeable to water and low molecular weight compounds. Retains materials with molecular weight of 12,000 and higher, such as bacteria and proteins.

8-666-19

Contains 10% moisture and 0.1% sulfur compounds. Average pore diameter is 4.8nm. Can be steam sterilized if reglycerinated.

10.2x15.2cm sheet size. May be cut to fit small cells. 100 sheets/plastic pack.

8-666-19Pk/19.00

Dialyzer Tubing

Seamless cellulose

Used in synthetic textile and food industries. Analytical chemistry, biology, pharmaceutical fields. Highly permeable to water and low molecular weight compounds. Retains materials with 12,000 and higher molecular weight.

Contains glycerin, water, 1% sulfur. 4.8nm pore dia. Must be reglycerinated if dried out by steam pressure sterilization. Wet tubing should be stored in water containing benzoic acid or formaldehyde. Store in airtight container or re-humidify before use.

Spectrapor™ Membrane Tubing

For dialysis and ultrafiltration

Pure, regenerated natural cellulose tubing. Has less electrical charge than any other dialysis membrane material.

Water permeability allows low molecular weight compounds in aqueous solutions to diffuse while retaining higher molecular weights such as proteins and bacteria. Ideal for molecular separation, protein binding studies, electrolyte removal, desalting.

Convenient dispenser box protects unused tubing. Accessory openers and closers simplify preparation. Molecular weight cutoffs listed are approximate.

Spectrapor™ 1 Membrane — 6000-8000 molecular weight cutoff.

Disposable Tissue Culture Dishes

8-772-5

Integrid® Dishes

For numbering and locating cell populations. 20mm grid etched in bottom. Style: 150x25mm. Surface area: 145cm². Ten dishes per plastic sleeve. Sterilized.

8-772-6Case of 100/49.78 (Falcon 3025)

2mm grid etched in bottom.

Style: 60x15mm.

8-772-5Case of 500/86.27 (Falcon 3030)

Four-Well Cluster Dish

Transparent polystyrene tissue culture dish for performing four tests simultaneously. Lid with breathing lugs facilitates free gas exchange. Wells with raised edges protect against cross-contamination and provide positive seal. Wells identified by Roman numerals. With physical orientation device for proper lid placement. Easy to stack. Wells, 35dia x 10mmD. Lid, 100mm square.

8-779Case of 200/90.09 (Falcon 3004)

8-779

8-772-7

24-Well Plate with Lid

Disposable 24-well plate (Multiwell™) for many qualitative and quantitative procedures, micro-plaque techniques, viral susceptibility tests, *in vitro* toxicity tests, cloning studies, virus isolation.

Wells treated to promote cell growth. Well volume, 2.2ml. Suggested working volume, 1 ml. 16.4dia x 10.7mmD.

Plate dimensions: 12.7Lx 0.6cmH. Growth area: 2.1cm². Lids with breathing lugs for free gas exchange. Break-off feet on base corners of plate protect bottom of wells from contamination. Individually wrapped. Store at 2° to 30°C.

8-772-7Case of 50/48.25 (Falcon 3008)

Petri Dishes

Corning. Optically clear. Surfaces treated for optimum cell attachment and growth. Easy to stack. Tested for sterility and cell growth. In tear-strip polyethylene sleeves.

One-hand opening and closing. No condensation on media. Distortion-free viewing.

FISHERbrand® Petri dishes are among the easiest dishes to handle with just one hand. Top and bottom edges are squared off (not rounded) to provide a firm, sure grip. The skirt of the lid is flared just enough so that the bottom can be covered quickly after streaking.

Because edges are squared, not rounded, the media is spread evenly over the entire bottom of the dish.

Three venting ribs built into the underside of the lid prevent build-up of condensation which would drip onto the media.

The flat lid of clear polystyrene provides a distortion-free view of cultures. Note the absence of a frosted marking area. Market studies indicate that many microbiologists prefer the totally unobstructed top. They use a grease pencil or felt-tip pen to mark dishes.

Extra-heavy polyethylene sleeves keep FISHERbrand dishes (20 per sleeve) sterile during transit, storage, and handling. Because they are not apt to tear, the sleeves can be saved and reused for other purposes.

Breakage is eliminated by a unique egg-crate shipping carton. Each sleeve is nestled in its own compartment to provide a cushion against the shocks of rough handling. It also helps maintain organization in the storeroom.

8-757-12

With Raised Ridge Around Top For Stable Stacking

The Stackable Dish. Select this catalog number for dishes that stack high and remain stacked, with a minimum of slipping, sliding,

and resulting scratches. 15Hx 100mm dia.

8-757-12Case of 500/33.00

Inoculating Turntables

8-758-10

Mini-Inoculating Turntable

For 100 or 150mm dishes; **hand-operated**. Place dish on turntable (it's covered with non-skid rubber). Spin table with hand. Move inoculating loop slowly from edge of dish to center. Produces nearly concentric circles of evenly distributed bacterial colonies from edge of dish to center. Decrease loop travel time or turntable rotation speed for concentrated colony growth . . . increase for dispersed growth.

Ordering Information: Low-profile cold-rolled steel structure. Only 32mmH so you can steady your forearm on work surface while plating. Baked acrylic gray enamel turntable with black enamel weighted base. With raised gripper lip and recessed center disc. Holds 150 or 100mm Petri dishes. Dia, 15cm. Wt, 2kg.

8-758-1045.50

8-758

Petri Dish Turntable

For 100mm dishes; **hand-operated**. Place dish on table. Set table in motion with hand. Move inoculating needle slowly from edge of dish to center. Holds standard 100mm Petri dishes. Enameled iron table with 11cm dia.

8-75841.50

8-758-50

Rota-Plate® Turntable

Motorized to speed plating and streaking
For 100 or 150mm dishes

Fisher Rota-Plate® Inoculating Turntable spreads colonies uniformly on agar surfaces which reduces chances of overgrowth and increases chances of colony selection. Consists of directly-coupled motor and turntable assembly.

Place agar-filled Petri dish on rotating plate. Raise lid on Petri dish. Turn switch on. Plate begins to rotate at 60rpm \pm 10%. Guide single inoculant loop radially across media surface from edge to center. Produces nearly concentric circles of evenly-distributed bacteria colonies. Colonies concentrated or dispersed simply by decreasing or increasing loop travel time.

Inoculation is easily accomplished once optimum pressure is developed between loop or other applicator and agar surface. Note: turntable rotation spreads colonies uniformly, reducing chance of overgrowth and increasing chance of colony selection. Greater number of single colonies develop toward center of dish.

Ordering Information: Housed in die-cast aluminum chassis. Raised gripper lip and recessed center disc allow use of both 150 and 100mm Petri dishes without interchanging equipment or using separate units. Non-skid rubber top surface, connector for remote control. 19Lx19Wx13cmH. Net wt, 2kg (4 $\frac{3}{4}$ lb).

For 115V 50/60Hz.

8-758-50109.00

For 230V 50/60Hz.

8-758-51120.50

Foot Switch. For remote control of 8-758-50 and 8-758-51 Rota-Plate.

8-758-5526.50

Fisher Introduces an Unprecedented Degree of Automation for Microbiology . . . The AutoMicrobic System™

Developed and built by
McDonnell Douglas Corporation

From the same people who helped land man on the moon comes a major breakthrough for the microbiology laboratory — the AutoMicrobic System. This remarkable new instrument takes up to 240 patient samples and **automatically identifies/groups and enumerates the organisms in just 4 to 13 hours.**

The AutoMicrobic System does the job automatically. It dilutes and incubates. Continuously reads each sample with an electro-optical scanning device each hour. Monitors growth patterns with its dedicated computer. And prints out re-

sults for the patient's permanent record or even billing.

If specimen growth pattern reaches the predetermined threshold, the test is positive. At this point, the technologist can initiate the AutoMicrobic System antimicrobial susceptibility test cycle to obtain data for guidance of antibiotic therapy.

Remarkable? Undeniably, yes. The AutoMicrobic System begins a new era in the microbiology laboratory.

For details on the AutoMicrobic System, see pp 614-615.

Educational Materials Catalog For Science Teachers

Biology

Our newest educational materials catalog for schools and colleges; there are over 300 pages devoted to biological materials alone. A sampling:

Perma-Slant™ bacteria cultures you can store for months at room temperature. Clear-View™ Embedments: aquatic and terrestrial organisms in their natural postures in crystal-clear mounts.

Drosophila cultures; guaranteed viable and prolific . . . delivered on the date you request. FISHERbrand® Prepared Microscope Slides for every major area in the life sciences.

Chemistry

Thousands of reagents and chemical specialties in purity grades to meet every educational laboratory need. Full lines of glassware, plasticware, and hardware. Balances, timers, colorimeters, spectrophotometers.

Earth Science

Rock and mineral specimens and display collections. Field equipment. Environmental test kits.

Physics

Accurate authoritative apparatus and supplies for physics labs and classrooms.

Audio Visual

Projectors, televisions, cameras, record players, and tape recorders.

Filmstrips, transparencies, slides, tapes, records, and Super 8mm film loops for general science, earth science, biology, chemistry, and physics subjects — and advanced disciplines.

For a free copy of our newest educational catalog, just check no. 6 on reader service card at end of blue index pages. Specify school or college edition.

Corning Mega-Pure Stills . . .

1.2 to 2.0 megohms/cm resistivity . . .
total solids: 0.18 to 3.0ppm

Pyrogen-free distilled water per USP XVII. PYREX® and Teflon® construction eliminates corrosion and metal contamination. Permits full visibility during operation. Allows easy cleaning.

Choice of three stills you can set up for single distillation of tap water or redistillation of previously distilled water. 1.4, 3.4, 11.4 liters/hr capacity. Low water safety switch on all models shuts off heaters if water falls below proper operating level. Aluminum cabinets. Wall-mounted or bench installation.

1. Condenser

The specially designed vertical condenser contributes to the purity of the water obtained from the MEGA-PURE 6. The vertically mounted condenser allows all volatile gases to escape through the vent before they have a chance to condense into the distillate.

2. Trap

The trap is designed to enhance water purity by preventing suspended solids and particulate matter from being carried over into the condenser. The operation of this component is designed specifically around the velocity and flow controls. Most of the impurities which are trapped by this component are returned and maintained in the boiler body, so frequent cleaning or flushing of the boiler body is desirable.

3. Push-Button Controls

Lighted push-button controls for ease of operation. The illuminated controls can be seen from a distance, so the mode of operation can easily be determined.

4. Removable Electrical Drawer

All electrical components are housed in this removable drawer. Should service ever become necessary, simply remove the drawer and replace it with an auxiliary drawer while the repair work is being done.

5. Collection Bottle

PYREX® brand collection bottle collects, stores, and dispenses up to 13 liters. Rear connection directs excess water to the drain to protect against overflow. Specially fitted cap minimizes particulate contamination.

6. Removable Front Cover (Not shown)

The removable front cover is another part of this completely modular system. It allows you to get at the parts easily should replacement become necessary. The four twist-lock screws can be turned with a dime.

7. Boiler Body

The PYREX® brand glass boiler body contains two vertically mounted VYCOR® brand glass heaters. You can see when the boiler needs cleaning. PYREX and VYCOR brand glasses are resistant to high temperatures and so resistant to chemicals that leaching is virtually eliminated.

8. High-Temperature Cutoff

Two factory-mounted temperature devices, located near each heating element, prevent overheating by shutting down the unit should the water level get too low.

9. Constant-Level Chamber

Preheated water from the condenser is fed into the constant-level chamber to insure maximum energy conservation. The basic function of the chamber is to maintain a proper volume of water in the boiler body.

10. Flowmeter Control

The flowmeter control is designed to allow you to achieve either maximum output or maximum purity from the MEGA-PURE water still. The flowmeter controls the volume of water which is fed into the condenser and/or boiler body.

**Automatic
Collection Bottle**
Ensures constant
distilled water supply

Attaches to 3 models of Corning stills Automatic 3.4 liter (9-085), 11.4 liter (9-069-100); 6 liter (9-089 p. 260) to collect and dispense water output.

9-080

1.4 Liters/Hour

MEGA-PURE™ 1-liter still is compact and easy to use. Produces distilled water with up to 1.2 megohms/cm resistivity and total solids as low as 0.57 mg/liter. Cooling water consumption is approx 11 liters/hr.

Enclosed in baked epoxy aluminum cabinet with 3-sided removable cover. Drain tubing and electrical cords in recessed channel on cabinet back. With high temperature cutoff, constant water level device, and illuminated push button controls.

Ordering Information: With or without polyethylene storage bottle which empties through front mounted spigot. 46Lx25W x86cmH. For 120V 50/60Hz, 1000w.

Still with 6-liter polyethylene storage bottle.

9-080405.00
(Corning 3510)

Still only without bottle.

9-081389.00

Six-liter polyethylene storage bottle.

9-08223.00
(Corning 413964)

Automatic Still Adapter Kit. For connecting 1975 or later models of 9-035-65 demineralizer to any Corning water still (see page 266).

9-09022.00
(Corning 440376)

When 45-liter bottle is filled, it shuts off water supply to distillation unit and power to still's boiler. As water in collection bottle falls below 35 liters, water supply and boiler power supply are turned on automatically. Gives you constant supply of water without overflow or cooling water waste.

Ordering Information: With glass connecting tube to join still and collecting bottle. 41Lx41Wx97cmH. For 120V 60Hz.

9-069-72425.00
(Corning 3515)

Wall mounting bracket. Mounts automatic collection bottle to wall.

9-069-7834.82
(Corning 400634)

9-085

3.4 Liters/Hour

MEGA-PURE 3-liter still is available in automatic or non-automatic models. Automatic model may be used with automatic collection system and Model LD-2a automatic demineralizer, or to process demineralized or previously distilled water further.

Produces water with up to 2.0 megohms/cm resistivity and total solids as low as 0.34 mg/liter. Cooling water consumption is approx 30 liters/hr.

Baked epoxy aluminum cabinet. Three-sided removable cover. Electrical cords and drain lines are recessed in cabinet.

Ordering Information: With high temperature cutoff, constant water level device, illuminated pushbutton controls, flowmeter for cooling water regulation. Automatic model has feed and cooling water shutoff. Without storage bottle. 58Lx30Wx114cmH. For 208 or 220V 50/60Hz, 2300w.

Automatic model.

9-0851015.00
(Corning 3512)

Non-automatic model.

9-086940.00
(Corning 3511)

13-liter storage bottle. PYREX® brand.

9-087105.00
(Corning 3502)

9-069-100

11.4 Liters/Hour

Model AG-11 is used alone or with LD-2a or LD-5a automatic demineralizer (9-035-65) and 45-liter automatic collection system (9-069-72). May be used for distillation of tap water or converted for redistillation of previously distilled or redistillation of previously distilled or demineralized water. Produces 11.4 liters/hour of water with 1.7 megohms/cm resistivity and total solids of 0.18 ppm. Consumes 98 liters/hr cooling water.

Ordering Information: With feed and cooling water automatic cutoff, high temperature cutoff, constant level device; without storage bottle. 65Lx48Wx116cmH. For 208 or 220V 50/60Hz, 8000w.

9-069-1001980.00
(Corning 3506)

45-liter PYREX brand storage bottle for 9-069-100.

9-069-102157.00
(Corning 410164)

For 9-035-65 automatic demineralizer, see p 266.

9-069-72

Flexible glass tubing adapter kit. Connects 9-069-72 collection bottle to Corning stills. Allows you to connect systems close together or far apart, depending on available wall space.

9-069-7620.19
(Corning 440138)

Corning Mega-Pure 6-Liter Still

9-089

Produces high-quality water with specific resistance of 1.7 to 2.0 megohms/cm and specific conductance of 0.59 to 0.50 microhms at 18°C. Cooling water consumption: 23 to 30 liters/hr.

For single distillation of tap water or redistillation of previously distilled water. Can be used either as component of automatic water system (automatic collection systems and/or demineralizers) or as single-distillation unit.

Pyrex® brand glass and Teflon® construction eliminates corrosion and metal combination. Full visibility during operation. Easy cleaning.

High temperature cut-off switch shuts off power if water falls below proper operating levels. Prevents overheating.

Ordering Information: Baked epoxy aluminum case. Three-sided removable cover. Wall or bench mounted. Electric cords and drain lines recessed in cabinet. 58Lx33Wx114cmH. With high-temperature cutoff, constant water-level device, and illuminated pushbutton controls. Without bottles. UL listed. 208 or 240V 50/60Hz

9-089.....1250.00
(Corning 3513)

Barnstead Stills 4- or 8-Liters/Hr Capacity

9-028-10

Barnstead compact glass stills produce 4 or 8 liters of pyrogen-free distillate per hour with total solids count of 0.2ppm. Operation and cleaning are completely automatic. POWER and DISTIL buttons fill boiler and activate heaters. Flowmeter controls volume of cooling water flowing through condenser. FLUSH button automatically drains evaporator for cleaning. After acid washing, FLUSH button backflushes water into evaporator, freeing it of deposits.

Constant level syphon maintains boiler water level. Automatic low-water cutoff shuts off power and water supply if water to boiler is interrupted. Water-level sensor mounts on any type of distillate reservoir and controls still operation. Shuts off power and condenser when reservoir is full. Starts up automatically upon demand.

Ordering Information: Borosilicate glass boiler, condenser, pressure-sensing device, constant-level syphon. Operates on bench, hung on wall, or mounted on accessory tank. With 1.8m water inlet tubing with in-line filter, 1.8m flexible PVC drain tubing, 0.9m Viton tubing for distillate connections

4-liters/hr glass still. 51Wx30Hx20cmD. For 220/240VAC 60Hz, 3000w, 15 amp. Shipping wt 8.2kg (18 lb).

(Barnstead A1054)

Barnstead Stills . . . Sizes 3.8-, 7.6-, and 19-Liter Capacities

For general purpose and hard water use. Produces distilled water with not more than 1.0ppm total solids, 5.4 to 7.2 pH and electrical resistance of not less than 300,000 ohms at 25°C. Stills use not more than 34 liters cooling and feed water combined for each gallon distilled water produced.

Stills consist of evaporator with its heat supply, condenser, constant

bleeder device to remove impurities, drain valve, and devices to control water level and salt concentration in evaporator.

All water-contacting surfaces are pure tin-coated. 19 liters/hr models have water level sight glass. Delivery tube (not supplied) connects distillate outlet to storage tank. For delivery tube, see 9-028-5A and 9-028-5B.

9-028C

Steam-Heated Models

Bayonet-type heaters inserted through side of evaporator. For connection to 2.5-4.2kg/cm² saturated steam supply. 7.6 liters/hr model has 3/8 IPS steam input and

return connections. 19 liters/hr model has 1/2 IPS input and 3/8 IPS return connections. Same water and waste IPS connections as electric models.

Barnstead Completely Automatic Stills

Fully automatic Distilled Water Centers produce pure water with up to 800,000 ohm/cm resistivity with less than 1ppm total dissolved solids. Ideal for biological and biochemical procedures that are sensitive to even minute traces of contamination.

Integral purity meter (on 19-liter models only) gives **direct reading of distillate purity in ohms** (resistivity) and **ppm** (total dissolved solids), with automatic temperature compensation. Tank has draw-off faucet and Ventgard® air filter which removes bacteria, alkali, organic vapors and acid gases — lasts up to 60 days before filter element replacement needed. Sight glass shows level of water in tank.

Stills start and stop automatically when low and high levels are reached in storage tank. Timed drain cycle empties evaporator every 4 hours to retard scale formation. Reliable low water cutoff protects heating elements from damage.

Ordering Information:

Three models offered. Each includes evaporator, constant bleed device, Q-baffle (insures pyrogen-free distillate), integral purity meters, and built-in storage tank.

Electric-powered, 7.6 liters/hr still. With 40-liter reservoir. 37Lx61Wx102cmH. For 115/230VAC 60Hz, 6000w.

9-028-413273.00

Portable Still

1.9 liters/hr capacity
Great for school labs

Electrically heated still produces 1.9 liters/hr distilled water — ample for student experiments and demonstrations. Set up in minutes by connecting flexible tubing to water supply and waste container. Requires about 15 liters/hr of water for cooling condenser and feeding evaporator. For delivery tube, see 9-028-5A on p 261. 25Lx53Wx48cmH. For 115/230VAC/DC.

9-047419.00
(Barnstead A1007)

Still with Plexiglas® Door

9-029-10

Important Safety Features . . . 1.65 liters/hr

Produces up to 1.65 liters/hour of water with 1.2 megohms/cm resistivity and total solids of 0.10 ppm pyrogen-free per USP XVIII. Cooling water consumption, 12 liters/hour.

Power and water shut off simultaneously when:

- (1) distillate receiver is full,
- (2) water pressure is low, and
- (3) excessive temperatures develop in boiler.

Also: no problems with power and water supply failures. If power supply fails, water shuts off. If water supply fails, power shuts off.

Water flows through solenoid valve to flowmeter which regulates volume of water input. Pre-heated water in boiler also monitored by constant level device.

Compact, portable cabinet with Plexiglas® door, rubber feet, and carrying handle. Only Wheaton "200" brand borosilicate glass and Tygon® tubing used.

Ordering Information: Removable boiler for easy cleaning. 45Lx18Wx24cmH. Without collection bottles. Uses any collection bottle with 38 to 57mm neck diameter. 110/120V 50/60Hz.

9-029-10495.00

Barnstead's Bantam Still

9-029A

1.8 liters/hr . . . Needs no permanent plumbing

Delivers 1.8 liters/hour distilled water with purity up to 2 megohms/cm depending upon feedwater quality. Plug into any outlet. Needs no permanent plumbing.

Tin-coated copper construction won't crack or shatter — keeps pure water pure. Atmospherically vented condenser gets rid of gaseous impurities before they can redissolve in distillate.

With low water cutoff that prevents heater burnout, lamp on cutoff box, pull-type drain valve. Combination bench or wall mount. Available in manual or automatic models.

Ordering Information:

Manual Model

Shipping wt, 8.2kg (18 lb). 115V. 12 amp.

9-029A340.00
(Barnstead A1602)

Automatic Model

Same as manual model but with collection system that starts and stops still automatically. Consists of 7-liter polyolefin storage bottle with level sensor, automatic cooling water shut-off. Designed for permanent installation. Shipping wt, 9.1kg (20 lb). 115V. 12amp.

9-029-1A495.00
(Barnstead A1604)

Electrically Heated Still

With pyrogen-free distillate

Cold water enters outer tube and is preheated and vented to dissipate gases before passing to boiling chamber. Triple vapor baffle prevents particles entrained in steam from entering condenser tube. Steam is condensed to pure distilled water by cold water entering system.

Borosilicate glass domes. Condenser tubes are tin-coated brass. Wall brackets for mounting. Feed water flow regulators. Descaler.

Electrically heated models. Replaceable immersion heaters deliver 100% of heat to water.

Water Purity Meter

With 3 resistivity ranges

Highly accurate purity meter features resistivity meter with dual compensation. One corrects for temperature effect of salt concentration. Other for temperature effect of dissociation of water itself. Applies to all 3 ranges. Eliminates differential errors in switching from one scale to another.

Meter has 3 expanded scale ranges: 0-.20, 0-2.0, and 0-20 megohms/cm. Meter accuracy is 2% of full scale max. Ranging error is 1% max between scales. Lamps show when purity drops below level indicated on dial.

Can be connected to 0-2V linear recording chart or other monitor. With removable bench mounting stand. For 115V 60Hz.

9-105410.00
(Barnstead 3402)

Threaded metal cell and thermistor. For 9-105 purity meter. 0.01 constant.

Air Filter

Protects purity of distilled water

Ventgard® air filter installed in vent of your storage tank, filters air entering tank to replace drawn-off water. Removes airborne bacteria, gases, organic vapors, alkali and acid gases. 100% efficient even with particles as small as $0.2\mu\text{m}$.

Feather-sensitive breather valves direct air through filter element as it enters tank. Filter element lasts 60 days or until 3785 liters have been drawn from tank.

With water seal that prevents air from entering storage tank through overflow, 1 filter element, tape for sealing tank cover, fittings.

Demineralizers for Corning Automatic Stills

9-035-65

3-liter or Ag-11, page 259

Automatic demineralizer for use with automatic 3-liter or AG-11 stills (see 9-069-100, p 259). Lets you select water purity from range of 50,000 to 1,000,000 ohms/cm resistivity. When minimum acceptable purity is reached, pilot light indicates cartridge should be changed. Demineralizer shuts off system's water and power.

Flowmeter monitors and regulates flow through system to prevent exceeding rated capacity of cartridge resins. To guard against contamination and eliminate constant monitoring of purity level, water solenoid accessory is available (9-035-80).

Ordering Information: 19 liters/hr capacity at line water pressure to 7kg/cm². With 6.4mm OD high pressure 49kg/cm² connector. Without cartridges. Vinyl-clad aluminum case. Wall or bench mounting. 21Lx20Wx62cmH. UL listed. For 120V 50/60Hz.

9-035-65350.00
(Corning 3509)

Water Solenoid Accessory Kit. For use with 9-035-65 demineralizer to shut off source water automatically when product water purity falls below preselected level.

9-035-8054.00
(Corning 440375)

Automatic Still Adapter Kit. For use with 9-035-65 demineralizer. Connects the electrical output jack of the demineralizer to the 9-069-100 water still.

9-09022.00
(Corning 440376)

Demineralizer for Corning Non-Automatic Stills

9-035-70

Mega Pure™ 3.4 liter and 1.4 liter/hr

Model LD-3 Demineralizer produces up to 19 liters/hr of high-purity demineralized water. Select water purity from 50,000 to 2,000,000 ohms/cm via 6-position control.

Platinum electrode with associated solid-state circuitry continuously monitors purity levels. Green light shows when water is at or above preselected purity level. Red light signals when water falls below purity level (need cartridge change).

Uses 9-035-68 or 9-035-78 cartridges. Cartridges are 30% larger than conventional types. Fewer changes required. Just twist knob to remove old cartridge.

With accessory flowmeter, you can connect LD-3 in front of still. Prevents boiler scale in still. Reduces cleaning problems.

Ordering Information: Epoxy-finished aluminum case. Wall or bench mounting. 15Lx18Wx62cmH. Without cartridges. UL listed. 120V 50/60Hz.

9-035-70222.00
(Corning 3507)

Flowmeter Accessory Kit. Connects demineralizer to Corning non-automatic stills.

(Corning 440092)

Disposable Cartridges

9-035-68

9-035-78

For 9-035-65 and 9-035-70 demineralizers

Ultra-high purity. Removes 1600 grains as NaCl and 1370 grains as CaCO_3 . For use where average purity greater than 2 megohm/cm resistivity and purity in excess of 18 megohm/cm is required. Ideal for repurifying previously treated water. 41Hx10cm dia.

9-035-7835.00
(Corning 3508A)

Ultra-high capacity. Removes 2810 grains as NaCl and 2400 grains as CaCO_3 . For use where average purity of 350,000 ohm/cm resistivity is required. Multi-layered cartridge ideally suited for demineralizing water before distillation in still and for general lab applications requiring ion-free demineralized water. 41Hx10cm dia.

9-035-6839.00
(Corning 3508B)

Barnstead's Bantam® Demineralizer

9-033-10

Connects directly with raw water line

Delivers 19-38 liters/hr for small labs. Delivers demineralized water in continuous flow at atmospheric pressure. Convenient disposable cartridges (see 9-034, 9-034-3, 9-034-5, 9-034-8, 9-034-10 on p 272) are easily replaced by turning a thumbscrew. Direct reading meter (range of 0-19 ppm as NaCl and 25,000 to infinity ohms resistance) indicates purity of high capacity and Ultra-pure cartridge effluent. Shows when to change cartridges.

Ordering Information: With 91cm plastic tube to connect to water line, inlet flow adjustment valve, drain valve, removable pedestal. Without cartridges. 20Lx20Wx71cmH. For 115V 50/60Hz. UL approved.

9-033-10158.00
(Barnstead D0800B)

Handy Versa-Table™ Units from the Contempra Collection of Furniture.

(See p 397 for full information.)

Barnstead's Bantam[®] Demineralizer

Connects to water under pressure

For demineralized water under 7kg/cm² pressure. Bantam holder removes raw impurities that scale and clog water-fed equipment. Also excellent for repurifying rinse and cooling water in circulating system. 19-114 liters/hr flow rate. Pressure chamber is PVC-lined; top faced with pure tin. With flange for wall mounting, inlet valve, 1/4" NPT inlet and outlet connections. Without cartridges. 20Lx18W x61cmH.
9-034-28135.00
(Barnstead D0807)

Pura-Lite accessory for 9-034-28 holder. Indicates condition of standard and mixed-bed cartridges when used in 9-034-28 pressure holder. Attaches directly to holder. Will remain lighted as long as cartridge effluent is above Pura-Lite endpoint. For 115V 50/60Hz. Available in 2 ranges:

Barnstead Cat. No.	Endpoint	Cat. No.	Ea
E3450	50,000 ohms	9-034-29	31.00
E3451	200,000	9-034-30	31.00

Dual-Cartridge Demineralizer

38 liters/hr capacity . . . Corning

Model LD-5A Automatic Demineralizer with purity selector provides pure water from 50,000 to 2,000,000 ohms/cm. Features dual cartridge system. One for organic removal. One for inorganics. Use independently or with any automatic Corning water still to further purify water. Demineralizer signals still when cartridge has expired and turns off still's water source and power. Built-in flowmeter monitors and regulates flow through unit. Prevents flow rate from exceeding rated capacity of cartridge. Allows accurate control of flow into connected still. With water solenoid accessory (see 9-035-80, p 266), demineralizer shuts off own water supply as purity falls below pre-selected level. Guards against water contamination and eliminates constant monitoring of purity level.

Ordering Information: Aluminum case, 18Lx15Wx62cmH. Wall or bench mounting. Uses 9-035-61, 9-035-68, and 9-035-78 cartridges. Supplied without cartridges and solenoid valve accessory. UL listed. 120V 50/60Hz.
9-035-75442.00
(Corning 3523)

Dual-Cartridge Demineralizer

Use alone or with Corning Still

Model LD-5 Water Purifier utilizes dual-cartridge system — one organic removal cartridge and one standard inorganic Corning cartridge. Unit removes taste, odor, color, fulvic, tannic and humic acids, free chlorine, and products of vegetable decay from water. Six-position selector lets you select minimum resistivity values up to 2 megohms/cm. Platinum electrode with solid-state circuitry continuously monitors purity levels. Green light shows when water is at or above pre-set purity level. Red light shows when water falls below this level, indicating need for cartridge change. Cartridges are 30% larger than conventional types — so fewer changes are required

Purifier prevents boiler scale and reduces cleaning problems when used in front of other Corning stills. To polish product water to even higher purity, use purifier after still.

Ordering Information: Baked-epoxy aluminum cabinet can be either bench- or wall-mounted. Without cartridges.
9-035-60335.00
(Corning 3522)
Organic Removal Cartridge. For use with 9-035-60 water purifier.
9-035-6138.00
(Corning 35080RC)

Disposable Demineralizer Cartridge

For raw water processing ... polishing ... repurifying

Hose nipple cartridges. Ideal for schools and small labs. All you need to buy is the cartridge. It's equipped with hose nipples on both ends for connection to ordinary laboratory tubing. Achieves flow rates up to 76 liters/hr.

Useful for raw water operation, for polishing or repurifying. Resins contain special dye that changes color when cartridge is exhausted, so cartridges can be used without meters. Two types available.

High Capacity (Standard) Blue Label

Multi-bed demineralizer in miniature with selected cation and anion resin beds. Economical because it delivers more gallons per cartridge than mixed-bed types. 1870 grains (as NaCl) total ion-exchange capacity.

9-035-20.....Case of 6/25.00
(Barnstead D8901)

Ultrapure (Mixed-Bed) Red Label

Produces high resistance demineralized water from tap water. Repurifies rinse water at work stations. Increases purity of water from central demineralizer. Total ion exchange capacity is 1200 grains (as NaCl), about 800 grains

to 1,000,000 ohms end-point. The pH is usually between 6.8 and 7.2 and water is largely free of silica and CO₂.

9-035-25.....Case of 6/28.00
(Barnstead D8902)

Economy Cartridge

Produces high-quality water with average specific resistance of 175,000 ohms/cm (about 3ppm). Total ion exchange capacity, 1230 grains expressed as NaCl or 1050 grains expressed as CaCO₃. End-point, 50,000 ohms/cm. Economical.

9-035-2818.00
(Barnstead D8950)

Combination Cartridge

Combines deionization and organic removal in one cartridge. When used in series or for polishing distilled water, removes ionized impurities to 10 megohms/cm or better. Total ion exchange capacity when used separately, 840 grains expressed as CaCO₃. About 2/3 of processed water volume is over 1 megohm/cm pure. Special absorbent removes chlorine additives commonly found in municipal water supplies. Economical for production of high quality reagent grade water (CAP specifications, Type II).

9-035-3022.00
(Barnstead D8922)

Wall Bracket for Hose Nipple Cartridges

Slotted front allows observation of resin color change in cartridge. Permits installation and removal of cartridges without tools. Molded plastic. With 2 screws.

9-035-508.00
(Barnstead D8900)

Scale Eliminator Cartridge

Use as pre-treatment for still feedwater. Prevents boiler scale in

still. Reduces cleaning problems.

Cartridge contains resin to deionize water and carbon to remove volatile chlorine additives. Produces water over 1 megohm/cm in purity. Capacity, 1500 grains expressed as CaCO₃. Pre-treats 570 liters of water with 2.6 grains/liter.

9-035-3222.00
(Barnstead D8921)

"Q" Cartridges

Polish distilled water up to 912 liters/hr Deionize raw water up to 228 liters/hr

Barnstead "Q" cartridges contain twice the deionizing capacity at 4 times the flow rate of smaller Barnstead cartridges. Useful in electronic and pharmaceutical industries where large volumes of pure water are needed for critical applications.

High capacity "Q" cartridge has total ion exchange capacity of 3200 grains expressed as CaCO₃ to end-point of 50,000 ohms/cm. Ultrapure cartridge removes 2100 grains. About 2/3 of processed water volume is 1 megohm/cm pure or better. Organic removal cartridge filters out organic matter and chlorine from about 11,400 liters of tap water.

Fit QPS holders or Millipore Super Q holders. Interchangeable with Millipore cartridges.

Complete Type I Reagent-Grade Water System

9-034-120

Barnstead 10 and 40 liters/hr models

Total reagent grade water system — from pre-treatment to point-of-use polishing. Provides instant supply of Type I water for critical applications. Plus it offers a storage tank of pure water for general laboratory use — all at an exceptionally low per liter cost.

ROpure reverse osmosis component removes 90-95% of raw water impurities via long lasting cellulose acetate membrane. Unique self-cleaning features extend membrane life on most water supplies. System recirculates pure water when reservoir is filled to save water and provide added membrane protection.

NANOpure filtration component feeds from 100-liter reservoir, produces 10-18 megohm water at 3 liters/min. Water instantly available without need for purity rinse-up. Expendables cost reduced by a factor of 10 over raw water fed systems.

Ordering Information:

Complete Type I Reagent Grade Water System consists of NANOpure deionization and submicron filtration system, recirculating/distribution pump, ROpure reverse osmosis system and matching 100-liter reservoir. Automatic control protects system pump from low water condition in reservoir. Also includes integral direct reading purity meter and two-year record keeping system that meets College of American Pathologists requirements.

Designed for wall mounting. Attractive Plexiglas® covers easily removed for service. Shipped completely assembled for trouble-free installation.

10-liter/hr System includes 10-liter/hr ROpure, 100-liter reservoir with pump protector, 3 module NANOpure system, recirculating/distribution pump. For 115VAC 60Hz.

NANOpure Type I Water Systems

9-034-100

Produce 3 liters/min of reagent grade water

System produces up to 3 liters/min of 10-18 megohm/cm water at lower per liter cost than comparable laboratory systems.

Disposable deionization cartridges remove 52g of ionized impurities each. Submicron filter removes particulates including bacteria. Large capacity cartridges are easy to install in screw-in canisters — require replacement far less often than other systems.

In-line purity meter measures electrical resistivity on a continuous scale to 18 megohm/cm. Provides purity verification at a glance and permits quantitative recording of output purity.

Disposable 0.2 micron filter is final purification step. Constructed of polymeric membrane in pleated configuration — offers 20 times more effective filter area than twin disc type. Also minimizes pressure drop to insure high flow rate.

Optional dual mode recirculating/distribution pump eliminates need for purity rinse-up. Pure water is instantly available from faucet. Also used to draw pre-treated water from storage tank. Features choice of continuous or timed recirculating modes.

For maximum system economy, pre-treated feed water is recommended. System may be connected to central deionization or distillation system.

Ordering Information

NANOpure consists of 2 deionization cartridge modules, submicron filtration module, outlet pressure gauge and in-line purity meter. When tap water is used as feed, 4 module system with organic removal cartridge is available — removes chlorine and organics from feed water. Record keeping system with 2-year supply of log pages is supplied for CAP (College of American Pathologists) inspection and accreditation requirements.

Compact, wall-mounted unit. Shipped completely assembled. For 115VAC 50Hz.

Design Your Own Pressure Cartridge System (PCS)

Can be assembled in many configurations. Dual cartridge holder can be expanded by installing additional single cartridge holders. Replace cartridges in seconds with screw-in

canisters. Holders accept an array of deionization and submicron filtration cartridges (on next page) — you can customize PCS to meet your exact requirements.

Dual PCS System

Economical two-stage unit. Expandable to multi-stage system by adding single PCS holders. Uses organic removal and deionization cartridges in series or two DI cartridges in series for maximum efficiency.

Ordering Information: Consists of 2 plastic screw-in canisters for easy cartridge replacement, direct reading purity meter and polyolefin faucet. Delivers pure water under pressure to maximum line pressure of 7kg/cm². 1/2" NPTF inlet connection. 15Lx30Wx71cmH. 1.8kg (4 lb). 115VAC 50Hz. Without cartridges.

9-034-44410.00
(Barnstead D0702).

Single PCS System

PCS expansion cartridge holder. Can also be used as economical single cartridge system. Connects to Dual PCS or other single holders with pins and inserts.

Ordering Information: 1/2" NPTF inlet and outlet connections. 18Wx71Hx18cmD. 3.2kg (7 lb). Without cartridge.

Separate Cartridges for PCS Systems

(1) High Capacity

For any operation demanding ion free water at minimum cost. Can remove 121g of salt as NaCl and 104g as CaCO_3 with end point of 50,000 ohms. Average resistance is 175,000 ohms or 3ppm. Max flow rate is 45 liter/hr with single cartridge. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

9-034.....Ea/23.00
Case of 6/117.00
(Barnstead D0803)

(2) Ultra Pure

For operations demanding 1,000,000 ohms/cm resistivity and neutral pH. Capacity is 80g as NaCl and 68g as CaCO_3 . About 2/3 of capacity is million ohms or better. The pH is usually between 6.8 and 7.2; water is largely free of silica and CO_2 . Max flow rate is 45 liter/hr for single cartridge. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

9-034-3Ea/25.00
Case of 6/127.50
(Barnstead D0809)

(3) Organic Removal

Removes organic or odor-causing impurities that would pass through demineralizer cartridge. Also for removing chlorine, for pre-treating demineralizer feedwater, and for high-purity rinse systems. One cartridge removes organic matter from about 5700 liter water. Max flow rate is 38 liter/hr. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

9-034-5Ea/19.00
(Barnstead D0813) Case of 6/95.10

(4) Oxygen Removal

For cooling water loops for maintaining low oxygen content to prevent corrosion. One cartridge removes 1ppm dissolved oxygen from 1500 liter water or 11 liters (15g) S.T.P. of oxygen.

For use with water having less than 10ppm total ionizable solids. Works best when fed demineralized water. Max flow rate is 38 liter/hr. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

9-034-8Ea/37.00
(Barnstead D0811) Case of 6/188.20

9-034

9-034-3

9-034-5

9-034-8

Distilling Apparatus (Complete Assemblies)

Produces Distilled Water of Medium Purity

Produces water with just 0.4 ppm and having a conductivity of 3.5×10^{-7} mho, at 25°C which is equal to water produced from an all-quartz still. Consists of borosilicate glass 5000ml flask fitted with $\frac{1}{4}$ 45/50 glass stopper; side outlet with $\frac{1}{4}$ connection to double vapor bulb ending in a ground sleeve; condenser tube with connection ground to fit the sleeve of the vapor bulb. Designed by Professor John H. Yoe, University of Virginia

9-107 125.00

9-107

Ammonia Determinations in Water

PYREX® brand. Consists of 500ml flask with $\frac{1}{4}$ 29/42 joint; condenser with $\frac{1}{4}$ 19/38 joint; inlet tube. Over-all H, 410mm.

9-128Ea/38.64
Case of 4/139.12
(Coming 3340)

9-128

(5) Cation

Special cartridge converts mineral salts to acids, resulting in effluent with low pH. For precious metal or radioactive isotope recovery, removal of volatile amines from steam condensate, close pH control with cartridge in ammonia or lithium form (available on special order). Total exchange capacity is 228g. Max flow rate is 45 liter/hr with single cartridge. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

9-034-10Ea/18.00
Case of 6/91.80

(Barnstead D0815)

(6) Submicron

Filters particles and living organisms when preparing water for making clear solutions or washing electronic and optical parts. Contains polymeric membrane that does not permit particles larger than pore size to pass. Pleated configuration of membrane produces

0.46m² filter area and results in low pressure drop across filter. Max flow rate is 230 liter/hr. Includes colloid removal load to extend life of filter. Not recommended for use in 9-033-10 Barnstead holder. Inert plastic casing.

Barnstead Cat. No.	Pressure Drop at		Pore Size	Cap Color	Cat. No.	Ea
	38 liters/hr	230 liters/hr				
D0750	.11kg/cm ²	.39kg/cm ²	0.22μm	aqua	9-034-70	103.00
D0751	.04	.21	0.45	white	9-034-71	103.00
D0752	.04	.18	1.2	orange	9-034-72	103.00

(7) Colloid Removal

Contains mixture of macro-reticular resins to remove colloids by absorption and ion exchange. Most effective in removing colloids not removed by demineralizer employing ion exchange alone or by charcoal filter employing absorption only. Barnstead recommends that cartridge be changed with every fifth change of mixed-bed cartridge. Max flow rate is 230 liter/hr. Pressure drop less than .07kg/cm² at 38 liter/hr when new. Inert plastic casing.

For art's sake

NEW, from Fisher, a **chemical template** to expedite the drawing of structural formulas of organic and inorganic compounds in reports and papers. Vastly simplifies tracing structures in perspective. This rugged plastic stencil, precision-cut, works beautifully with pencil, ballpoint, special drawing pens. Provides 27 different shapes. Plus protractor, handy millimeter rule. A lifetime tool for \$6.40. Complete with instructions. Order catalog no. **14-433-14**.

Distillation Head

9-153

Two-Part Distilling Head

PYREX® brand. Claisen head with a 9-153-10 West condenser with 500mm jacket and Claisen type connecting tube, both with F 24/40 joints. Side neck of tube has F 10/30 outer joint at top for thermometer.

Case of 8/80.32
(Kimble 22011)

9-147

For Barrett Water Test, Method B-2

PYREX brand. Barrett trap determines water content in petroleum or bituminous products. Receiver has 20ml capac. Graduated upward from stopcock to 3ml in 0.5ml divisions. With 2 ∇ 24/40 joints, provide connections for flasks and condensers.

9-150-5.....Pk of 2/57.46
Case of 4/103.44
(Corning 3622)

9-150-5

Dispense All

A never-say-die **dispenser** for virtually all liquids. Automatically delivers solvents, acids, alkalis, viscous fluids, media. In single shots or repetitively. With fully adjustable speeds (5-50 cycles/min). And 0.5% reproducibility.

Autoclavable dispenser offers choice of corrosion-resistant polypropylene-&-glass or chemically-inert fluoroplastic-&-glass valve assembly. Two glass dispensing tips included with each model. (Plus 1.2m Tygon tubing with polypropylene models.) For 115V models. To order, see table at right.

2 to 20ml volumes

Polypropylene-valve model	13-687-408	350.00
Fluoroplastic-valve model	13-687-409	450.00

0.5 to 5ml volumes

Polypropylene-valve model	13-687-410	350.00
Fluoroplastic-valve model	13-687-411	450.00

13-687-408

Distillation Column Packing

9-191-5

9-191-8A

For packed columns

Porcelain 6mm Berl saddles provide relatively high usable contact surface area, lower gas flow resistance, good internal distribution. Ideal for vacuum distillation, absorption, extraction. Boxes of 200cc hold approx 800 pieces.

9-191-5Box/12.00

Raschig rings double surface area

EXAX® brand. Approx wall thickness, 1mm. Ends are not fire-polished. Cut from standard flint glass tubing. (Kimble 39100)

Boiling Granules and Chips

Boileezers® promote gentle boiling

Inert non-volatile granules control bumping of low boiling point liquids, e.g. alcohols and acetone. Multiple points on granules increase the surface area on which bubbles can form. This promotes steady rise of bubbles to the surface in a gentle stream instead of in violent mass migration. Resist almost all chemical action with exception of concentrated sulfuric acid and strong alkalis. Can not contaminate distillate. 1/2 lb(227g) bottle.

B-365Ea'3.05
Case of 6/15.30

Carbon Chips eliminate bumping of aqueous and non-aqueous liquids

Treated micro-porous carbon chips can be used for atmospheric or vacuum operations. Chemically inert to all chemicals, including concentrated H₂SO₄ and strong alkalis. Enough chips for more than 1,000 boiling operations. 8 oz(227g) jar

9-191-12 4.95

Drum Dispensing Pump.

Dryers

Warm/Cool Air Dryer

Max temperature, 63°C

Consists of compact motor and blower-heater combination, mounted on handle-stand device. Two fingertip triggers control hot and cold air. Thermostat control. Max temperature at 25mm from outlet, 63°C. Output velocity, 2407 liters/min. Max wattage, 400w. 115V AC/DC.

9-201Ea/38.95
Case of 6/222.00

9-201

Forced Air Flow Dryers

9-201-10

Heater-blower gun for heating applications from 149° to 260°C. Move finger-switch in one direction turns on heater and blows hot air. Move switch in other direction deactivates heater and blower blows cool air. Adjustable louvered cover controls air intake. Max output volume, 980 liters/min. Draws 10 amp. With adjustable stand 115V 50 60Hz

9-201-10 56.00

From 260° to 399°C. Same as 9-201-10 but with higher wattage heater which produces warmer air. Draws 14 amp.

9-201-1358.50

From 399° to 538°C. Same as 9-201-10 but with higher wattage heater which produces warmer air. Draws 20 amp.

9-201-1575.00

Alderhalden Drying Apparatus

For Purifying Samples

9-202

PYREX® brand. Consists of 9-202-10 desiccant chamber, 9-202-5 heating chamber, 300mm condenser, and 250ml flask. All connected by two F 24/40 and one F 40/35 ground-glass joints.

Place sample in heating chamber and desiccating material in desiccant chamber. Boil suitable liquid in flask. Regulate pressure in heating chamber with F stopcock. Moisture in heated sample is absorbed by desiccant. Remaining vapors are then condensed in condenser.

Jacketed inner tube of heating chamber: 30 IDx150mmL. Complete unit H, 652mm.

9-202Ea/72.77
(Corning 3690) Case of 2/130.98

Heating Chamber. For 9-202.

Gas Drying Jar With Absorbent

Consists of plexiglass container filled with Drierite, a moisture-absorbing material. Useful for experiments requiring dry atmosphere. Dries 200 liters of gas per hour to dew point of -73°C .

Gas or air to be dried is fed into system through lower serrated nipple. Moisture is absorbed as gas moves through Drierite. Dry gas is expelled through top outlet.

As Drierite properties become exhausted, color changes from blue to pink. Drierite can be regenerated by heating in oven at 204°C for 1 hr. Color is restored to blue.

Jar made of 4mm thick acrylic plastic. 6.7dia x 29cmH. With approx 567g of Drierite. Can be used in pressure systems up to $6.3\text{kg}/\text{cm}^2$.

Want to remove oxygen from gas?

Use RIDOX (Cat. No. R 30)

Available from stock at your Fisher branch

Constant Voltage Transformers

Maintain 120V ± 1/2%

Maintain constant output voltage from line voltage input that fluctuates between 95 and 130V. Ensures maximum accuracy with electronic instrument. Operates best at rated watt capacity from 60Hz current. Contains average of 20%rms harmonic content. Recommended for electrical loads not affected by harmonics, such as solenoids, relays, filaments. With line cord connection kit. 60-500w sizes should be connected by cable directly to power supply.

Power Supply

Delivers adjustable DC

9-518-100

Delivers adjustable DC

From 0-8 or 0-16V when operated from 115V 50/60Hz input. Output rectified and filtered so voltage ripple is negligible. Max drain on DC output terminals is 120w continuous, 240w intermittent. Has meters to indicate amperage and voltage at output terminals and range selector switch. Metal case. 22Lx31Wx18cmH. For 115V 50/60Hz.

9-518-100145.70

Variable Transformers

Voltages from 0 to 280V

Plug in these transformers to 120 or 240V receptacle. You're assured of accurate, reliable voltage control between 0 and 280 volts, depending on model you choose. Best materials and workmanship protect against overload capacity and ensure long life.

In protective metal housing. With 2- or 3-conductor line cord, matching output receptacle, pilot light, and fuse.

*Equipped with 0-300V voltmeter, accurate to 3% of full scale readings.

Variable AC Power Supplies

Output of 0 to 120V or 0 to 140V

Voltage input of 120V 50/60Hz. Selector switch for output ranges of 0-120 or 0-140V, 10amp. Tamper-proof ventilated cases. Circuit breaker protects output from overload damage. Pilot lights. Grounded 3-wire cord and plug. Convenience outlet on front panel. Positive stops on all controls prevent internal damage. UL and CSA approved. Three models available.

Without voltmeter or ammeter. 15Lx30Wx16cmH. Shipping wt, 9kg(20 lb). 9-521-15597.40

With 0-150 voltmeter and dual range ammeter. Meters provide 2% accuracy. 15Lx38Wx25cmH. Shipping wt, 10kg(23 lb). 9-521-165196.80

With 0-150 voltmeter, dual range ammeter, wattmeter. Meters provide 2% accuracy. 15Lx38Wx25cmH. Shipping wt, 16kg(35 lb). 9-521-170289.30

Isolated AC/DC Power Supplies

Output of 0 to 140V

Ideal for industrial, medical, and educational applications where isolated output is required for safety. Output can be grounded independently of supply line. Operates from 120V input. Output of 0 to 140V AC or DC. In tamper-proof ventilated case. Positive stops on all controls to prevent internal damage. Convenient outlets. DC output from banana jack on front panel. With circuit

breakers, 0 to 150V voltmeter, pilot lights, and grounded 3-wire cord and plug. UL and CSA approved.

Alarm Devices

Monitor power and temperature for 120VAC appliances

Sound/Off™ Power Monitor emits loud piercing signal when electricity passing through appliance or equipment drops below 89V, fails completely, or plug disconnects. Alarm sounds for minimum of 72 hr. When power is restored, alarm automatically shuts off. Use with refrigerators, freezers, incubators, recorders, computers, cryostats, tissue processors. Also serves as anti-theft alarm. Easy to install. Simply insert appliance plug through proper spaces in monitor. Then attach monitor to any standard 2- or 3-pin plug/outlet.

Ordering Information
Power Monitor. Compact. 12Lx6.3W x3.8cmH. Flame retardant polypropylene housing. Solid-state circuitry with battery conservation circuit. Operates on 9V battery — only when alarm signals. Battery automatically recharges when power resumes. With batteries.
9-525-527.50
Monitor with temperature monitor. Same as 9-525-5 power monitor but also with thermostatic device factory set for monitoring temperatures between -54°C to 75°C. Thermostat is placed inside appliance. When temperature exceeds set limits or power is interrupted for any reason, alarm is sounded.
9-525-630.00

9-525-5

Ground Monitor

9-525

Checks circuit and ground

Provides accurate indication of presence of ground and AC polarity at a glance. No need for inconvenient probes and meters. Simply plug into power outlet of circuit to be monitored. "O" and "K" light up if circuit is wired properly and grounded. "O" lights up if ground (green wire) is open; "K" if neutral (white wire) is open. If polarity of power (black wire) and neutral wires are reversed, "O" and "X" light up. Molded plastic construction. UL listed.
9-5256.75

Grounding Adapter

9-525-10

Connects 3-wire connectors to 2-wire receptacles

Grounding type adapter with parallel, polarized blades and slots. U-shaped grounding slot, hook type terminal for ground connection.
9-525-10Pk of 10/4.40

See also: **Electrical Outlets**, p 428.

Vacuum Tube Voltmeter

9-509-10

Measures low power and conventional ohms over 28 ranges

Model 312 has 40% less circuit loading than most conventional vacuum tube voltmeters. Ideal for testing solid-state circuitry with 0.5VDC range.

DC voltage ranges of 0-0.5, 0-1.5, 0-5, 0-15, 0-50, 0-500, 0-1500. AC voltage ranges of 0-1.5, 0-5, 0-15, 0-50, 0-150, 0-500, 0-1500rms; 0-4, 0-14, 0-40, 0-140, 0-400, 0-1400, 0-4000V peak to peak. Input impedance, 16 megohm for DC and 1 megohm for AC. Accuracy of $\pm 3\%$ of full scale DC and AC.

Resistance ranges are Rx1, Rx10, Rx100, Rx1k, Rx10k, Rx100k, Rx1 megohm. 10 ohms on Rx1 center scale indication. 1k ohms on Rx1 max indication. Accuracy of $\pm 3^\circ$ of arc. Max test current on low power is 5mA on Rx1; 165mA on Rx1 on conventional power.

Ordering Information: Antiparallax 18cm mirror scale. Taut band movement never develops error-causing friction. Dual range probe (X1 range for normal voltage readings of all functions on all range; X10 range multiplies voltage ranges by 10). With manual. 12Lx17Wx20cmH. 105/125V 50/60Hz.

9-509-10132.00

28-Range Volt-Ohm-Milliammeter

9-522-22

With decibel scale

Versatile V-O-M with DC voltage ranges of 0-0.3, 0-1, 0-3, 0-10, 0-30, 0-100, 0-300, 0-1000 ($\pm 2\%$ accuracy) and AC voltage ranges of 0-3, 0-10, 0-30, 0-100, 0-300, 0-1000 ($\pm 3\%$ accuracy). Ohms ranges of 0-1k, 0-10k, 0-100k, 0-1 megohms, 0-10 megohms. DC milliammeter ranges of 0-0.1, 0-10, 0-100, 0-1000. Instrument also incorporates a scale to indicate sound levels from an amplifier with speaker. Selectable decibel ranges of -20 to +12, -10 to +22, 0 to +32, +10 to +42, +20 to +52dB.

Ordering Information: In rugged black high-impact thermoplastic case with 2 input jacks. Virtually indestructible even when dropped from 152cm heights. Diodes and three-fuse arrangement protect meter from burnouts. Internal electrical tester system prevents explosive arcs in high energy circuits up to 2amp/1000V fuse capacity. Single range selector switch reduces chances of incorrect settings. No metal parts. Completely insulated for maximum protection against electrical shock. With safety test leads, insulated alligator clips, batteries, spare fuses, and instruction manual. Approved by U.S. Bureau of Mines.

9-522-2296.00

Pocket-Size V-O-M

9-522-10

With 18 ranges

Complete volt-ohm-milliammeter has standard sensitivity of 20,000 ohms/VDC and 5000 ohms/VAC. $\pm 3\%$ accuracy on all DC ranges; $\pm 4\%$ on AC ranges. Test probe can be removed and inserted into top of meter, making it common probe. AC/DC voltage ranges 0-3, 0-12, 0-60, 0-300, 0-1200V. Ohms ranges are 0-20k, 0-200k, 0-2 megohms, 0-20 megohms. DC μ A, 0-600 at 250mV; DC mA, 0-6, 0-60, 0-600 at 250mV.

SepraTek™ Clinical Micro Electrophoresis System

9-528-20

Complete SepraTek System 9-528-20

Gelman system makes clinical electrophoresis easy for large or small laboratories. Used routinely by clinical labs to separate and quantitate proteins, hemoglobins, enzymes, other materials that do not require long migration for good resolution.

Separation is made across 5.6cm width of Sepraphore cellulose polyacetate membrane, so 8 sam-

ples and controls can be separated simultaneously on 12.5cm strip. Good separations obtained with single drop of blood or serum. Up to 6 SepraTek chambers with 48 samples can be operated at same time on same 9-528-111 or 9-528-200 Power Supply unit. (See p 295.)

With unique Multi-Applicator, all 8 samples are applied in less than 2

minutes . . . 48 samples in less time than normally required to load one conventional chamber. Clinically proven procedure is easily performed by technologists. Saving of time and materials increases as work load grows.

Ordering Information: Complete microelectrophoresis system, except power supply, at price substantially less

SepraTek Great for Sickle Cell Screening

For rapid, reliable screening of blood to confirm sickle cell trait, detect other hemoglobin pathologies.

Method takes only one drop of blood, or packed, washed cells. Up to 8 samples, or samples and hemoglobin controls, can be separated in 15 minutes . . . 48 specimens by using 6 SepraTek chambers with same power supply. Materials, reagents cost about 12 cents per test.

Blood is lysed with 9-528-190 Hemolysate reagent to release hemoglobin. Sepraphore III membrane is soaked in 9-528-196 Hemoglobin Buffer. Controls and samples are electrophoresed for 30 minutes at 425 volts (40 minutes if larger Gelman electrophoresis chambers are used).

Stain separated hemoglobins with 9-528-159 Ponceau S. Rinse with 5% acetic acid. Clear membranes with 9-528-160 SepraClear. See p 298 for reagents.

than cost of separate components.

Kit includes 9-528-24 SepraTek Chamber; 9-528-22 Applicator; pk of 9-528-32 Sepraphore strips; pk of 9-528-30 Absorbent Pads; pk of 9-528-36 Glass Slides; 12 vials of 9-528-152 High-Resolution Buffer; pk of 9-528-156 Ponceau S protein stain capsules; 9-528-34 Clinical Electrophoresis Manual.

Eberbach Electroanalyzer

Analyzes metals by electro-deposition process

Electro-deposition is most fundamental way to determine such metals as nickel, copper, lead, antimony, cadmium, and zinc, with oxidation potentials more negative than manganese. Especially useful for analysis of alloys, since several metals can be determined in succession in same solution.

Metal ions are plated out on weighed platinum cathode, which is washed, dried, reweighed to determine amount deposited. Analyst can recover high percentage of one metal, change potential and deposit second metal.

Eberbach Electroanalyzer has built-in rectifier supplying DC potentials up to 7.5V, currents to 10amp, at two independent deposition stations. Each station has separate ammeter and center-

zero (10-0-10) voltmeter with polarity reversing switch. Each has adjustable rubber-cushioned beaker platform, glass stirrer driven at 620rpm by split-phase induction motor and V-belt. Hollow stainless-steel spindles have rotating DC contacts for stirring anodes. Electrode positions are adjustable.

Ordering Information: Steel case with baked enamel finish has 18-8 stainless-steel front to resist acid

fumes from samples. Case is 43Lx39Wx75cmH, with flat sides for side-by-side set-up, wall-mount bracket. Shipped for use on 115V 50/60Hz (4amp); change of wires adapts for 230V 50/60Hz (2amp). With two glass stirrers, manual of analytical procedures, but without electrodes.

9-528-22

SepraTek Multi-Applicator 9-528-22

Enables technologist to load electrophoresis chamber in fourth of usual time. Insures reproducible sample application.

Molded acrylic base contains 8 wells for samples and controls. Clear shield has numbered "keys" which take and dispense samples. Cover contains cleaning tank.

When applicator button is pressed, keys take uniform volumes of samples from wells. Loaded applicator is placed on cover of SepraTek chamber and button pressed again, transferring serum samples to Sepraphore strip. Keys are independently suspended, so they exert uniform pressure on membrane, dispense reproducible samples.

Ordering Information: Assembled applicator is 10.3cm² x 5.6cmH.

9-528-22115.00

Clinical Electrophoresis Manual

Loose-leaf manual written by group of experts emphasizes importance and versatility of electrophoresis as diagnostic procedure. Illustrations show patterns characteristic of genetic abnormalities, diseases. Covers normal and abnormal serum protein patterns; diagnosis of dysproteinemias; lipoproteins, and glycoproteins; LDH isoenzymes; other techniques.

Supplied with 9-528-20 Kits
9-528-3415.00
(Gelman 62095)

Gelman Semi-Micro Electrophoresis System

For macro and micro procedures

Dual-purpose cellulose polyacetate electrophoresis system performs micro-size separations (like SepraTek™, Microzone, and Helena systems) as well as macro-size sep-

arations on standard 2.5x17cm strips. Key components of the system are 9-527 semi-micro chamber and 9-527-2 semi-micro applicator (see descriptions below).

9-527

9-527-2

Semi-Micro Electrophoresis Chamber

Accommodates one to nine 2.5x17cm Sepraphore III membranes (9-528-42) for up to 18 separations per run. Or handles one to four 5.7x17cm Sepraphore III membranes (9-527-10) for up to 32 separations per run.

Removable polystyrene bridge holds membranes in place with magnetic connectors. Bridge design permits application of specimens on membrane either inside or outside of chamber. With built-in ice tray for cooling during electrophoresis or immunoelectrophoresis.

Transparent acrylic cover enables user to see membranes clearly during processing. Dome-shaped to prevent moisture drip. Safety interlocks automatically cut off current when cover is lifted.

Chamber can be used with 9-528-111 or 9-528-200 power supplies (see page 296). Chamber connector plugs for connecting power supplies permit use of additional chambers.

Ordering Information: High-impact polystyrene unit with full-length platinum electrodes. 30Lx23cmW. With 9-527-8 glass plate and 9-527-4 applicator guide.

9-527 135.00
(Gelman 51212)

Semi-Micro Applicator

Push-button applicator picks up and efficiently applies four 1.5 lambda specimens to membrane strips in 9-527 electrophoresis chamber. Can also be used with 9-528-24 SepraTek Chamber (see page 285).

When applicator button is pressed, four keys take uniform volumes of sample from loading tray wells. Loaded applicator is placed on cover of electrophoresis chamber and button pressed again, transferring serum samples to membrane strip in 1.5x10mm pattern. Keys are suspended to assure optimum contact with membrane and uniform pressure.

Ordering Information: Three-piece molded acrylic unit with specimen loading tray, protective cover, and four stainless-steel keys. 10Lx10Wx5.6cmH.

9-527-2 115.00
(Gelman 51167).

Replacement Parts

Semi-Micro Applicator Guide

(Gelman 38605)

Buchler Polyanalyst™ For Gel Electrophoresis

Polymerized acrylamide gels give exceptionally high resolution (20 to 30 components in human serum) when used as electrophoresis medium. Separation time and resolution for different materials can be controlled by varying gel composition.

Compact apparatus for both electrophoresis and destaining. Consists of upper and lower buffer chambers with platinum electrodes integrally mounted in upper chamber. Each chamber has 500ml buffer capacity.

Electrophoresis is performed in glass tubes, 8mm OD and up to 250mmL. Tubes longer than 125mm require a special lower buffer chamber. (For destaining, gel columns are simply transferred to tube with larger ID and slightly constricted ends.)

Each tube holds 0.005 to 0.2mg of sample. Tubes are held in numbered positions in holder assembly that forms floor of upper buffer chamber. Top ends of tubes are in direct contact with buffer in upper chamber; bottom ends with buffer in lower chamber. Equal spacing of tubes and use of circular electrodes assure uniform current through all gel columns. Leveling screws and spirit level in cover assure tubes are held in vertical alignment.

Lower buffer chamber is water-jacketed, so temperature can be regulated when separating heat-sensitive materials such as enzymes and proteins. Also minimizes drying, diffusion currents, and other effects that cause unreproducible results.

Circular flat acrylic plastic cover has spirit level and electrical interlocking safety device. Eliminates exposure to unshielded electrical contacts. Cover cannot be removed without breaking electrical circuits.

Stained gels are transferred to 9-531-5 destaining tubes, returned to Polyanalyst, and electrophoresed with reverse polarity so excess stain is removed. Only sample components remain stained. Stained components can then be cut out, dye eluted for colorimetric determination of components. Or entire tube can be scanned in densitometer.

Vertical Starch Gel Electrophoresis Apparatus

More convenient, more efficient than paper

9-531-100 A

Buchler vertical electrophoresis apparatus resolves sample into more zones than paper electrophoresis without overlapping components. Handles such difficult separations as human serum proteins, tissue enzymes, and differentiating hemoglobins . . . often impossible with paper.

Direct sample insertion is an added convenience . . . no paper or starch granules needed. Unique vertical design allows direct insertion of liquid sample without sacrifice of resolution or reproducibility. Removable comb-bearing slot formers, fixes depth of slots in molten gel. Provides uniform cross-section for electrophoretic migration — resulting runs suffer little from distortion.

System can process up to 10 samples of 0.040 to 0.045ml each simultaneously, or 1.6ml sample in a single slot. Use of baffles in electrode compartments permit use of full-length platinum wire electrode without contamination of gel by electrolysis products. After electrophoresis, adjustable wire gel slicer (supplied with assembly) is used to cut gel into slices and expose fresh surfaces for staining.

Ordering Information: Includes vertical gel mold with comb. Plate-glass cover. Electrode vessels and plastic stand. Package of flannelettes. Gel slicing device. Three staining boxes, safety shield, and instruction manual.
9-531-100A411.00
 (Buchler 3-1070)

Sepraphore® Cellulose

9-528-129

Deluxe Electrophoresis Chamber

Gelman deluxe electrophoresis chamber can be used for all forms of conventional zone electrophoresis, immunoelectrophoresis, and thin layer chromatography by choice of supports.

Adjustable bridges hold media strips 7.6 to 30cm long. At any one time, unit accommodates up to nine 2.5x15cm (9-528-130) or 2.5x30cm (9-528-132) Sepraphore III cellulose polyacetate strips. Or you can load nine 9-528-145 glass slides for starch gel, polyacrylamide, paper media; or four 9-530-716 immunoelectrophoresis frames, or 9-528-126 support bridge for TLC plate or sheets. Media are held by vinyl-coated Magna-Grip magnetic tensioners.

High-impact polystyrene chamber is rugged, easy to clean. Transparent acrylic cover enables user to see separation of marker dye. Domed to prevent moisture drip, has airtight seal to facilitate vapor saturation.

Full-length platinum electrodes are in baffled chambers so electrode products do not reach media. Cathode selector switch allows operator to change direction of migration. (Indicator light identifies cathode.) Milliammeter accurately measures current through

chamber. Safety interlock cuts off current when cover is removed. Six chambers can be operated simultaneously from one 9-528-111 or 9-528-200 Power Supply (p 00).

Cooling coil in bottom of chamber used with circulating water to dissipate heat generated in long runs, high-voltage separations.

Supplied with 18 Magna-Grip tensioners, sample of 9-528-152 high-resolution buffer, manual of electrophoretic procedures. Chamber is 35Lx43Wx6.4cmH. Wt 3.2kg.

Polyacetate System

Sepraphore® III Cellulose Polyacetate Membranes

Fast, universal medium for separating: serum proteins (20 min), hemoglobins (30 min), LDH

(30 min), immuno reactions (60 min), lipoprotein (30 min), and other materials of medical and biochemical interest.

Purity and uniformity of non-absorbent cellulose polyacetate give much faster separations, with more sharply resolved zones than paper. Membranes can be used instead of paper in most commercial electrophoresis apparatus.

Sepraphore® X Membranes

Gelman Sepraphore X is a pure, uniform, nonabsorbent cellulosic membrane laminated to an inert plastic film, for electrophoresis and immunoprecipitin reactions. Recommended for serum proteins, hemoglobins, LDH isozymes, and CPK isoenzymes.

Similar to the widely-used Sepraphore III in speed and sharpness of separations. Support backing gives added advantage of easier

handling. Backing can be removed prior to scanning and filing.

Usable directly in most commercial electrophoresis apparatus including Gelman, Helena, Corning-ACI, Pfizer Pol-E-Film, Photovolt, and Millipore. Adaptable to various other systems. Slight procedural adjustments may be required, as explained in instructions accompanying each pack.

Gelman DCD-16 Densitometer

8-585-25

Single carriage design permits scanning of both micro and macro electrophoresis separations. For sample selection, carriage can be positioned either continuously or in sequential steps for 8 track electrophoresis.

Manual peak selection. Fractionates up to 15 peaks. Operator selects peaks with lead pencil for scanning and computation. Eliminates extraneous parts of electrophorogram. Digital results shown to 2 decimal places.

Features standard UV mode of operation. Useful for CPK tests and other isozymes. Automatic zeroing on fluorescent background. Phototransistor preceded by 0.5x3mm slit and UV cut-off filter. Peak output, 366nm.

Analog X-Y type serves system with thermo print-out. Eliminates ink and ribbons. Display area, 100x140mm, using 10x10mm grid.

Ordering Information: Heavy-gauge aluminum instrument with baked enamel finish. Solid-state processing. Totally digital readout. 45Lx47Wx22cmH. 115/230V 50/60Hz. Wt 23kg.

Electrophoresis Agarose

9-529-201

Corning/ACI Agarose Film Cassette System

Agarose galactose polymer gel gives higher resolution than cellulose acetate in electrophoresis of materials other than carbohydrates. It can be used for greater variety of separations than either cellulose acetate or polyacrylamide.

In patented Corning/ACI agarose film, flexible plastic backing is coated with uniform 0.38mm layer of gel containing 1.0% agarose, 5% sucrose, 0.035% EDTA, in 0.05M barbital buffer, pH 8.6.

Agarose universal film is used for most electrophoresis and immunoelectrophoresis techniques. Special films available for CPK, alkaline phosphatase, isoenzymes, hemoglobins, haptoglobins, other enzymes, and for immunoelectrophoresis of organ antigens.

Agarose film is in 11.4x12.7cm sheets with imprinted wells for 8 electrophoresis or 8 immunoelectrophoresis samples, 7 antibody troughs for immunoelectrophoresis (see p 292). Plastic covering keeps gel moist, makes soaking in buffer unnecessary. Gel and backing are transparent, can be quantitated in densitometer without clearing. Does

not fluoresce, so can be used in fluorescent enzyme techniques.

Film is used in Corning/ACI Cassette Electrophoresis System. Cassettes are hard-impact plastic with full-length carbon electrodes. Constant-voltage power supply unit plugs into end of cassette. Agarose films fit inside arched plastic cover, with ends in buffer wells. Two microswitches are actuated and electrophoresis begins when cover is put on cell. Operator merely times length of separation.

Ordering Information: Made up of 9-529-200 Cell and Power Supply; 9-529-202 Microliter Dispenser with 200 disposable tips; 9-529-203 Film Cutter; four 9-529-208 Stir-Stain Dishes with magnetic stirring bars and pk of 9-529-209 Liners; buffer and stains for 200 determinations (1 pk 9-529-220 Buffer, 1 pk 9-529-210 Amido Black 10B Stain, 1 pk 9-529-212 Ponceau S Stain, 1 pk 9-529-218 Fat Red 7B Stain). Agarose film is ordered separately.

Two-In-One Incubator and Oven

9-529-222

Compact (29Lx18Wx23cmH). Corning/ACI Model II Incubator/Oven has incubation compartment maintained at 39°C, drying oven at 72°C.

Incubation compartment maintains moisture-saturated 39°C film temperature for isoenzyme separations, immunoelectrophoresis. Moistened sheets of 9-529-225 filter paper maintain humidity level. Drying shelves can hold 4 agarose films (32 samples); incubator shelves, 2 agarose films (16 samples).

Forced-draft oven used to dry separations rapidly, minimizes diffusion of separated components. Shelves maintain 4 films (32 samples) at 72°C.

Ordering Information: Supplied with two incubator trays and shelves, two drying shelves, for use on 115V 50/60Hz. Wt 5.4kg.

Power Supplies

Constant Current/Constant Voltage Power Supply. Enables analyst to use either constant current or constant voltage for research. This assures maximum resolution and greater versatility. Solid-state circuits give regulated output ranges of 0-1000VDC ($\pm 0.25\%$) and 0.200ma ($\pm 0.25\%$) from 115V 50/60Hz. Ripple is $\pm 0.5\%$ of range. Has variable-output dials, voltmeter and milliammeter, range switch, and overload protection circuit. Dual terminals permit use with two or more electrophoresis systems at same time.

9-531-60750.00
(Buchler 3-1155)

Unregulated Power Supply. For electrophoresis in 0-1000VDC range (0-200ma). Variable output; separate voltmeter and milliammeter; polarity reversing switch. Use on 115V 60Hz.

9-531-110295.00
(Buchler 3-1009)

Unregulated Power Supply

For electrophoresis in 0-500VDC (0-200ma) range. Not recommended for vertical starch gel electrophoresis. Like 9-531-110 except for range. Operates on 115V 60Hz.

9-531-105255.00
(Buchler 3-1008)

Hydrolyzed Starch. For starch gel electrophoresis work specially formulated by Connaught Laboratories for vertical starch gel electrophoresis. Fisher is exclusive U.S. source.

9-531-105

Constant Current, Constant Voltage

Finest available for research or routine clinical electrophoresis. Use with Gelman chambers, Sepa Tek™ system, and other standard electrophoresis systems. Serves any application where closely controlled power source is needed.

Solid-state electronics give less than 1% output variation for line voltage changes. Ripple is damped to less than 0.3% of output. Fuses protect against burn-out from overload, short circuits.

Selector switch permits use for either constant-current (5-100ma) or constant-voltage (50-500VDC) electrophoresis. Triple-range meter: 0-20ma, 0-100ma, 0-500VDC. Automatic 60-minute timer shuts off current after preset time, rings alarm bell.

Two sets of jacks permit use with multiple chambers (up to 8 Sepa Tek chambers simultaneously).

9-528-200

Ordering Information: Steel case, baked enamel finish; 20Lx32Wx13cmH; with tilting support. Wt 6.8kg. Operates on

110/220V 50.60Hz
9-528-200
(Gelman 38520)

455.00

Power Supplies, Contd.

Constant Voltage Timed or Continuous

For constant-voltage electrophoresis with all Gelman chambers.

One-hour mechanical timer, bell, shuts off power after preset time. Switch permits continuous operation. Precision meters show current (0-25 and 0-125ma) and adjustable voltage (0-500VDC).

Universal output jacks are usable with spade terminals, banana plugs; 9-528-112 Dual-Terminal Lead permits operation of up to 8 Sepra Tek™ chambers simultaneously.

Case is 20Lx32Wx13cmH. Wt 5.4kg. Operates on 115V 50/60Hz.

9-528-111225.00
(Gelman 38206)

Dual-Terminal Lead. Permits operation of several electrophoresis chambers simultaneously, when used with 9-528-111 or 9-528-200 power supply.

9-528-1129.50
(Gelman 38261)

5 Convenient Electrophoresis Reagent Sets from Gelman

... or you can buy separate components. See p 286

(1) Hemoglobins

Ideal for routine screening and confirmation of sickle cell trait as well as other hemoglobinopathies. Practical for one specimen or mass screening. Assures exceptional resolution of Hemoglobins A,F,S,C. Set includes one each of following: pk of 12 hemoglobin buffers; four 30ml vials hemolysate reagent; 480ml Ponceau S solution; 480ml Sepra Clear II® solution; electrophoresis marker pen; pk of 50 absorbent papers.

9-528-19555.00
(Gelman 51293)

(2) Lipoproteins

Provide all reagents needed for lipoprotein electrophoresis based on use of Gelman Sepraphore® III cellulose acetate membranes. Results correlate directly with the Fredrickson classification for hyperlipoproteinemia. Provides superior lipoprotein separations with intense bands and light, uniform background.

Speed equivalent to fastest agarose methods. Entire electrophoresis procedure can be run in about an hour.

More convenient than techniques using agarose. Cost per test is ½ to ¾ less than competitive agarose systems. Materials have long shelf life. No shipping or dating problems as with agarose.

Includes: pk of 12 high resolution buffers, 480ml Oil Red O concentrated stain solution, 480ml rinse solution, 480ml Sepra Clear II solution, marker pen, pk of 50 absorbent papers.

9-528-19755.00
(Gelman 51294)

(3) Serum Proteins

All reagents needed to start serum protein electrophoresis program — at 10% saving over same reagents purchased separately. Set includes pk of 12 high resolution buffers, 480ml bottle Sepra Clear™ II, 480ml bottle Ponceau S solution, electrophoresis marker pen, pk of 50 electrophoresis absorbent papers, pk of six 2ml vials of protein electrophoresis control.

9-528-19455.00
(Gelman 51292)

(4) CPK Isozymes

This UV reagent set is useful for diagnosing myocardial infarction and other conditions marked by abnormal CPK levels.

Includes six 7.5ml of lyophilized CPK reagent and six 7.5ml of lyophilized NADP co-factor. Enough stable and sensitive reagents for 48 micro, 24 semi-micro, or 12 macro separations.

Technologist time for completing 8 tests: 15 min. Total running time: 65 to 95 min. Use on Sepraphore® III or Sepraphore X. Results easily interpreted with use of UV lamp (375nm). Tests can be run simultaneously with LDH isozymes.

With technical bulletin that details procedure.

9-528-19830.00
(Gelman 51914)

(5) LDH Isozymes

Includes specially developed substrate, supplies, and all necessary reagents for electrophoresis and visualization of lactic dehydrogenase isozymes. Reliable method for differential diagnosis, prognosis, therapy evaluation. Entire procedure, using Sepraphore III cellulose acetate membranes, takes only 90 min.

LDH isozyme substrate is usable under normal laboratory lighting. Surpasses freshly prepared substrates in specificity, staining intensity, and precision.

Easier than agarose methods. Results are superior. No dark background interference or stained albumin band. No need for agar overlay.

Supplied with 3 sizes of Sepraphore III membranes: widely used size 1x6" (2.5x15.2cm), 2 1/4x5" (5.7x12.7cm) for Gelman Sepra Tek™, 2 1/4x5 2/3" (5.7x14.4cm) for Beckman Microzone™.

Consists of 9-528-172 LDH isozyme substrate set, pack of 12 high resolution buffers, 480ml Sepra Clear™ II, electrophoresis marker pen, 3 packs of Sepraphore III membranes, 50 absorbent pads.

9-528-17055.00
(Gelman 51246)

LDH Isozyme Substrate Sets. Lyophilized substrate with diluent, for replacement in 9-528-170 reagent set. Store at 2°-8°C. Reconstituted product stable for 1 week under refrigeration, 1 day at room temperature.
(Gelman 51244, 51245)

Electrophoresis Components

Hemoglobin Buffer

Prewedged dry tris EDTA glycine buffer is pH 9.2 when contents of vial are dissolved in 750ml of distilled water. Provides exceptional resolution of Hemoglobins A, F, S, and C when used with 9-528-195 hemoglobin electrophoresis reagent set.

9-528-196Pk of 12 vials/18.00
(Gelman 51126)

Oil Red O Solution and Rinse Solution

Because of the critical nature of Oil Red O for lipoprotein electrophoresis, this solution has been specially prepared for rigorous requirements of the Gelman procedure. Together Oil Red O Solution and Rinse Solution provide highly reliable stain and rinse for lipoprotein phenotyping utilizing Sepraphore® III electrophoresis procedures. Sets contains 480ml Oil Red O Solution and 480ml Lipoprotein Rinse Solution.

9-528-16122.00
(Gelman 51239)

Hemolysate Reagent

Lyses washed or unwashed red cells, releases hemoglobin. Can be used in any hemoglobin electrophoresis procedure. 30ml.

9-528-190Pk of 4/21.50
(Gelman 51912)

Ponceau S Solution

Pre-mixed stain and fixative for serum proteins, hemoglobins, other proteins, in 7.5% trichloroacetic acid. 480ml bottle.

9-528-159Ea/8.25
(Gelman 51284) Case of 12/99.00

Ponceau S Capsules

Dry ingredients of stain. Dissolve in 100ml of 7.5% trichloroacetic acid.

9-528-156Pk of 20/8.25
(Gelman 51281)

RBV Reference Dye

Mixture of apalon yellow, amaranth red, and brilliant blue dyes. Yellow does not move; red and blue spots migrate towards anode, enabling analyst to check progress of electrophoretic separation. Bottle of 8ml.

9-528-1409.50
(Gelman 51250)

Sepra Clear™ II Solution

Renders Sepraphore® III, other cellulose polyacetate media transparent, increasing contrast for quantitation with densitometer. Destained strip is soaked in Sepra Clear (5 min), incubated at 80°-90°C (10 min). Bottle of 480ml.

9-528-160Ea/9.25
(Gelman 51283) Case of 12/111.00

Staining and Rinsing Tank

Polystyrene; capac 1500ml. For staining, destaining, and clearing electrophoretic media.

9-530-723Set of 4/16.50
(Gelman 51457)

Lyophilized Electrophoresis Controls

Protein Electrophoresis Control

Clarified lyophilized normal human serum containing all five normal serum proteins (albumin, alpha-1, alpha-2, beta, and gamma globulin). Running control with each unknown sample or group of samples cross-checks identity of separated proteins, confirms proper operation of electrophoresis system.

Serum is assayed for total protein by both manual and automated biuret methods, then assayed for protein fractions on Sepra Tek™ apparatus (see preceding page). Gelman densitometer is used to obtain fraction percentages, albumin/globulin ratio.

Contents of 2ml vial reconstituted with 2.0ml of distilled water.

9-528-191Pk of 6/15.00
(Gelman 51913)

Hemoglobin Controls

Easy to store. Stable for 3 years in lyophilized state prior to reconstitution. Reconstituted controls stable for 6 weeks under refrigeration.

Useful in any application of hemoglobin electrophoresis — recommended in sickle cell screening programs.

Set 1 Hemoglobins

Have 0.5ml each of Hemoglobins A, AC, and F.

9-528-151B47.25
(Gelman 51296)

Set 2 Hemoglobins

Have 0.5ml each of Hemoglobins AS, SC, and AA₂.

9-528-151C47.25
(Gelman 51297)

Total Control

Provides 0.5ml vials of 6 electrophoretically pure hemoglobin variants, including both normal and abnormal forms (Hemoglobins A, AA₂, AS, AC, SC, and F). Controls are run with patient samples. Immediately identify hemoglobin forms in each sample.

9-528-151A94.50
(Gelman 51295)

Evaporators

Fisher Model 190 Sample Concentrator

9-549

Reduces solvent volume after extraction and filtration

Utilizes controlled heat in conjunction with vacuum and/or gas purging to reduce solvent volume. Use for mass screening programs of urine samples for drug abuse and for analysis of samples for pesticide levels.

Instrument consists of three basic components: main unit with large heated well; aluminum sample block that sits in well; and sample rack that fits inside sample block. All housed in a compact, bench-top unit.

Sample block has hinged, glass, see-through lid and two serrated 4.8mm OD hose connectors: one for vacuum, one for inert gas purging. Sample rack holds 20 glass sample vials.

Control panel includes: ON/OFF rocker switch, dual pilot lamp (for power on and

heater operation), variable temperature control (calibrated in 5°C increments from ambient to 120°C).

To operate, place prepared samples in rack-held sample vial. Place rack in sample block. Place block in heated well. Warm at desired temperature. Make vacuum and/or purge connections. Combination of controlled uniform heat and vacuum and/or gas purging provides quick evaporation of large quantities of solvent and concurrently rapid concentration of sample.

Temperature-sensing thermistor and solid-state controller in conjunction with long-life strip heater assure temperature constancy. Indirect heating (in air or distilled water) of samples assures temperature uniformity. Individual purge-gas orifices over each sample vial for rapid concentration.

Specifications:

Sample Temp Range	Ambient to 125°C
Temp Set Pt Accuracy (80°C)	±2.0°C
Temp Constancy (80°C)	±1.0°C

Rotating Shaft Evaporator

5 times faster than conventional systems

Attach 50ml round bottom flask, half full of solution to be evaporated, to rotating evaporator shaft. Then connect vacuum line, pump or aspirator. Rotation spreads thin film of solution over large surface area of evacuated space. Evaporation takes place

up to 5 times faster than conventional methods. Since temperature increase is not necessary, units are excellent for use with biological extracts and heat-sensitive compounds.

Consists of motor-rotated shaft with 24/40 end for attaching vacuum pump or aspirator.

Ordering Information: With induction motor for inflammables. With 24/40 joint, side arm for attaching to clamp. Without clamp, flask, vacuum pump, or aspirator. For 115V 60Hz.

9-548-100195.00

Neoprene O-ring for 9-548. Makes tight seal between sleeve and rotating shaft.

9-548-5.....Pk of 12/3.00

Teflon® seals for 9-548. Ensures vapor seal between rotating shaft and sleeve.

9-548-10Pk of 12/2.64

9-548-100

Replacement Evaporating Flasks

PYREX® brand. Round bottom. Short neck, 24/40 joint. For 9-548-100, 9-548-150 and 9-548-151 Rotavapors, 9-548-200 evaporator. (Coming 4320)

Permanently Installed Evaporator

With continuous evaporation

Flash evaporator mounted in stainless-steel frame, has special evaporating and condensing flasks connected to revolving shaft supported by ball-bearing and nylon rollers. Inlet tube, introduced into evaporating flask through semi ball-joint, consists of double tube system for filling and withdrawing concentrated substance. Solvent evaporates, condenses in condensing flask and is scooped up and drawn out through vacuum system. Evaporation rate is 1.2 liters/hr at 50°C with 15mm vacuum.

Ordering Information: With motor, rheostat, splash guard, 500w immersion heater, automatic thermoregulator adjustable from 25° to 90°C within 0.1°C, 2-liter evaporating and condensing flasks, and 2 pans. Flasks with 24/40 joint and 50 to 2000ml capacity may be used for evaporation. For 115V 50/60Hz.
9-548-250455.00
 (Buchler FE-2C)

Replacement condensing flask. 2 liters for 9-548-250.
9-548-25434.80
 (Buchler C-102)

For water aspirator (9-956) that can be used as vacuum source for 9-548-250, see p 325.

9-548-250

Flash Evaporator

Spiral condenser Glass and Teflon® construction

Flash evaporator features spiral condenser with large surface area and special vacuum connection that keeps condensing side of unit stationary while evaporating side rotates to increase liquid surface area. Reduces distance of vapor travel. Continuous feed adapter, built into condenser assembly, feeds solution to evaporator flask at rate equal to evaporation. Glass and Teflon® construction prevents contamination. Ideal for evaporation of aqueous solutions, high boiling point solvents, strong acids and alkalies, radioactive materials.

Ordering Information: Consists of rotatable 90rpm heavy-duty sparkless motor, support

stand, glass spiral condenser, glass sleeve, continuous feed adapter, arm with condenser band clamp, 2 24/40 clamps, temperature controlled water bath consisting of stainless-steel pan and support bracket, 500w immersion heater, automatic thermoregulator adjustable from 25° to 90°C within 0.2°C. Without condensing and evaporating flasks (see 10-067 series on p 299). For 115V 50/60Hz.

9-548-200478.50
 (Buchler PTFE-1GN)

Replacement glass condenser. For 9-548-200. With 24/40, 14/20, and BS 28/15 joints.

9-548-20572.90
 (Buchler PF-1025A)

For evaporating flasks, see 10-067 on p 299

9-548-200

Rotavapor R

All-glass evaporator

Extract remains free of impurities

9-548-150

With Rotavapor R, extracts are free from impurities resulting from abrasion of glass, metal, sealing material, lubricants.

Operates by rotating retort in heating bath, increasing evaporation surface, and concentrating solutions gently under slight temperature drops. By regulating immersion depth into water bath, temperature of bath, rotation speed (30-240rpm), degree of vacuum and temperature of coolant, distillation with Rotavapor can meet most requirements.

Ordering Information: With laboratory V-stand, glass vapor

duct and retort, 1000ml evaporating flask with $\frac{3}{4}$ 24/40 joint, cooling condenser unit with vacuum and coolant connections, 1000ml receiving flask with socket joint, clamp, glass introduction pipe. Without water bath. For 115V 50/60Hz. Shipping wt 20kg (45 lb).

9-548-150320.25

With water bath. Same as 9-548-150 but with 4-liter stainless-steel water bath, adjustable 1200w heater, and quick-action jack.

9-548-151602.70

Receiving Flasks

PYREX® brand. Round bottom, short neck, socket joint, 35/20 $\frac{3}{4}$ joint. For 9-548-150 and

Mixer-Evaporator Combination

Handles 10 fractions simultaneously
at rate of 1ml/min

9-548-300

Rotary Evapo-Mix evaporates multiple fractions from test tubes of 16-25mm dia in 10-20 min under reduced pressure. Consists of base and water bath, 10-test tube platform, temperature control unit, vacuum manifold.

Water bath is heated to desired temperature. Manifold inner tube is connected to circulating cold water source. Tubes containing sample are clamped into place on vibration platform. Water aspirator or mechanical pump vacuum source is connected and motor turned on. Controlled circular vibration of platform creates deep swirling in each tube, exposing large surface area of solution to vacuum.

Ordering Information: With 750w immersion heater, variable vibration control, borosilicate glass manifold, 10 bulb-bridge assembly. For 115V 50/60Hz. Shipping wt, 25kg (54 lb).

Vortex Mixer/Incubator/Evaporator

Complete sample preparation station

Complete sample preparation station for RIA/CPB, drug abuse screening, electrophoresis, TLC, gas chromatography, and quality control applications.

It heats, cools, mixes, or evaporates — individually or in combination. Saves sample preparation time. No need to move sample containers from one appliance to another.

Place samples (in test tubes, scintillation, or centrifuge tubes) directly into holes in sample block (top of unit). Interchangeable sample blocks accommodate different size tubes.

Vortex mixer with solid-state speed control produces varied, reproducible speeds. Speed range: approximately 0 to 1600 rpm (depending on load and line voltage). All samples, regardless of position in sample block, are vortexed with equal efficiency.

Proportional contact heater with thermistor control heats from ambient to 80°C ($\pm 1^\circ\text{C}$). Make settings on front control panel.

Incubate or evaporate at reduced temperatures, use accessory 9-548-331 cooling plate. Attaches directly to vortex-evaporator. You can circulate water or refrigerant through plate for highly efficient cooling.

Vacuum control system automatically regulates evacuation rate. Initial evacuation rate is very low. Then slowly increases to maximum pressure. Prevents tubes from bumping. No sample loss. Accessory cover provides vacuum seal.

Ordering Information: Cast-aluminum base with front control panel, vacuum control system, solenoid controlled bleeder valve. With tube of thermal compound and instruction manual. Without sample blocks, vacuum covers, vacuum source, trap, cooling plate, or tubing. (See accessories below and tubing, p 1202).

Rotavapor M . . . Semi-Micro Evaporator

Change from reflux to distillation without stopping unit

Compact Rotavapor M is ideal for organic synthesis and analysis work. Performs semi-micro rotary evaporation, Grignard reactions, Friedel-Crafts acylation reactions, esterification of carboxylic acids. Accessories are available for solid/liquid extractions using Soxhlet method, and fractional distillations and lyophilizations with a cold trap condenser.

Designed for 5 to 100ml volumes. Rotation speed of evaporating flask fixed at 150rpm. Vacuum as low as 0.5 to 1.0 Torr can be applied.

Revolving condenser handles organic reflux reactions as well as solvent evaporations.

You can change from reflux to normal distillation either under atmospheric pressure or vacuum without turning off unit.

All glass parts have threaded necks (no ground-glass joints). Eliminates need for vacuum grease and possible sample contamination.

Ordering Information: Complete unit is only 69cmH. Takes less than 61cm of bench space. With: 4 evaporating flasks in 30, 50, 100, and 200ml sizes; 3 receiving flasks in 50, 100, and 250ml sizes; set of spare vacuum seals; and either a V-stand (supports evaporator apparatus) or thermostatically-controlled heating bath.

Drug and Chemical Blood Level Data Chart

Two-colored notebook-size chart, published by Fisher, is available without charge to toxicologists and other forensic and life science personnel. Almost 180 different substances listed. From Acetaminophen (Tylenol) to Zoxazolamine (Flexin). For each, chart gives therapeutic or normal ... toxic ... and lethal levels in blood serum or plasma. For your free copy check 5 on reader-service card at end of blue index pages.

9-550-5

Extraction Apparatus

Complete Three-Piece Assembly with Allihn Condensers

PYREX® brand

Same as 9-551 series except made of PYREX® brand glass. With 9-557 series Allihn type condenser, 9-558 series Soxhlet extraction tube with 24/40 joints at bottom, and 9-559 series flask. All connected by interchangeable ground joints. (Corning 3840)

Microchemical Extraction Apparatus

PYREX brand. Furnished with an indented West type condenser, with 100mm jacket, 30ml flask, and extractor. 24/25 joint between condenser and extractor; 12/18 joint between extractor and flask. Extractor: 90Lx20mm dia. Over-all H, 351mm. 20-650.....Ea/54.31 Case of 3/146.64 (Corning 3860)

Micro extraction thimbles. For use with 20-650 apparatus. Made of fat-free filter paper, without seam. 50Lx10mm dia. 20-653.....Box of 25/9.00

20-650

Extraction Apparatus for ASTM D231 and D147

Determine grease in knit goods and test mastics and grouts. Consists of block-tin condenser with copper cover and wire for holding siphon-cup, 9-600 flask, 9-590 siphon-cup. 9-585.....27.00

Condenser only. Block-tin condenser with copper cover and wire for holding siphon-cup. 9-586.....16.25

Siphon-cup only. Uses 9-656A thimbles. 9-590.....4.00

9-585

Flask only. PYREX brand. Flat bottom, wide mouth, 400ml. Suitable for rubber extraction. 9-600.....Pk of 6/10.74 Case of 24 38.64 (Corning 5240)

Extraction Flasks

General Purpose Flasks

PYREX® brand. Flat bottoms, wide necks, flared tops. 50ml and 100ml sizes suitable for microchemical applications. (Corning 5160)

Bailey-Walker Flasks

PYREX brand. Three indentations blown into sides to guarantee accurate centering of thimbles. Tolerances in diameter of top of flasks are minimized to permit uniform fit for standard metal condensers. 53 OD x 160mmH.

9-651Pk of 6/19.26
Case of 18/52.02
(Corning 5180)

9-651

Rubber Sediment Analysis

For analysis of rubber and sediment in liquid fuel. PYREX brand. 250ml capac. Underwriters Laboratory type. Reference: U.S. Bureau of Mines Method 300.2.

9-624-5Pk of 6/11.94
Case of 24/42.96
(Corning 5260)

9-624-5

Fermentation Tube

For water and sewage determinations

Traps gases generated by fermentation when microorganisms are present in sample. Vertical tube: 140Hx15mm ID. Bulb dia, 38mm. Tubulature long enough to accommodate plug. With plastic foot; removable for autoclaving. Meets APHA standards.

9-689Ea/3.30
Pk of 6/17.75

9-689

Extraction Apparatus/Fermentation Tubes

Extraction Thimbles . . . for Filtering

PYREX® brand glass. Chemically resistant. Insensitive to attack by most chemicals. Borosilicate glass with fritted disc of coarse porosity. Useful to weigh extracted materials. Placed inside extraction tube to filter out impurities. (Corning 33950)

9-653

Unitized Extraction Assembly

9-678

Heats 38 to 51mm OD condensers for distillation, digestion, extraction applications.

Cast-aluminum 11cm dia hot plates with 300w heating elements. Reproducible temperature settings from 149° to 413°C. Heaters elevated on perforated support for ventilation.

Ordering Information: Baked enamel steel housing with 2 vertical and 2 horizontal 13mm dia stainless-steel support rods and 12 nickel-plated bronze clamps for holding glassware setups. Without glassware. 24Lx77Wx76cmH. For 115V AC/DC. Terminal block connection. Shipping wt, 17kg(38 lb).

9-678525.00
(Precision 65500)

Replacement heating unit. For 9-678.

9-67922.00
(Precision 65508)

Fat/Oil Extractor

9-680B

Goldfish fat extractor for solvents with boiling points to 85°C. Used in official control work. Acceptable for AOAC method.

Process involves placing sample between boiling solvent and cold surface. As boiling continues, solvent vaporizes, condenses on cold surface, washes back through sample into boiling solvent below. Solvent chamber is beaker which is weighed before extraction begins and after final evaporation. Difference between these 2 weighings indicates amount of extract. Process takes 4 hours.

Ordering Information: Metal condenser assembly. Cement embedded 100w heaters. Automatic release valves on condensers allow closed system of extraction and prevent explosion. With glassware. 25Lx94Wx81cmH. For 115VAC, 600w. Shipping wt, 39kg(85 lb).

9-680B1445.00
(Labconco 35001)

Replacement Parts for Fat/Oil Extractor

Beaker. Borosilicate glass with ground lip.

Reclaiming tube. Borosilicate glass.

9-680-10Pk of 6/12.25
(Labconco 35062)

Heating element. 100w Chromalox.

9-680-147.50
(Labconco 35022)

Extractor: Crude Fiber in Feeds

9-681B

Apparatus determines crude fiber in feed, food, other agricultural products as outlined in AOAC methods. Amount of crude fiber is determined by subjecting sample to simulated digestive action. Samples are boiled in acid, washed, boiled in alkali, and washed again. Remaining isolated solids are termed crude fiber.

The beaker is held rigidly between the heater and condenser during digestion. Keeps acid and alkali at constant volumes during boiling.

Ordering Information: Holds 6 samples. With 2 sets of beakers. 25Lx104Wx81cmH. For 115 V 60Hz, 2100w. Terminal block connection. Shipping wt, 41kg(91 lb).

9-681B1250.00
(Labconco 30001)

For replacement beaker, see 2-545F, p 84.

Replacement Parts for Extractor

Condenser. Borosilicate glass.

Cone style resistance coil.

9-681-814.20
(Labconco 30066)

Gelman Metrical Filter Membranes

9-730-162

For basic biological filtering. Has wide latitude of applications from cold sterilization to high volume air sampling. See chart for applications of each pore size.

High heat stability (150°C) of cellulose triacetate construction permits extensive autoclaving without beiling, distortion, or disintegration.

Chemically compatible with water, alcohols, glycols, and many hydrocarbon solvents.

Vinyl Metrical Filters

For large volumes of concentrated acids, bases, and many solvents

Recommended for high-volume liquid or gas filtrations including air sampling. Low moisture pickup (0.4%) suitable for precise gravimetric applications.

Constructed of flexible strength polyvinyl chloride. Not autoclavable. Ethylene oxide sterilization recommended. Withstand dry heat to 68°C.

9-730-74

Ordering Information:

Type VM-1, 47mm dia. Not gridded. Pore size, 5µm. 47mm dia. 9-730-74Pk of 100/25.00 (Gelman 60693)

VM-1, 47mm dia. For air sampling and gravimetric analysis. Especially recommended for use with 20-070-12 Cahn Filterweigh System. (See p 36.) High flowrates and exceptional weight stability. 37mm dia. Pore size, 5µm. 9-730-73Pk of 100/24.00 (Gelman 60714)

Gelman Filters (DM-450) for gravimetric analysis of airborne particles

Also for filtering deionized water. Pore size, 0.45µm. Dia, 47mm. 9-730-105.....Pk of 100/26.25 (Gelman 64515)

Acrodisc™ Syringe Filter

9-730-217

Combination membrane filter and disposable filter holder

Combination 25mm membrane filter and disposable filter holder in one unit. Simply position Acrodisc™ on end of syringe. When you depress syringe plunger, fluid is forced through sealed-in membrane filter. When plunger pressure builds up and fluid is difficult to discharge, discard Acrodisc and replace it with a new one. No need to disassemble, clean, or reload as with conventional filter holders.

Transparent polycarbonate lets you observe particulate accumulation. Luer taper inlet and outlet. Leakproof. Available pre-sterilized or non-sterilized. With Acropor® or Tuffryn® membrane filters.

9-730-218

Ordering Information:

1.2µm Non-Sterilized. Contains Acropor membrane filter. Primary uses: air or gas sterilization and solution clarification. 9-730-217Pk of 50/32.50 (Gelman 4190)

0.2µm Pre-Sterilized. Individually packaged. Each contains supported Tuffryn membrane filter. Primarily used for sterilizing solutions. 9-730-218Pk of 50/37.50 (Gelman 4192)

0.45µm Pre-Sterilized. Contains Acrodisc membrane filter rather than Acropor filter. Can be autoclaved for critical pharmaceutical and electronic applications. 9-730-219Box of 50/37.50 (Gelman 4184)

GN-6 Metrical® Filters

For basic bacteriological applications

9-730-100 9-730-101

For determining coliform and bacteria levels in water, sewage, and dairy products by APHA method. Also for yeast count in beer, bacteria count in urine, and sterility testing. Formulated specifically to support microbiological growth. Bacteria grow freely on filter surface while nutrient broth diffuses readily through membrane. Constructed from polymer of cellulose esters. Chemically compatible with water, most hydrocarbons, glycols, and variety of solvents. Sterilized at 125°C or with ethylene oxide.

Flow rates at 70cm Hg differential pressure: air, 8.5 liters/min/cm² and liquid, 70ml/min/cm². Pore size, 0.45μm. Dia, 47mm.

Ordering Information:

Gelman No.	Type	Cat. No.	Pk of 100
63069	Plain	9-730-100	20.50

Pre-sterilized pack. Gridded.

9-730-102Pk of 100/19.00
(Gelman 63077)

Autoclave pack. For placing directly in autoclave. Color-coding on pack changes from pink to brown indicating contents are sterilized. Gridded.

9-730-103Pk of 100/19.00
(Gelman 64194)

Single pack for biological water analysis. Each membrane is individually sealed in its own non-resealable pouch and sterilized. Gridded.

9-730-106Pk of 1000/145.00
(Gelman 66068)

Absorbent pads. Ideal for microbiological procedures. Pure cellulose fiber 47mm dia pads packed in cartridges. Each cartridge holds 100 pads. Kit includes 10 cartridges, 1000 pads, and hand dispenser.

9-730-10715.00
(Gelman 66025)

GN-6 Metrical Filters

For sterility testing of antibiotics, narcotics, food

9-730-110

GN-6 Metrical filters with 3mm hydrophobic edges. Aqueous solutions readily pass through filtering area without penetrating or adhering to water-repellent rim.

Useful for in-line filtration applications where ability to pass air helps eliminate drip- or air-locks in production filling cycles. Must retain 100% of *Serratia marcescens* to meet quality controls.

Made from polymer of cellulose esters. Autoclavable without distortion or cracking. Dia, 47mm. Pore size, 0.45μm.

Flameless Electric Burner

Produces a controllable, flowing, heated stream of air up to 600°C. Heat is produced by air flowing continuously over an electric filament with a life of several thousand hours.

Switch turns burner on and off. Lighted switch indicates power "on". Burner heats-up in just 60 sec. No gas supply necessary.

Burner can be used in either vertical position (rests on bench) or horizontal position (hand-held like a staple gun).

With power cord, air hose and permanently attached nozzle. Burner: 24cmH. Base: 7x17.5cm. Full information p 117.

3-89099.00

Tuffryn® Membrane Filters

Filter and sterilize deionized water, cosmetics, beverages, biologicals

9-731-115

Mixed cellulose ester membrane filters reinforced with internal polyester mesh for strength and durability. Eliminates cracking during handling or loading.

Nonpyrogenic and non-irritating. Autoclavable. Maximum flow rate slightly lower than unsupported membranes. Equal or better for water and I.V. solutions. Fit most standard filter holders. In two pore sizes, 0.45 and 0.2 μ m.

Acropor®-AN-800

9-730-188

Removes yeast, lowers bacteria count

In beer, wine, juices, and soft drinks. Also clarifies motor fuels. Made from acrylonitrile polyvinylchloride reinforced with nylon. Heat tolerance, 124°C. Pore size, 0.8 μ m. Dia, 47mm
9-730-188.....Pk of 100/26.00
 (Gelman 61194)

Gelman Glass Fiber Filter . . .

Recommended for National Air Sampling Network procedures. Removes 99.7% of particles larger than $0.3\mu\text{m}$. Inert to common solvents. Will not denature biological fluids. High temperature tolerance of 482°C .

Manufactured from pure micro-sized filaments of glass treated in muffle furnace to remove contaminants. With acrylic binder to provide high wet strength for liquid filtration.

(Gelman 61638)

Spectro Grade Glass-Fiber Filter

For air pollution

Use with high volume sample collectors. Collect samples at $2\text{m}^3/\text{min}$ for 7 days. Temperature range, -50° to $+49^\circ\text{C}$.

Unlike other glass-fiber filters, Spectro Grade filters absorb negligible amounts of SO_2 from atmosphere.

High purity insures low, uniform trace element background. Collected metal-containing particulates will not be masked by elevated background counts.

Minimum of 99.95% retention for particles of $0.3\mu\text{m}$. For continuous use at temperatures up to 93°C . High tensile strength. Tear-resistant. Can be folded for complete recovery of retained particles.

(Gelman 64948)

Bacterial Air Vent

Delivers sterile air

Produces low volume of gas or air free of particles and organisms. Removes 99.95% of particles larger than $0.3\mu\text{m}$ (DOP test). Max line pressure, $1.41\text{kg}/\text{cm}^2$.

Can also be used to clean parts, flush instruments, handle bio-isolation of vacuum sources. All without cleaning or disassembling apparatus.

Use as vent for receiving vessels, sterile breathing barriers, environmental chambers. Eliminates need for cotton-stuffed tubes and associated problems of contamination and liquid absorption.

Tough, heat-stable polycarbonate disc-shaped vent with inlet/outlet connections for on-line applications. Spectrograde glass-fiber filter inside vent housing. Use as a disposable in critical applications. Sterilize by any standard

method including multiple autoclavings.

Ordering Information: 36Lx41 mmW. Dia, 37mm. Inlet and outlet OD, 4.8mm.

Metrigard™ Pre-Filter

Extends service life of membrane filter

Metrigard™ pre-filter retains contaminates most responsible for membrane clogging. Viscose biological solutions pass freely through membranes after Metrigard pre-filtration. Designed for use with Gelman GA Metricel membranes but has many other applications.

Has acrylic binder for greater wet strength. Because Metrigard is asbestos-free, it is highly recommended for pharmaceutical and physiological solutions. Asbestos fiber is considered to be carcinogenic.

Fits into existing membrane and fibrous type filter holders

Polyethylene-Covered Lab Notebooks and Sheets

Protect valuable data

11-906

Pocket Data Books

Only 11x20cmW . . . fit most pockets. Green polyethylene-covered notebook with 32 polyethylene-coated pages. Perfect for ecologists, oceanographers, biologists, and general field work.

Pages are washable, lint-free, chemically resistant, ruled (3 lines per inch or 12 lines per 10 centimeters) on both sides. Won't discolor, curl, or tear. Remain flexible at cold temperatures. Resist ultraviolet light, mildew, dirt. Write on them with pencil (even when wet or underwater), felt-tip and ball-point pens, grease pencil. Cover provides firm writing surface. White plastic binding won't rust. Completely waterproof, it even floats.

11-906Pk of 4/12.96
(Nalge 6306) Case of 12/34.99

11-902

Field Notebook

Won't self-destruct in the field. Black polyethylene cover with 48 treated polyethylene 29x23cmW pages. Pages numbered 1 through 96 and printed with fine green grid. Pages are washable and they dry flat. Endure salt water, mud, chemicals, all kinds of dirt. Cover bound with staples is completely waterproof.

Can be written on wet and even under water with ordinary pencil. Accepts most all writing devices including ball-point pen, felt tip marker, indelible and grease pencils.

11-902Ea/6.90
(Nalge 6303) Case of 6/37.26

11-905

PolyPaper™ Plastic Sheets

Endure salt, water, mud, chemicals. Specially-coated polyethylene blank 22x28cm sheets that accept ordinary pencil anywhere — even under water. For typing and printing in addition to wide range of hand markers.

Resist UV light, tearing, fraying, curling, aging, discoloration, rot and mildew. Roll or fold without cracking. Remain flexible at cold temperatures.

May be punched for use in three-ring binders. Cut into labels for enclosing with wet or dry chemicals and biological samples.

Small Batch Filtration System

Produces sterile, ultra-clean liquids up to 19 liters

9-731-100

Everything you need for small batch filtration in one complete system. Easily adapts to meet special requirements of wide range of applications. Excellent for filtering aqueous solutions, vegetable oils, blood serum, protein solutions, tissue culture media, intravenous additives, ophthalmics, laboratory solvents, bacteriologic broth media, and many other liquids that must be sterilized or made ultra-clean.

Three major components of system include: pressure vessel, filter holder, and 19-liter receiving vessel. After system is assembled, liquid in pressure vessel is pressurized by outside gas source. Under pressure, liquid flows from vessel through hose assembly to filter holder. Liquid passes through glass fiber filter in holder. Then travels through another hose assembly to 19-liter receiving vessel. Liquid filtrate is later dispensed to small vials and bottles from receiving vessel.

Special system components make operation convenient and versatile. Quick disconnect hose fittings for easy switching from one tank to another. Kit for bubble point determinations.

Bacterial air vent filter for processing of liquids within completely closed filtration environment. (See 9-730-125, p 312.)

Fast lever hose clamps for accurately filling vials and bottles with just one hand. (Clamps also allow easy disconnection of tubing from filter holder so receiving vessel can be moved.)

All system components are autoclavable. Individually available replacements. 90mm dia disc filter holder available separately for customizing system.

Ordering Information: Includes hose assemblies for gas, liquid, and filtrate. Quick disconnect assembly. Sanitary assembly. 19-liter receiving vessel assembly. Pressure vessel. Bubble point bypass kit. 142mm disc filter holder. Polypropylene spacers. Type A/E glass fiber filters. Metrical® filters, and procedures manual.

Small Batch Filtration System

Replacement Parts and Accessories:

9-730-235

142mm Disc Filter Holder

Stainless steel. For safe filtering of reagent and solvent volumes. Excellent for pressure filtration of allergens, laboratory solvents, ophthalmics, pharmaceuticals, vitamins, make-up water, and antibiotics. Useful for cold sterilization with GA-8 or Alpha-8 Metrical® membrane filters with 0.2µm pore size. Effective filtration area, 126cm².

Thick flanges permit operating pressures to 7kg/cm². O-ring seals membrane; prevents outside leakage. With sanitary inlet/outlet connections with no exposed threads. Fully autoclavable. Highly polished to combat contamination.

Ordering Information: Prefilter size, 127mm. O-ring OD, 130mm. O-ring cross-sectional dia, 4.8mm. Wt 6.8kg (15 lb).

Small Volume Filter

Two-part filtration apparatus consists of 100mm heavy-duty shaft with 25mm threaded neck and straight funnel with ground flat flange. Shaft and funnel held together by threaded polypropylene collar around shaft's neck. Removable, fritted disc inside neck holds 25mm membrane filters in place during filtration. Fits standard Erlenmeyer filter flask with No. 6 rubber stopper. Autoclavable.

9-75018.00

Filtration Apparatus with Stopcock. Same as 9-750 but with Teflon® stopcock.

9-75125.00

Manifold. Holds up to six 9-750 or 9-751 filtration assemblies.

9-75272.00

Fisher Filtrator®

Collects filtrate directly in container

9-788

9-789

Low Form

Accommodates beakers to 400ml. Filtrator used for vacuum filtration with filtrate collection going directly into receiving beaker. Needs only $\frac{1}{3}$ the time used by slow gravity method of filtering.

Place receiving vessel up to 400ml on rubber padded platform. Place bell over vessel and tighten with wire bail. Insert funnel with rubber stopper into bell opening. Place folded 11cm filter paper into funnel. Pour filtrate into funnel. Turn vacuum switch on. Filtrate is collected into receiving vessel. Precipitate collects on filter paper.

Designed so that several units may operate in series from single vacuum source. Special valve construction eliminates interference between filtrators in series. For vacuum source, 9-956 Airejector on p 325 is recommended.

Ordering Information: Filtrator consists of glass bell; double-walled porcelain funnel with inner walls having slits; and metal base with vacuum connection and control.

9-78885.00

Replacement rubber stopper. For 9-788.

9-788-2Pk of 6/4.00

Replacement borosilicate glass bell. For 9-788.

9-788-56.70

High Form

Accommodates flasks to 500ml. Similar to 9-788 except with 11 ODx35cmH glass cover. For standard solution preparation and other volumetric work where filtrate is diluted to definite volume.

9-78996.00

Replacement borosilicate glass cover. For 9-789.

9-789-531.50

9-760

Filter Paper Holder

Holds filter paper in funnel when vacuum is applied. Perforated, seamless nickel cone. ID, 38mm. Has 60° angle to fit standard filtering funnel.

9-76012.75

For replacement funnel, see 10-352 on p 373.

Protein Concentrators

9-743-60

For Molecular Weights Over 25,000

Collodion bag apparatus consists of vacuum vessel, outer glass tube mounted through rubber stopper, and inner glass tube with plastic sleeve. Place outer tube in vacuum vessel. Add 140ml of distilled water or Ringer's solution. Place under vacuum of 500mm Hg. Pull collodion bag over tip of inner tube and insert into vacuum vessel through outer glass tube. Pipet sample into collodion bag through inner glass tube. Collodion bag passes small particles while retaining and concentrating large protein molecules.

9-743-6016.50

Collodion bags for 9-743-60.

FISHERbrand® Filter Papers

Dependable uniformity and purity
Savings up to 50% vs competitive papers

Quantitative Ashless Grade Circles

Double acid washed. Ash content not exceeding 0.010%. Meets ASTM "ash content per circle" requirements. Box contains 100 sheets, plastic-wrapped to protect purity.

	Coarse Porosity			Medium Porosity			Fine Porosity		
Flow Rate	Rapid			Medium speed			Slow		
Surface	Smooth, open texture			Smooth			Smooth, dense		
Applications	Suitable for coarse and gelatinous precipitates which require thorough washing on paper.			Retains lead sulfate, calcium oxalate, magnesium-ammonium sulfate. Suitable for general gravimetric analysis. Test for silica in steel.			Excellent retention. Suitable for finest precipitates: metastannic acid, barium sulfate. Usable for vacuum filtration.

Qualitative Grade Circles

	Coarse Porosity			Medium Porosity			Fine Porosity		
Flow Rate	Rapid			Medium speed			Slow		
Surface	Smooth, open texture			Smooth			Smooth, dense		
Applications	Suitable for coarse and gelatinous precipitates. Retains Fe(OH) ₃ , Al(OH) ₃ , metallic sulfides, iron ores. For clarifying solutions, oils. For zinc analysis (Fe ppt removal). Size 19cm (9-804) widely used for sugar analysis.			Serves general lab uses: clinical testing, clarifying pharmaceuticals, spot tests. Popular in schools for general chemistry, qualitative analysis.			Excellent retention. Suitable for finest particles or precipitates. Used for boiler water testing, pigment studies, analysis of zinc, titanium. Usable with vacuum.

Filtering in the dark?

Turbidimetry provides a convenient, quantitative means for gauging filtration efficiency. Fisher DRT-series turbidimeters are direct-reading instruments with the high sensitivity needed for testing clear filtrates. Lab model for one-at-a-time samples. On-stream models for monitoring continuous flow through process filters.

Tells you whether a filter is still working and when it needs changing. Avoids wasting filter materials or spoiling yields. Helps you select the right filter for a job in terms of product and budget requirements.

Fisher turbidimeters are easy-to-use, dependable. See pages 1230-1233 for details.

A new twist in sample filtration:

SepaRite filter tube has porous plunger bottom with one-way valve. Press into 16mm OD test tube containing sample. Filtrate rises into SepaRite tube, free of particulates down to 10µm. Just twist and lift to remove tube of filtered sample. Great for transfer of supernatants and for separating immiscible layers. Fast. Disposable. Chemically clean. Inert. Three sizes. See page 562 for details.

Special Purpose Filter Papers

For Sugar Analysis:

Filter paper circles. 19cm dia. See 9-804, Grade CP-QL, in preceding table.

For Metallurgical Analysis:

Filter paper sheets. Retain coarse and gelatinous precipitates. Rapid flow rate. Ash content 0.04%. 57Lx46cmW.
9-898-5Box of 100/26.00

For Examining Contamination:

Ruled filter paper. Used in food and drug testing to measure contamination. Ruling facilitates microscopic examination. Resists action of gasoline, oils, alcohol, water. Dia, 7cm. Package of 1000 sheets.

9-896Pk/13.00

For Antibiotic Assays:

Filter paper discs. Use with 7-906 Fisher-Lilly Antibiotic Zone Reader. Dia, 12.7mm.

9-897Box of 1000/3.85

Anti-Clogging Filter Aid:

Paper pulp. Add to solution to prevent clogging of filter paper. Fibers form porous mat to minimize caking of fine precipitates. Dustproof glassine-lined qt (0.95 liter) bags.

9-947Bag 4 25

Other Filtering Aids:

Asbestos Fiber. See p 11

Asbestos Paper. See p 11

Celite Analytical Filter Aid. See C-211 and C-212 in Chemical Index.

Chamois Skin. See p 170

Cheese Cloth. See p 198

Whatman Filter Paper

Qualitative Grade

0.06% max ash. For qualitative analysis, clarifying solutions, and collecting precipitates in intermediate stages of quantitative analysis. Five porosities available.

Circles Coarse Porosity Whatman 4

Filters 98% of 20-25µm particles at very rapid flow rate.

Dia	Cat. No.	Box of 100
7cm	9-825A	1.00
9	9-825B	1.30

Whatman 1PS Disposable Phase Separator

Blocks aqueous phase, solvent passes through

Hydrophobic sheet rapidly and cleanly separates liquid phases — even if one phase is in form of suspended droplets in the other. Saves time and effort in solvent extraction. No loss of filtrate. No prior separation needed.

Can be used in place of conventional separatory funnels. Separates aqueous solutions from water-immiscible solutions. Retains aqueous layer while organic layer separates through. Also filters out any solids present in system.

Usable with organic solvents that are lighter or heavier than water. If solvent is lighter than water, it will migrate to edge of water meniscus and pass through paper, leaving water phase behind. If heavier than water, solvent will pass directly through paper and water will be retained.

Use folded like filter paper. Aqueous phase will slowly seep through if left for extended period of time.

Dia	Cat. No.	Box of 100
9.0cm	9-874-50	3.50
11.0	9-874-52	5.50
12.5	9-874-54	7.00
15.0	9-874-56	9.75

9-874-50

Whatman Glass Microfiber Filters (GF Series)

Micron-size particle retention
Very fast flow rate
High solids capacity

Filtering speed can be as much as 100 times faster than ordinary filter paper. They retain micron-size particles (0.7 to 2.7 μm) — but don't require special holders like membranes. They cost less, too.

Borosilicate glass. No binders. Doesn't fluoresce. Resists anything but fairly strong alkalis. Great for scintillation analyses because refractive index is same as solvents in most scintillation "cocktails". Drop filter and sample right in scintillation vial . . . filter becomes invisible; counter "sees" only sample. Use glass filters to clean hot gases at up to 500°C. Cellulose or membranes burn up.

Five grades available:

GF/A Filters

For precipitated protein, cell debris

Widely used in biochemistry. Ideal for scintillation counting and air pollution analysis.

Dia	Cat. No.	Box of 100
2.1cm	9-874-10	3.00
2.4	9-874-12	3.25
4.25	9-874-14	4.00
5.5	9-874-16	4.50

GF/B Filters

Increased thickness for greater retention

A thicker version of grade GF/A providing higher retention efficiency, higher particle capacity, better wet strength. Great for samples with high solid content.

Dia	Cat. No.	Box of 100
2.1cm	9-874-20	6.25
2.4	9-874-22	6.45
4.25	9-874-24	8.55
5.5	9-874-26	11.00

GF/C Filters

Standard for suspended solids in water analysis

For small particles in low concentrations.

Dia	Cat. No.	Box of 100
2.1cm	9-874-30	6.65
2.4	9-874-32	6.95
4.25	9-874-34	8.40
5.5	9-874-36	10.75

GF/D Filters

Efficient pre-filter for membranes

Use wherever filtration of fine particles is extremely slow or tedious. Maintains high flow rate. Retains particles down to 2.7 μm . Final filter flow rate not significantly reduced. At least 10 times faster than cellulose or sintered glass filters of same diameter under same conditions . . . 100 times faster than conventional folded cellulose filters twice the diameter.

Dia	Cat. No.	Box of 100
2.0cm	9-874-40	3.85
2.2	9-874-42	3.85
2.5	9-874-44	3.85
3.5	9-874-46	4.20
4.7	9-874-48	5.50

GF/F Filters

Submicron particle retention

Retains particles down to 0.7 μm from liquids and 0.01 μm from air. Useful for filtration of fine suspensions of denatured proteins, small cells and cell fragments, collections of bacteria, critical radiochemical particles. Exceptionally strong when wet — due to large number of inter-fiber bonds.

Dia	Cat. No.	Box of 100
2.1cm	9-874-60	10.50
2.4	9-874-62	11.00
2.5	9-874-64	11.00
4.25	9-874-66	14.75
5.5	9-874-68	18.75

Choice of Four Filter Pumps

9-956

Fisher Airejector™ Aspirator

Provides typical free air capacity of 1.4 liters/min at water pressure of 2.8kg/cm². Can be used in urea nitrogen test by aerator method, for cleaning pipets and sedimentation tubes, as suction tool to draw up spilled liquids. Nickel-plated brass, 5/8" IP male thread and 1/2" female thread at top. Tapered serrated hose connection on side arm and water outlet. Dia serrated tips, 9.5mm. Accommodates 6.4 to 7.9mm rubber tubing. Over-all L, 14cm.

9-956.....Ea/8.00
Pk of 12/86.40

9-992

Glass Filter Pump

With integral check valve. KIMAX® brand. Minimum free air flow, 6.5 liters/min with 2.8kg/cm² of water pressure.

9-992.....Pk of 1/14.57
Case of 4/52.44
(Kimble 38004)

9-965

White Metal Filter Pump

Pumps have air entraining tubes at bottom, which divert course of water from side to side. Made of aluminum and white metal. 9-965B is often permanently installed.

Over-all L	IP Thread Connection	Cat. No.	Ea
18cm	3/8"	9-965A	14.50
33	3/4	9-965B	40.00

9-960-2

Nalgene® Vacuum Pump

Pumping capacity, 11.5 liters/min. Polypropylene vacuum pump operates efficiently with water pressures as low as 0.53kg/cm² for minimum water consumption. Water consumption rate of 6.5 liters/min. Ultimate vacuum: 72cm of Hg. With integral check valve, 3/8" NPT connecting thread, 12cm of tubing.

9-960-2.....Ea/2.92
Case of 24/63.07
(Nalge 6140)

Same as 9-956 Except with 1/4" Male Thread

Same as 9-956 but with nipple having 1/4" male thread.

9-958.....Ea/8.50
Pk of 12/91.50

Accessories for Airejector Aspirators

9-959

Fisher Splashgon® Cylinder

Eliminates splashing for filter pumps. A rubberized cylinder with neck that fits outlet of 9-956 and 9-958 Airejectors. Brass device inside cylinder eliminates entrained air, spreads water stream, decreases water speed to 1/14th of original speed.

9-959.....Ea/2.10
Pk of 12/22.80

9-975B

Pump Couplings

For 9-956, 9-960-2, and 9-965A pumps. Connection for threaded faucets. With female standard bibb connection having 27mm dia and 11 1/2 threads per 25mm. For pumps having 3/8" IP thread.

9-975B.....Ea/2.85

Filter Tubes

9-997

To Draw Off Supernatant from Precipitates

PYREX® brand. Immersion tubes with fritted discs. In two porosities: fine and medium. (Corning 39535)

Flaskette™ Biological Growth Chamber With 8° Tilted Neck

10-126-25

Large 0.9cm opening allows unequalled freedom of manipulation with 5ml pipet. No bulky equipment or large amounts of reagents needed. No spillage; low risk of contamination. Any residue left in neck flows back into chamber.

Typical uses: cloning, plaquing, karyologic studies, fluorescent staining, general cytologic examinations, chemotherapy assay, cytogenetics, tumor culture, autoradiography,

differential staining.

Total volume: 16ml. Suggested working volume: 5ml. Non-toxic, optically clear, sterile. Ready to use in convenient incubator tray. Standard glass slide allows cells to be fixed with acetone once plastic chamber and gasket are removed. With non-toxic, self-sealing cap. Small size, 21Hx25Wx87mmL, saves incubator and workbench space.

10-126-25Pk of 16/15.27 (Lab-Tek 4820) Case of 96/91.65

30ml Culture Flask With Straight Neck

10-126-2B

Special modified polystyrene affords excellent cell attachment, confluency of sheeting. Flat 25cm² growth surface is optically clear, permits distortion-free microscope examination. Neck lies flat when inverted for agar overlay procedures. Capacity: 30ml. Two-piece construction welded by sonic heat for leak-free seam. Neck is wide enough for large pipets. With phenolic screw cap with non-toxic liner.

10-126-2BCase of 500/144.41 (Falcon® 3012)

Culture Flask with Canted Neck and Plug-Sealed Cap

10-126-1

Specially designed polystyrene flask permits distortion-free microscopic examination of cultures. Two-piece construction welded by sonic heat for leak-free seams. Capac, 50ml. Working volume, 10ml. Flat growth area, 25cm². Neck opening slanted at 10° angle accepts standard 5 and 10ml pipets for easy access to all growth areas. 18mm polyethylene screw cap. 20 flasks per sleeve.

10-126-1APk of 100/32.21 (Falcon 3018)

10-126-1BCase of 500/144.41 (Falcon 3013)

250ml Culture Flask

With 75cm² growth surface area. Accepts pipets up to 25ml size. Similar in all other characteristics to 10-126-2B.

10-126-5Case of 100/56.61 (Falcon 3024)

Culture Flasks with Capacities up to 1000ml

Durable polystyrene construction. Canted necks with large inside diameters to increase access to cell growth area. Optically clear surfaces insure distortion-free microscope viewing. Leakproof seams and caps. Special surface treatment provides for optimum cell attachment and growth. Each flask tested for sterility, toxicity, cell growth, and leakage. Easy to stack. With screw caps. (Corning 25100-25120)

Be Prepared

THAT household — indeed, "LABhold" — name in fire extinguishers, Kidde, has brought out a new version of the classic model. Keeps abreast of the latest labeling requirements. Meets specs of OSHA, UL, MTI.

It's a dry chemical extinguisher with 1.2kg (2-5/8 lb) rechargeable cylinder. It now handles three classes of fires: A, B, and C. To use, simply lift handle, direct nozzle at base of flame, press handle. That's that.

10-011-6 19.75

Distillation Flasks, Contd.

PYREX® Brand, 25 to 1000ml

Meet Manufacturing Chemists Association Standards. Round bottoms, vial mouths. 125ml size has its side arm located approx 137mm from bottom of flasks, at 75° angle, to meet ASTM E133, D86, and D447 requirements. All other flasks fit vapor tubes at 75° angles to meet necks 77mm below tops. Adaptable for use with thermometers calibrated for 76mm immersion. (Corning 4620)

Screw-Caps, Contd.

250ml Polycarbonate Flask

Graduated to 250ml. Molded of polycarbonate. Highly resistant to effects of acidity, alkalinity, and heat. Sterile, ready-to-use. Tested for sterility, accuracy, and leakage. With leakproof high-density polyethylene screw caps.
10-041-18Case of 50/30.72 (Corning 25600)

Filtering Flasks

Extra Strong Flasks

Shaped to give maximum mechanical strength. PYREX® brand. Erlenmeyer form with heavy walls, graduated on side. Necks finished with heavy uniform flange. Without tubulations. (Corning 5320)

Capac	Stopper No.	Cat. No.	Pk of	Case of

Class A Volumetric Flasks With Plastic Snap Caps

Storing/Measuring Flasks

KIMAX® brand. These flasks with individual serial numbers are calibrated to contain designated volumes. Carefully selected to meet requirements of NBS Circular 602. Meet requirements of Fed Spec NNN-F-289. Comply with ASTM E288 standards. 500ml size is suitable for determining specific gravity of fine aggregate according to ASTM C128. With 14-644-5 series plastic snap caps. (Kimble 28012)

10-201

Use with Saybolt Viscosimeter

PYREX brand. Class A 60ml flask with constricted neck, calibrated to contain. Rugged mold-blown construction. Graduation mark is held to one-half variation allowed by ASTM standards. ASTM D88; API No. 518; ASA No. Z-11.2; U.S. Bureau of Mines Technical Paper 323B, No. 30.41; AASHO No. T72; *Gas Chemist Handbook*, 3rd edition, p 538.

10-235.....Ea/3.93
Case of 12/42.48
(Corning 5860)

10-235

Volumetric Flask For Sugar Analysis

KIMAX brand. Class A flask without stopper calibrated to contain. Two graduations on neck for dilutions of 1:10. Tolerance of ± 0.08 ml is smaller than allowed on regular flasks. Graduations at 100 and 110ml. For inversion method of sugar analysis.

10-255B.....Pk of 2/11.78
Case of 12/63.60
(Kimble 28105)

10-255B

Class A Kohlrausch Flasks

KIMAX brand. Calibrated to contain. Easy to fill with solids. Adjusted for use at 20°C. Used in analysis of filter press cake. Without stopper. (Kimble 28100)

10-260

Capac	Cat. No.	Pk of 2	Case of 12
100ml	10-260A	13.38	72.24
200	10-260B	14.72	79.44

Class B Bates Flask

PYREX brand. Without stopper, calibrated to contain. With short neck and slightly flared top. Capac, 100ml. For preparing sugar solutions for polarization test. Adopted as standard by U.S. Custom Service, described in NBS Circular 602, *Testing of Glass Volumetric Apparatus*.

Precision Flowmeter

For Air and Water Measurements

11-164-54

Air: 5.5 to 67,000cc/min
Water: 0.06 to 2050cc/min

Ideal kit for measuring wide range of gas and liquid flow rates. Twelve different ranges for air (5.5 to 67,000cc/min). 12 for water (0.06 to 2050cc/min). Just combine the 4 interchangeable glass metering tubes and 6 floats provided in different combinations.

Tubes easily snap in and out of housing. No tools needed. Tubes won't shift under pressure, vacuum, over-range, or backflow.

Fluid (or air) enters bottom of anodized aluminum fitting. Flows

upward past float and out of top fitting. Readings taken directly from 15cm ceramic scale. Accurate to $\pm 5\%$ of maximum scale reading.

Ordering Information: Anodized aluminum unit with plastic safety tube shield. In attractive polyethylene case. With two each $\frac{1}{4}$ " (6.4mm) and $\frac{1}{8}$ " (3.2mm) ID borosilicate glass metering tubes black glass, stainless steel, and Carboly floats. Self-supporting tripod stand; meter body; set of flow curves; hose connectors.

Precision Flowmeters

11-163-50 Flowmeter

Air: 60 to 2860 cc/min

Water: 1 to 81 cc/min

Integral fine control needle valve with Teflon® and threaded glass—full flow with 8 revolutions. Accurate and reproducible meter readings.

Metering tube enclosed in 2 plastic shields, removable for access to metering tube.

Fluid to be metered flows in bottom fitting, upward past float, out the top fitting. Contacts only borosilicate glass and Teflon®. Prevents corrosion and contamination.

Ordering Information: With flowmeter holder, 11-164-80 metering tube, 11-164-90 stainless-steel float, metal base plate, housing, hose connections.

11-163-5090.40

11-164-50 Flowmeter

Air: 1.3 to 23,400 cc/min

Water: 0.017 to 703 cc/min

Versatile flowmeter provided with four snap-in metering tubes (see specs in replacement chart at right). And with six floats (see chart). This assortment permits selection of just the right combination for whatever medium you wish to monitor.

Ordering Information: With snap-on clamps to attach to support frame. Tripod base for table top. Four metering tubes (11-164-76, -78, -80, and -82). Six floats (11-164-84, -86, -88, -90, -92, and -94). And with standard hose connections

11-164-50195.00

Water Flow Indicator

Insert in water lines for an instant check of flow continuity and relative flow rate. Clear plastic. A red ball spins through circular course at speed that increases with velocity of water flow. Tapered inlet and outlet fit rubber tubing 6.4 to 9.5mmID. Over-all length 57mm.

11-164-40Bag of 2/7.00

11-166-2

Removable Back Model

Downtime and costly repairs are no problem. Simply remove back of meter to clean. Housing is cast-aluminum with baked epoxy interior to prevent corrosion. (Exterior is baked silicone enamel.) Rotor and shaft are stainless steel.

Sight glass and manometer protectively placed on front of case; thermometer recessed to avoid breakage and contamination.

Operating range extended to 1.05kg/cm² by removing manometer, plugging port, and inserting pressure gauge.

Connect bell or alarm to binding posts. Provides alert at passage of

set gas volume.

Easy to move and set up. Calibrated against certified Bureau of Standards proving bottle. Conforms to ASTM D1071.

Ordering Information: With sight glass with adjustable water level space setting pointer; U-tube manometer graduated to read from 0 to 6" (15.2cm) water pressure; thermometer; spirit level; leveling feet; carry handle; drain-cock and plug; filling plug; serrated hose connector.

In cubic foot and liter models. Specifications listed.

Measure gas flow to within ½% of total volume. It's **the** tool when you wish to admit a carefully controlled volume of gas into a reaction . . . or to precisely control a gas stream for applications in nuclear or agricultural research. Calibration of chromatographic columns. Electronic components. Calorimetry.

Ratio of water displaced to gas volume moved is the principle applied to achieve the accuracy, i.e., in the cu ft model, 1/10 cu ft of water is displaced for each 10 cu ft of gas (±.5%) passing through the meter.

Two basic models: (1) Removable Back, and (2) Stainless Steel. Each model is available in two types: (1) Cu Ft and (2) Liter (see specs in table).

11-166-5

Stainless-Steel Model

Rotor, shaft, and housing are stainless steel, with metallic aluminum paint on exterior of housing. Connect bell or alarm to binding posts. Provides alert at passage of set gas volume.

Calibrated against NBS standard bottle. Conforms to ASTM D1071.

Ordering Information

Cubic Foot Model with bull's-eye spirit level, armored thermometer,

glass water level indicator with adjustable manometer, filling funnel with drain cock, serrated inlet and outlet, drain plug and base with 2 leveling screws. Same specs as 11-166-2.

Turner Fluorometers . . . Concentrations to 1.5 parts per 100 billion of quinine sulfate

Optical bridge design for maximum stability. Filter fluorometers measure ratio of intensity of fluorescent light emitted from sample and that of known portion from light source. Same light source and photodetector in both light paths, so variables such as line voltage and drift are automatically compensated.

To operate: Select optical filter for proper wavelength. Zero instrument (only at start of each series; not each sample). Place sample cuvet in holder on door. Closing door places sample in optical path. Balance optical bridge (Model 111 is automatic; Model 110, manual). Read fluorescence value from dial. Determine concentration from standard curve.

Range: about 2ppb quinine sulfate gives full scale deflection on most sensitive range. Range selector for: 1, 3, 10, and 30X sensitivity. Neutral density filters give further expansion. Readings linear to $\pm 1\%$; readable to 0.5%.

Built-in filter holders accept any combination of standard 5x5cm filters up to 9.5mm thick. Sample holders mounted on accessory sample doors. Cabinet reinforced extra-heavy steel. Critical components precision-machined aluminum. Exterior painted surfaces solvent- and scratch-resistant.

Manual Model 110

Optical bridge balanced by manually turning dial. Cannot be modified to operate recorders.

Ordering Information: With 7-118-66 standard cuvet door; five 7-118-22 matched cuvet; primary filter with peak at 360nm; secondary filter that passes wavelengths longer than 415nm; dummy cuvet; dust cover; 2 general purpose lamps; instructions; *Manual of Clinical Procedures*; line cord with plug. Size: 31Lx27Wx32cmH. For 115V 50/60Hz. Wt, 19kg (42 lb).

7-1181345.00

Automatic Model 111

Optical Bridge automatically balanced by servo-mechanism. Recorder (0-1 milliamp or 0-10mV) can be attached.

Ordering Information: With all equipment listed for 7-118 except 7-118-66 standard cuvet door and 7-118-22 matched cuvet. Order appropriate door separately. Size: 31Lx30Wx33cmH. For 115V 50/60Hz. Wt, 21kg (46 lb).

7-118-51895.00

7-118

Instantly Interchangeable Fluorometer Attachments

Standard Cuvet Door

Suitable for most routine work. Holds round cuvet 13x100mm; 12x75mm; 10x75mm; and square 10x75mm. With dummy cuvet

7-118-6688.50

High Sensitivity Sample Holder

Increases sensitivity by 10X. Replaces cuvet holder portion of 7-118-66 standard cuvet door. Holds round cuvet 13x100mm; 12x75mm; 6x50mm. With instructions, dummy cuvet, cuvet selection notes

7-118-7487.50

Temperature Stabilized Door

Provides for circulating water bath . . . maintains sample temperature within 1°C. Water-cooled aluminum block surrounds cuvet (except for PYREX® brand windows to transmit light). Accommodates round cuvet 12x75mm; 10x75mm; 6x50mm. Also increases instrument sensitivity 6 to 10X. Cannot be used with wavelengths shorter than 315nm. With instructions; blanking cuvet and necessary cuvet inserts. Without circulating bath.

7-118-100254.50

Automated Chemistry Adapter

Allows connecting a 7-118-5 Model 111 Fluorometer to a Technicon Auto Analyzer® System for fluorescence procedures. With recorder coupling and spare debubbler-flow cell.

Spectrofluorometers.
See 7-117 (p 1072).

Accessories for Turner Fluorometers

Cuvets

For general use on all but most sensitive ranges. Round; 12x75mm. Borosilicate glass.

7-118-20Pk of 12/7.20

For 30X instrument range. Round; 12x75mm. Matched; borosilicate glass.

7-118-22Set of 5/13.95

For wavelengths shorter than 315nm. Round; 11x75mm. Spectrosil® grade quartz.

7-118-2450.50

For nephelometry. Square; 10x10x75mm. Borosilicate glass.

7-118-2616.95

Filters

Far UV Filters for excitation of samples at 254nm. Transmits from 254 to 420nm. Use 7-118-64 Far UV Lamp and 7-118-24 Quartz Cells.

7-118-3022.50

Near UV Absorbing Filter is special plastic filter to fit over 7-118-30 Far UV Filter. Combination transmits 254nm, but not over 300nm. Stability limited; change filter after several hundred determinations.

7-118-35Pk of 5/18.80

Deluxe Filter Set includes: 5 narrow pass filters; peak at 405, 436, 460, 495, 525nm.

9 sharp cut filters; pass wavelengths longer than 455, 465, 485, 510, 520, 535, 560, 595, 570nm.

Special range filters for 1X range extension. Set of 17 in hinged hardwood box.

7-118-51217.00

Lamps

General Purpose Lamp for all Fluorometer applications except Far UV excitation (254nm). Two supplied with each instrument.

7-118-6216.85

Far Ultraviolet Lamp for excitation at 254nm and other mercury emission lines.

7-118-6420.40

Forceps

Pinning Forceps

Pin zoological specimens easily when space is limited, with pinning forceps. Points are bent and blunt with serrated inside surface to hold objects tightly. Handles are grooved for better grip. Chromium-plated steel resists corrosion. 115mmL. FISHERbrand®.

10-270Ea/2.00
Pk of 10/18.00

Curved Forceps

Heavy-duty type for general lab work. Inside points are file-cut for good holding. Made of non-rusting, non-corroding Monel metal. 150mmL. FISHERbrand.

10-275Ea/3.00
Case of 12/32.25

Blunt Point Forceps

Blunt-point, straight forceps are chromium-plated with serrated points. 105mmL. FISHERbrand.

8-895Ea/.75
Pk of 10/6.75

Cadmium-Plated Forceps

Handle phosphorus, potassium, etc, safely with cadmium-plated steel forceps. Straight type. Rustproof and durable. Priced low for student use. 125mmL.

10-280Pk of 10/4.75

Platinum-Tip Forceps

Forceps won't contaminate objects. Tips are heavy platinum (1.8g), riveted to stainless steel. Straight type forceps with grooved handles for good gripping. 140mmL. Price varies with platinum market.

10-285Price upon request

Sharp-Pointed Forceps

Handle tissue easily with sharp-pointed forceps. Chromium-plated forged steel construction to resist rust and corrosion. With grooved handles for a non-slip grip. 125mmL. FISHERbrand.

10-277Ea/2.90
Pk of 10/26.10

General Purpose Forceps with Choice of Tips

Curved, sharp-pointed forceps are highly polished, chromium-plated steel to resist rust and corrosion. Points are serrated for gripping small objects tightly. With grooved handles. 115mmL. FISHERbrand®.

8-875Ea/1.50
Pk of 10/10.50

Straight forceps with sharp points. Similar to 8-875. 115mmL. FISHERbrand.

8-880Ea/1.50
Pk of 10/10.50

Forceps slightly heavier than 8-875. Points are curved but less sharp. Chromium-plated steel. 115mmL. FISHERbrand.

8-882Ea/1.50
Pk of 10/10.50

Forceps

General Forceps Contd.

Straight Model of 8-882 forceps. With medium points. Chromium-plated. FISHERbrand.
8-885.....Ea/1.50
Pk of 10/10.50

Heaviest version of 8-875 forceps, with very blunt, rounded, curved points. Chromium-plated steel. 125mmL. FISHERbrand.
8-887.....Ea/1.50
Pk of 10/10.50

Straight-point version of 8-887. Chromium-plated, 115mm length. FISHERbrand.
8-890.....Ea/1.50
Pk of 10/12.00

Forceps for Cover Glasses

Immerse cover glasses in preparation dish with chromium-plated steel forceps. Broad, thin tips are bent at correct angle for this application. Handles are grooved for good gripping, 110mmL. FISHERbrand.
10-295.....Ea/1.50
Pk of 10/10.50

Pick up cover glasses with these forceps. Tips are broad, straight, and thin. Forceps are highly polished, chromium-plated steel with grooved handles. 100mmL. FISHERbrand.
10-300.....Ea/1.35
Pk of 10/8.95

Forceps hold cover glass with self-closing action. Tips are curved inward allowing only a small area to touch glass. Handles are broad and support forceps without contaminating glass when placed on table. Made of chromium-plated steel, 120mmL. FISHERbrand
10-305.....Ea/2.25
Pk of 10/20.25

Forceps for Microscope Slides

Hold microscope slides, stain won't run off. Self-closing forceps lie flat on table and support slide horizontally. Can also be hung from jars and tubes to immerse slide. Hold test tubes from 13mm to 19mm dia. Made from nickel-plated, spring-steel wire, 130mmL. Mood design.
10-3122.75

Extra Long Forceps

Remove specimens from deep bottles or jars with long forceps. Tips are rounded and serrated to grip specimens well. Handles are grooved. Highly polished, chromium-plated steel. FISHERbrand.

L	Cat. No.	Ea	Pk of 10
200mm	10-316A	4.00	36.00
250	10-316B	6.00	54.00
300	10-316C	8.50	76.50

Triceps Pick Up Small Objects

Handle cover glasses and thin substrates to 38mm dia very easily with stainless-steel triceps. Three prongs have hooks, spring steel fingers which extend from instrument when plunger is pushed. Retracting force of prongs holds glasses automatically. Instrument permits complete view of object held at all times. Can be sterilized. Measures 11cmL with prongs retracted. With handy, integral pocket clip.
10-317A8.75

Handle cover glasses in limited space. This tricep has a 5cm elongated tip. Otherwise it's similar to 10-317A. Measures 16.5cmL.
10-317B13.50

Polypropylene Scissor-Type Forceps

Retrieve objects from acid baths and other corrosive media with lightweight, durable, polypropylene forceps. Instrument resists deterioration by strong acids and bases. Gentler on living tissue than metal forceps. Serrated teeth hold paper, rods, or any small objects firmly, and can be locked onto object by using ratchet at end of handle. Plus, there's special place on jaws for clamping flexible tubing.
Clamping is effected through an ingenious cantilever hinge arrangement by applying pressure to the handy scissor-type grip. Hinges are molded into forceps, won't stick or loosen with use. Last through thousands of applications. Forceps can be sterilized by autoclave methods (to 135°C) or by using ethylene oxide. Priced to be disposable
10-309Pk of 12/6.54
(Nalge 6320) Case of 72/35.32

Dissecting Forceps

Artery, self-closing. Chrome-plated steel forceps with inside of points very finely filecut. Corrugated handle to ensure firm grip. Blunt and rounded points slightly curved.

8-905.....Ea/3.00
Pk of 10/27.00

Reverse action. Stainless-steel. Sharp points normally tight together . . . stand apart with finger pressure. Grip securely without finger pressure.

8-906.....Ea/2.90
Pk of 10/26.10

Kelly hemostatic. Stainless steel. Screw joints. Straight serrated point. Scissor-type handles. Multiple ratchet lock. L, 140mm. FISHERbrand.

8-907.....Ea/8.30
Case of 12/89.60

Narrow tapered points. Forceps are chrome-plated without corrugated handles. Straight type with medium points. L, 115mm. FISHERbrand.

8-900.....Ea/1.15
Pk of 10/10.50

Sharp-point, straight forceps. Without corrugated handle. Chrome-plated steel. L, 105mm. FISHERbrand.

Balance Weight Forceps. See 2-354, page 53

Fisher Scientific Company

Labconco Freeze-Dry Apparatus

Labconco Freeze-Dry Apparatus

Preserves living cells, biological specimens, whole blood, vaccines . . . inexpensively

Lyophilization is the most practical (and inexpensive) way to preserve living cells, whole blood, vaccines, biological specimens. Samples are frozen first and then subject to vacuum and controlled heat until all water is removed. No refrigeration necessary. Samples keep perfectly, stored on a shelf. Just add water to reconstitute.

Three Labconco freeze dryers are available from Fisher. All are easy to operate, maintain, defrost, and drain. Primary difference is loading capacity. **Freeze Dryer-12 has 12-liter ice holding capacity in its condenser section; Freeze Dryer-5, capacity of 5 liters; Freeze Dryer-3, capacity of 3 liters. Actual specimen capacity**

of each freeze dryer is 1/3 of its ice holding capacity. For example: Freeze Dryer-12 holds 4 liters (4000ml) of specimens at one time.

Many operator benefits. Hand-some bench-high cabinets, accessible components, melamine work surfaces. High-capacity refrigeration systems matched to conden-

sers to provide maximum efficiency. Wide variety of freeze drying accessories are also available. Drying chambers, manifolds, shell freezers, tray freezers, temperature controllers, vacuum indicators, and glassware. (See accessories on pages 359 through 363.)

Freeze Dryer-12

Complete lyophilization lab

Basic unit for complete, versatile lyophilization lab. Add accessories to handle virtually any freeze drying application.

Extra-large stainless-steel condenser with 12-liter ice holding capacity. Refrigerant coils bonded to outer surface of condenser. Heavily insulated with Freon-filled urethane foam. Water vapor freezes directly on coils. Fluorescent lamp illuminates condenser interior for easy observation of ice build-up.

Automatic defroster in condenser eliminates ice build-up. Embedded electric heater bonded to condenser drum supplies heat directly to walls. Quickly breaks bond between ice and condenser wall. Ice can be pulled off or left to melt and drain.

High capacity 1/2hp refrigeration system built into cabinet. Matched to condenser ice holding capacity to provide maximum efficiency. Cools condenser to -54°C.

Two-stage gas ballast high vacuum pump removes non-condensable gases (principally air) from drying chamber. Air displacement capacity, 160 liters/min. Rated pressure, 0.1 micron. Ultimate system pressure, 5 microns. Pump and motor mounted on rubber vibration absorbers. With mounted oil drain and easy-to-read oil level sight glass.

Integral deep shell freezer for pre-freezing samples has transparent cover and adjustable rollers. Accommodates two 2000ml flasks or four 1200ml flasks or 9-liter serum bottle. (See 10-269-6, page 358, for details.)

All controls on front panel. McLeod vacuum gauge with range of 5×10^{-3} to 5 Torr. Condenser temperature indicator calibrated in degrees C and degrees F. Illuminated switches for refrigeration system, vacuum pump, and defroster.

Ordering Information

Freeze Dryer-12. Mobile bench-high lyophilization station with integral shell freezer. Blue and white epoxy-coated steel cabinet with 4 casters and 2 vertically hinged front doors. Easy-to-clean white melamine work surface. Left front door with smoked acrylic condenser viewing panel and magnetic latch. Top of condenser with 7.6cm opening for quick connection to drying chambers. All compo-

nents are easily accessible. Cabinet dimensions, 76Lx119Wx94cmH. Without mercury or other accessories.

10-269

Freeze Dryer-5

For moderate-scale lab use

Compatible with variety of accessories for simple and efficient manifold, bulk, or tray freeze drying.

Stainless-steel condenser ice holding capacity, 5 liters. Water vapor freezes directly onto stainless-steel refrigerant coils within condenser. To defrost, just lift off drying chamber and condenser acrylic top at conclusion of lyophilization. Pour hot water over coils.

High capacity 1/3hp refrigeration system built into cabinet. Cools condenser to -54°C .

Fingertip controls. McLeod gauge with range of 5×10^{-3} to 5 Torr. Condenser temperature indicated on thermocouple gauge in

degrees C or degrees F. Illuminated switches for condenser refrigeration system and vacuum pump.

Ordering Information: With attractive blue and white epoxy-coated steel cabinet with 4 casters. White melamine work surface. Left front door opens for front access to condenser drain and vacuum pump. Stainless-steel condenser with acrylic top having 7.6cm opening for quick connection to drying chamber. Cabinet dimensions, 61Lx76Wx94cmH. Without vacuum pump, mercury for McLeod vacuum gauge, shell freezer, or other accessories. 115V 60Hz.

10-269-41500.00
(Labconco 75050)

Freeze Dryer-3

Budget-priced unit

Stainless-steel condenser ice-holding capacity, 3 liters. Condenser mounted in drying chamber on top of unit. Covered with clear acrylic top to permit full viewing during operation. Water vapor freezes directly on coils. To defrost, remove condenser top and pour hot water over coils.

High capacity 1/3hp Freon refrigeration system built into cabinet. Cools condenser to -50°C .

Attractive front control panel. Easy-to-read condenser temperature indicator. On/off switches for refrigeration system and vacuum pump. With panel for mounting McLeod gauge.

Ordering Information

Freeze Dryer-3 with mobile bench-high steel cabinet with blue and white epoxy-coated panels. Easy-to-clean white melamine work surface. Left front door opens for front access to condenser drain and vacuum pump. With 12-port stainless-steel drying chamber with eight 13mm valves and four 19mm valves. Without vacuum pump, McLeod gauge, shell freezer, or other accessories. Cabinet dimensions, 61Lx76Wx94cmH. 115V 60Hz.

10-269-51195.00
(Labconco 75200)

Accessories must be ordered separately. See following listing.

10-269-4

10-269-5

Accessories for Labconco Freeze Dryers

10-269-13

Drying Chambers

Type 304 stainless-steel construction. Weld-free for dependable vacuum operation. With clear acrylic top for complete visibility during bulk drying. For use on Freeze Dryer-12 and Freeze Dryer-5. (Labconco 75100 through 75106)

No. Ports	No. 1/2" (13mm) Valves	No. 3/4" (19mm) Valves	Dia	Cat. No.	Ea

39	39	----	38	10-269-15	645.00

Snap-In Valves

Connect Containers to Drying Chamber

Just snap valves into drying chamber ports for leak-proof high vacuum seals. Eliminates leaks due to defective welds or corrosion. Full 360° rotation of valve during operation without loss of vacuum.

10-269-94

10-269-95

"Vent" and "Vac" positions clearly marked on selector knob. In "Vac" position, freeze dry containers directly connected to vacuum system. In "Vent" position, container disconnected from vacuum system and automatically connected to vent port which gently bleeds air into chamber to release vacuum.

Vent port accommodates polypropylene or glass drying tubes for filling containers with sterile dry air or dry nitrogen. For combination bulk and manifold drying chambers, remove one or more valves to provide access ports for electronic temperature indicators, controllers, or recorders.

Ordering Information: Buna-N rubber valve body with molded polypropylene stems. Fits freeze drying flasks, ampules, serum bottles. (Labconco 75900 and 75910)

Size	Cat. No.	Ea
13mm	10-269-94	11.00
19	10-269-95	12.00

Manifolds

24-Port Manifold. For use on Freeze Dryer-12, Freeze Dryer-5, Freeze Dryer-3, and Vac-Stop™ Tray Dryer. Stainless-steel construction. Front loading. 15Lx48Wx23cmH. With twenty-four 13mm valves and base gaskets. 10-269-16425.00 (Labconco 75180)

48-Port Manifold. For use on all Freeze Dryer-12 and Freeze Dryer-5 models. Front loading for maximum operating convenience. Stainless-steel construction. 41Lx99Wx61cmH. With 2 adjustable support trays and forty-eight 13mm valves. 10-269-171180.00 (Labconco 75120)

10-269-9

Shell Freezer

Important stand-alone accessory prepares samples for freeze-drying in Freeze Dry Models 12, 5, and 3. Because unit rotates samples during processing, sample freezes over the entire inner surface area of the flask in a shell-like formation. Thus when freeze-dried, a larger surface area of frozen sample is exposed to vacuum. Promotes much faster freeze-drying than if one sample were a frozen mass.

Accommodates contents of two 2000ml flasks or four 1200ml flasks—even a 9-liter serum bottle. Fast-Freeze™ and Lyph-Lok™ Flasks (see Glassware on page 362) are placed in horizontal position in bath. Other type flasks are suspended from metal supports for correct angle of rotation in bath.

High capacity 1/2hp freon refrigeration system built into cabinet. Cools bath solvent to below -40°C. Seal-less magnetic drive

pump continually recirculates solvent to ensure even temperatures throughout bath.

Front controls. Dial temperature thermometer gives continuous indication of bath temperature. Illuminated on/off switch for refrigeration system and roller mechanism.

Stainless-steel freezer compartment heavily insulated with freon-filled urethane. All internal components easily removed for cleaning and for use as deep freezer for stub or slant sample freezing. With clear PVC cover. 51Lx25Wx27 cmD.

Ordering Information: Portable bench-high cabinet with casters. Blue and white epoxy-coated. With white melamine work top. Front panel lifts off for easy access to solvent drain. Cabinet: 76Lx61Wx94cmH. 115V 60Hz. 10-269-91695.00 (Labconco 75250)

Bulk Drying Chamber

Mounts on Freeze Dryer-3 for bulk drying. With acrylic top, 3-shelf product heater, 24V transformer.

10-269-20515.00
(Labconco 75210)

10-269-29

Rubber Tubing Clamp

Useful for leak detection work. Seals heavy-wall vacuum tubing up to 19mm ID.

10-269-2926.00
(Labconco 75790)

10-269-7

Vac-Stop™ Tray Dryer

Plugs into either the Model-12 or -5 Freeze Dryer to provide greater capacity. Appropriate for larger numbers of small flasks than can be attached to the basic instrument. Or for bulk freeze-drying of materials on a tray. Unit handles up to 2 liters of material on two shelves. For even greater capacity, the 24-port manifold can be mounted on top of Vac-Stop Tray Dryer (see above description).

A high capacity 1/3hp refrigeration system is built into cabinet to cool both shelves to -40°C . Thus the unit can also be used for pre-freezing of samples.

Complete interior of unit can be evacuated for freeze drying. A special stoppering device on the lower shelf permits serum bottles to be sealed under original vacuum after the freeze drying operation.

Unit accommodates Petri dishes, beakers, test tubes, or 5 to 100ml serum bottles.

Convenient front control panel. Shelf or product temperature continuously indicated on electronic digital display in degrees C or in degrees F. With probe selector knob, Fahrenheit converter switch, three-position switch for shelf refrigeration and heating, separate automatic temperature controllers for upper and lower shelf.

Vacuum release valve mounted on side of cabinet. Provides controlled release of vacuum. Air entry port may be used for sterile air or dry nitrogen back filling of chamber.

Ordering Information: Heavy wall, fiberglass-reinforced polyester chamber with clear acrylic door. With 2 process shelves, 2 temperature probes, and 7.6cm vapor outlet. Cabinet dimensions: 60Lx66Wx46cmH. 115V 60Hz

10-269-73950.00
(Labconco 75150)

Freeze Dry Accessories

10-269-50

Fast-Freeze™ Flasks Load Faster and Easier

Ideal containers for holding samples while freeze drying. Wide openings. Flat bottoms. Marked with convenient volumetric scale. Silicone rubber snap-on tops provide reliable high vacuum seals — no threads, springs, hooks, or grease. Borosilicate glass. In 7 sizes.

Indicators and Controllers

Electronic Vacuum Indicator

Monitors vacuum for all Labconco Freeze Dry Vacuum Systems. Range: 1×10^{-3} to 5 Torr. Connect to vacuum tubing or valve in same manner as McLeod gauge. With solid-state circuitry, internal voltage regulator, matched thermopile transducer. Blue epoxy-coated case. 25Lx16Wx21cmH. 115V 50/60Hz.
 10-269-23.....450.00
 (Labconco 75800)

Temperature Indicator

For use with all drying chambers. Digital display shows probe temperature in degrees C or at push of button converts reading to degrees F. Range: 100 to +100°C. With non-porous RTD temperature sensing probe, mini-plugs, and output jack for 10-269-26 temperature recorder. Blue epoxy-coated case. 25Lx17Wx21cmH. 115V 50/60Hz.
 10-269-24.....450.00
 (Labconco 75810)

Temperature Controller

For use with 10-269-18 and 10-269-19 three-shelf product heaters. Digital display shows probe temperature in degrees C. Push button to convert reading to degrees F. Range: -100° to +100°C. Depress "Push to Set" button for controller set temperature to appear on digital display. With non-porous RTD probe and mini-plug. Blue epoxy-coated case. 25Lx17Wx21cmH. 115V 50/60Hz.
 10-269-25.....450.00
 (Labconco 75820)

Temperature Recorder

For use with Vac-Stop™ Tray Dryer, 10-269-25 temperature controller, or 10-269-24 temperature indicator. Inkless stylus records on pressure sensitive paper. Records every 2 sec. Range: -100° to +100°C. Chart advance thumbwheel, access window door release latch. Aluminum case. 15Lx9.2Wx1.6cmH. With 19m roll of 6.5cm wide chart paper. 115V 60Hz.
 10-269-26.....450.00
 (Labconco 75830)

Revco Ultra-Low Temperature Freezers and Accessories

Chest . . . upright and plasma models

Revco freezers feature unique heat transfer cooling system which lowers temperature faster, more efficiently. Assures even temperature. No liquid coolant required so cabinet stays dry and free of rust. Hermetically-sealed, low-amperage compressors minimize heat build-up.

Cabinets made of a combination of heavy-gauge steels bonderized with zinc phosphate coating which forms a corrosion-resistant barrier. Finished with baked acrylic enamel. Insulation is high density fiberglass and polyurethane foam with integrated overlap system to eliminate voids.

13-990-12

Chest Models

Feature indicator-controller with adjustments in 5° increments, $\pm 2\frac{1}{2}^\circ$ cycle at cycling temperature. Storage chamber lined with thermal mastic compound to reduce rate of warm-up in case of power failure. Improves temperature uniformity during normal operation. Beaded foam sublids also help maintain storage temperatures, reduce frost accumulation and operation cost. Spring tension hinge holds lids open to 75° position.

13-990-24

Upright Models

13-990-27 has 4 compartments with 3 refrigerated shelves. No. 13-990-24 has 6 compartments with 5 shelves — 4 refrigerated and one removable for bulk storage.

Inventory Control Systems for Revco Ultra-Low-Temperature Freezers

Excellent for organizing and keeping track of specimen vials in storage. Systems designed to fit directly into Revco freezers.

They consist of (1) stainless-steel racks (full racks with 5 to 12 shelves each or half-racks with 3 shelves each); (2) waterproof cardboard containers (5 or 7.6cm deep) that fit directly into shelves; (3) cardboard dividers that compartmentalize each container into 49 or 100 cells.

Racks for chest freezers are vertical (the height of freezer chamber), designed for side-by-side placement. Containers are stacked top to bottom in each rack. To remove a bottom container, for instance, just pull its rack straight up out of freezer. No need to move adjacent racks.

Each system described below is supplied complete with the necessary racks, shelves, and boxes.

Upright freezer with inventory control system.

Two full racks and one half-rack using 5cm deep containers.

For 255-liter chest freezers

17,100 vial capacity. 16 racks with 9 boxes plus 9 half-racks with 3 boxes. Each box holds 100 storage cells.

13-990-51A745.00
(Revco 9-2-1/2-CB)

8379 vial capacity. Same as 13-990-51A except each box has 49 storage cells.

13-990-51B745.00
(Revco 9-2-5/8-CB)

11,700 vial capacity. 16 racks with 6 boxes plus 7 half-racks with 3 boxes. Each box holds 100 storage cells.

13-990-51C595.00
(Revco 9-3-1/2-CB)

5733 vial capacity. Same as 13-990-51C except each box has 49 storage cells.

13-990-51D595.00
(Revco 9-3-5/8-CB)

For 349-liter chest freezers

27,000 vial capacity. 27 racks with 10 boxes. Each box holds 100 storage cells.

13-990-52A999.00
(Revco 12-2-1/2-CB)

13,230 vial capacity. Same as 13-990-52A except each box has 49 storage cells.

13-990-52B950.00
(Revco 12-2-5/8-CB)

16,200 vial capacity. 27 racks with 6 boxes. Each box holds 100 storage cells.

13-990-52C815.00
(Revco 12-3-1/2-CB)

7938 vial capacity. Same as 13-990-52C except each box has 49 storage cells.

13-990-52D815.00
(Revco 12-3-5/8-CB)

For 476-liter chest freezers

35,200 vial capacity. 33 racks with 11 boxes. Each box holds 100 storage cells.

13-990-53A1280.00
(Revco 17-2-1/2-CB)

17,248 vial capacity. Same as 13-990-53A except each box has 49 storage cells.

13-990-53B1280.00
(Revco 17-2-5/8-CB)

22,400 vial capacity. 33 racks with 7 boxes. Each box holds 100 storage cells.

13-990-53C1105.00
(Revco 17-3-1/2-CB)

10,976 vial capacity. Same as 13-990-53C except each box has 49 storage cells.

13-990-53D1105.00
(Revco 17-3-5/8-CB)

For 309-liter upright freezers

Each upright freezer accommodates one full set as described below.

14,400 vial capacity. With 12 stacks. Each stack has 4 drawers with 3 boxes, each with 100 storage cells.

13-990-54A1020.00
(Revco 11-2-1/2-CB)

7,056 vial capacity. Same as 13-990-54A except each box has 49 storage cells.

13-990-54B1020.00
(Revco 11-2-5/8-CB)

10,800 vial capacity. With 12 stacks. Each stack has 3 drawers with 3 boxes, each with 100 storage cells.

13-990-54C1020.00
(Revco 11-3-1/2-CB)

5,292 vial capacity. Same as 13-990-54C except each box has 49 storage cells.

13-990-54D1020.00
(Revco 11-3-5/8-CB)

Container with 49 cells.

Three full racks with 5cm deep containers.

Self-Defrosting Freezer

0.80m³ capacity

Two-door unit with forced air circulation. 6 adjustable shelves. Operates at -17.8°C .

Front, top interior, and sides are stainless steel. Bottom and back are galvanized iron. Expanded polystyrene insulation. $\frac{1}{2}$ hp compressor. Exterior: 76Lx122Wx183cmH. 115V 60Hz. Shp wt 295kg (650 lb).

13-987-83672.00

Undercounter Freezer/Refrigerator

Compact units for
Contempra™ furniture groupings
0.19m³ capacity

All-Freezer Unit

Doors don't interfere with neighboring base units. Can be mounted to open from left or right. Doors have full perimeter magnetic gasket for firm, effective seal. Fingertip grip eliminates protruding handle.

Exterior, steel with white enamel finish. Interior, one-piece corrosion-proof polystyrene with no recesses to trap spilled materials. Thin-wall polyurethane insulation.

Sealed $\frac{1}{2}$ hp compressor mounted in base with intake-exhaust through front grill. Compressor warranted for 5 years. Temperature range: -18° to -90°C . Does not self-defrost.

Ordering Information: Freezer unit with one removable shelf (adjustable to 3 positions). 0.19m³ capac. 55Lx61Wx88cmH. Shp wt, 54kg (120 lb). 115V 60Hz. UL approved.

Fisher Filtrator® Funnel For Vacuums from 30 to 60cm Hg

Double-walled glazed porcelain funnel with 60° slitted inner cone and smooth outer cone. Filters at reduced pressure in 1/2 to 1/3 time required by gravity filtering.

Connect funnel to Fisher Filtrator or suitable filtering flask. Fold 11cm filter paper, place in inner cone. Pour solution to be filtered into cone. As vacuum is established, filtrate is carried through paper, to slitted inner cone, and down stem. Precipitate adheres to filter paper.

Fisher Scientific Company

With Patented Double Vents

Mooney air vent funnels. Allow air to escape. Heavy-molded funnels with smooth rims, inside ribs, double air vents on stems. Air vents consist of two deep grooves extending up stem of funnel. Vents end around funnel bowl in heavy glass ring which supports funnel when placed in container. Vents allow air from receiving container to escape as liquid is added. Liquid flow is not inhibited.

20-700-10

Funnel Support

Fits funnels 75 to 150mm dia

Fisher Funelaire™ is a solid rubber device that holds funnel upright in neck of bottle or flask and provides air vents for fast filling jobs. Designed from suggestion of Dan Grell when at Sterling Chemistry Laboratory, Yale University.

Conical center which flares at 60° angle fits and grips bottom of funnel bowl snugly. Ridges at bottom of Funelaire form vents through which air freely escapes while bottle is being filled.

Used to fill reagent bottles without splattering. Fits stems of funnels with 75 to 150mm dia.

10-331Pk of 12/7.05

Glass Stopped

Transparent FEP
Assemblies

Nalgene®. Teflon® FEP funnels with Teflon® TFE plugs and Tefzel ETFE screw closures. Useful in radiological and hazardous separations. So transparent, phase interface of even colorless liquids can be clearly seen down to stopcock housing. Unbreakable, inert to any chemical. Funnel can be repeatedly autoclaved or chemically sterilized. No stopcock lubrication needed. Stem L, 65mm. (Nalge 4301)

Complete Island Assembly From the Fisher Contempra Collection

See p 405 for details

Fisher Isotemp® Muffle Furnaces

Reduced heat-up time and power consumption

In 3 chamber sizes

Fisher Isotemp® Muffle Furnace Models 182, 184, and 186 are a series of ultra-lightweight, economical, laboratory muffle or box furnaces. With reduced heat-up time and power consumption. Heat to maximum operating temperature 1100°C in less than 15min. Also have rapid cool-down and recovery times.

Heat-up time of 15 min compares with 120min for equivalent brick furnaces. Overall power consumption is about half. Only about 1/10 the power is necessary for heat-up.

Helically wound, Kanthal wire heating elements are non-inductive and embedded within an inorganic refractory fiber insulating body. Embedded heating elements protect from electrical shock. Low power density of heating elements assures long life. Platinel® II thermocouple also gives extra long life.

Furnaces can be used to fire and anneal glass, ferrous and non-ferrous metals, and ceramic specimens. Perform solid-state inorganic reactions. Ash organic samples. Desiccate samples. Fuse rocks and minerals. Harden, temper, and heat-treat materials.

Furnace controls are front-mounted for easy access and reading. A variable adjust, single-turn, bimetallic Temperature Controller has separate functions for OFF, LO, and HI for adjusting and controlling furnace temperature as well as turning power on and off. Set point accuracy: $\pm 15^{\circ}\text{C}$. Temperature Controller automatically compensates for line voltage fluctuations of $\pm 12\text{V AC}$ and ambient temperature changes.

Dual indicator lights next to controller monitor power to the controller (white light) and heat to the furnace (red light).

An indicating pyrometer measures temperature selected with the Temperature Controller. Dial is calibrated in 10° increments from 0° to 1100°C (32° to 2012°F). Accuracy: $\pm 2\%$ of full scale. Furnace can be operated at temperatures below 400°C by rotating the control knob to a setting between OFF and LO.

Bench top unit, lightweight for easy portability. Door, hinged on bottom of furnace, opens to provide utility platform. Ventilated base prevents damage to bench and tabletops. Welded steel cabinet with baked-on enamel finish: citron gray with charcoal black trim and control panel. An instruction manual is included. Exterior dimensions: 36Lx43W x48cmH. Wt: 16kg.

Isotemp® Muffle Furnaces

184	10x13x25	120 50/60	10-550-184	375.00
184	10x13x25	240 50/60	10-550-185	375.00
186	23x23x36	240 50/60	10-550-186	795.00

Fisher Isotemp[®] Tube Furnaces

Ultra lightweight . . . economical

Hinged, 25 or 51mm split tubes

Fisher Isotemp[®] Tube Furnace Models 187 and 189 are ultra-lightweight, economical, single zone, hinged, split tube laboratory furnaces. Choice of 305x25mm or 305x51mm heating chamber. Vestibules located at each end of heating chamber decrease heat loss and give greater temperature uniformity.

Rapid heat-up and recovery times and low power consumption. Heat to maximum operating temperature of 1000°C in less than 15min compared to 120min for equivalent brick furnaces. Over-all power consumption is half that of equivalent brick furnace and only about 1/10 the power is necessary for heat-up of these Isotemp furnaces.

Helically wound, Kanthal wire heating elements are non-inductive and embedded within an inorganic refractory fiber insulating body. Embedded heating elements protect from electrical shock. Low power density of heating elements assures long life. Platinel[®] II thermocouple also gives extra long life.

Ovens can be used to fire and anneal glass, ferrous, and non-ferrous metals, and ceramic specimens perform solid-state inorganic

reactions. Ash organic samples. Desiccate samples. Fuse rocks and minerals. Harden, temper and heat-treat materials.

Furnace controls are front-mounted for easy access and reading. A variable adjust, single-turn, bimetallic Temperature Controller has separate functions for OFF, LO, and HI for adjusting and controlling furnace temperature as well as turning power on and off. Set point accuracy: $\pm 15^{\circ}\text{C}$. Temperature Controller automatically compensates for line voltage fluctuations of $\pm 12\text{V AC}$ and ambient temperature changes.

Dual indicator lights next to controller monitor power to the controller (white light)

and heat to the furnace (red light).

An indicating pyrometer measures temperature selected with the Temperature Controller. Dial is calibrated in 10° increments from 0° to 1000°C (32° to 1832°F). Accuracy: $\pm 2\%$ of full scale. Furnace can be operated at temperatures below 400°C by rotating the control knob to a setting between OFF and LO.

Bench top unit, lightweight for easy portability. Hinged, split tube construction allows easy sample observation and rapid cool-down time. Ventilated base prevents damage to bench and tabletops. Welded steel cabinet with baked-on enamel finish: citron gray with charcoal black trim and control panel. An instruction manual is included. Exterior dimensions: 38Lx20Wx36cmH. Wt: 10kg.

10-549-120

10-549-125

Furnaces are available in single or 3-zone tube, crucible, and box models. All have separate control consoles to maintain specific operating temperatures.

Uniformity assured by even heat distribution around 360° of furnace chamber.

Control consoles function as furnace mount-

ing bases or may be utilized remotely. Digital set controls are fully automatic. Proportioning control plus automatic reset maintain $\pm 1^\circ\text{C}$ accuracy at thermocouple. Simply set desired temperature and forget it. Regardless of furnace load, repeatability is assured.

Furnaces may be operated in vertical or

horizontal positions. Double shell construction encases firebrick, insulation, and elements in inner steel furnace. Air convection between inner furnace and outer shell maintains cool outer surface temperatures. All furnaces and controls have attractive decorator finishes.

Single-Zone Tube Furnaces

Handle combustion boats, process tubes, atmosphere or vacuum retorts

Versatile combustion furnaces ideal for tensile and compression tests, annealing, and hardening.

Wire units mounted in refractory shapes help decrease heat loss. Increase temperature uniformity. 3 temperature ranges available. Without control console. See charts below.

1000°C max operating temperature. Helically coiled nickel-chromium wire heating units and 24-gauge Platinel® II thermocouple. For 120/240V 50/60Hz.	Lindberg Model No.	Chamber I.D. x L	Outer LxWxH	Watts	Shp. Wt.	Cat. No.	Ea

Three-Zone Tube Furnace

Meets radial and linear uniformity requirements

Similar to single-zone tube furnaces, except that heating unit circuitry is divided into 3 independent zones. When used with 10-467-210 control, input can be boosted to 2 end zones to balance heat losses and increase length of flat uniformity in center zone. Or one end zone can be operated cooler than center zone while other end zone is hotter, producing temperature gradient. 1200°C max operating temperature. Chamber, 6.4 IDx61cmL. Over-all, 80Lx

30Wx37cmH. 4100w. For 240V 50/60Hz. Shipping wt, 57kg (125 lb). Without control console.
10-467-2051025.00 (Lindberg 54357)

Control console for 10-467-205 furnace. Three control modules and 3 Triac power modules. Operates to 90 amp. 50Lx80W x23cmH. Shipping wt, 29kg (65 lb).
10-467-2101800.00 (Lindberg 59744A)

Crucible Furnace

For heat processing and melting to 1200°C

Furnace designed for vertical heat processing requirements and laboratory melting applications. Accepts crucibles, salt pots, atmosphere generators, atmosphere and vacuum retorts. Features close temperature uniformity, fast heat-up, rapid response. Heating unit is embedded high-temperature wire in refractory shapes. Platinel II thermocouple with 183cm lead wire. Chamber is

13 IDx20cmD. Over-all 37Lx 37Wx41cmH. For 120/240V 50/60Hz. 2448w. Shipping wt 41kg (91 lb). Without control console.
10-501-25D780.00 (Lindberg 56622)

Split Tube Furnace

Low-cost, with ±2.2°C repeatability

Use of low K-factor insulation enables furnace to reach temperature settings to 1010°C (1850°F) in just 30min. No-lag integral manual controller provides ambient temperature compensation and ±2.2°C (±4°F) repeatability. Split tube design permits quick access for rapid cooling and interchanging fixtures.
Dual-scale indicating pyrometer with 2% full scale accuracy. Scale in °C and °F. Nickel-chromium wire heating elements helically wound and supported in high temperature ceramic. Platinel II thermocouple.

Ordering Information: 2.5 ID x30cmL heating chamber. 34L x25Wx35cmH. For 120V 60Hz, 800w. Shipping wt, 18kg (39 lb) Can be used with 10-549-120 (above)

Muffle Furnaces

Operate from 66° to 1000°C with tight temperature uniformity

10-510

Muffle furnaces operate from 66° to 1000°C. Power selector has low, medium, and high input. Works in conjunction with solid-state Vari-Watt power level control. Memory Ring® Dial. Thermoregulator interrupts input at intervals determined by selected temperature. 1000° to 1093°C temperatures can be used intermittently. Nickel-chrome heating elements mounted on grooved ceramic plates.

Dual-scale pyrometer reads from 0° to 1100°C and 0° to 2000°F. Firebrick insulation. Stainless-steel cabinet and door encasement. Blue enameled, perforated steel panels surround cabinet and door face to minimize surface temperatures. Matching steel base. Two chromel-alumel thermocouples with all models. Spare provided. (Blue M M15A-1A, M25A-1A, M30A-1C)

Top of the Pipet Line

FISHERbrand® pipets. Calibrated capacity, tolerance, and Catalog No. are permanently printed on each pipet. And note the permanent amber markings —

won't fade or wash off. Fused, not etched — can't weaken glass. Extra-large numbers. Extra-sharp graduation lines. Color-coded bands (at no extra charge). **Plus**

the unique Tuf-Temp® treatment for tops and tips. Individually calibrated on today's most advanced equipment. See p 936.

Coal Testing Furnace

Meets ASTM specs for volatile matter tests

Determines volatile matter in coal in accordance with ASTM D271; *Gas Chemists' Handbook*, 3rd ed, p 17; ASA Standard K18.1. Designed by A. C. Fieldner, U.S. Bureau of Mines. Sample is placed in crucible and mounted in chromel wire sling inside furnace.

Ordering Information: Enameled metal. 3.8 dia x 15cmD insulated heating chamber. Over-all 14 dia x 32cmH. With crucible support but without crucible. For temperature controlling rheostat, see 10-507 below. For 115V 360w.
6-695.....64.00
(Hoskins FA-120)

For temperature determinations with 6-695 furnace, see 13-917 pyrometer controller on p 1006

115V rheostat for 6-695 furnace. To regulate temperature.
10-507.....47.50

Replacement heating unit for 6-695 furnace. Nickel-chromium wire element wound on refractory. 115V.
6-705.....25.00

Crucible support for 6-695 furnace. Nickel-chromium.
6-706.....9.45

For platinum crucibles for use with 6-695 furnace, see p 218.

6-695

Rheostat-Controlled Crucible Furnaces

Melt small quantities of ore, metal, salt. For heat-treating small samples, checking thermocouples and pyrometers. Chromel A heating coils wound on grooved refractory rest

against insulation without special refractory mounting. For temperature regulating rheostats, see listing below.
(Hoskins FD 101 and FD 104)

Temperature Controller

**For Thermolyne 1600, 1700, and 6000 series
furnaces . . . accurate within $\pm 1\%$ of
full-scale settings**

Set temperature dial to desired setting from 0° to 2200°F or 0° to 1200°C. Cycle light flickers when desired temperature is within proportioning band.

Uses silicone-controlled rectifiers as switching devices. Eliminates problems associated with relay-contactors. No contacts to pit or burn. No moving parts to fail. All solid-state.

Thermocouple break protection prevents heating element burnout. Additional control of critical temperature gained with cold junction compensation. (Thermolyne Furnaces on pp 388-389.)

Ordering Information: Easy to install. Mounts on bench or attaches to furnace with bracket. Max power rating, 35amp non-inductive loads at 240V. 22x23x30cmH.

10-555 Set-and-forget controls

10-557 Heavy-duty

10-550 For classroom

10-558 Fast drying

10-555 Fully Automatic Furnace

Has same Dubuque IV control as 10-554 furnace. Set desired temperature over range of ambient to 1093°C (2000°F) and let proportioning control take over. Red control light cycles to show heating or resting phase. With insu-light molded ceramic fiber insulation. More efficient, lightweight.

Ordering Information: Low mass embedded heating elements. Recessed, counterweighted door. Welded steel case. Air vent dissipates fumes and moisture. Perforated base. Chamber is 14Wx9.2Hx17cmD. Outside dimensions, 37Lx31Wx46cmH. Shipping wt, 19kg (42 lb).

120V 60Hz. 14amp, 1680w.

10-555510.00
(Thermolyne F-A10525P)

240V 50/60Hz. 7amp, 1680w.

10-555-1510.00
(Thermolyne F-A10520P)

10-557 Heavy-Duty Furnace

Bench-type. Recommended for heavy-duty applications. Unique double door permits lower section to be opened while top stays closed to minimize heat loss. Top section opens for full access. Max temperature, 1093°C (2000°F). Reaches 760°C (1400°F) in 90 min.

Ordering Information: Welded steel case. 15cm insulation. Heavy-gauge wire heating elements embedded in 4 plates. Chamber, 24Wx22Hx34cmD. Outside dimensions, 70Lx62Wx65cmH. Without temperature control regulator (see 10-558-21). For 240V 50/60Hz, 24amp, 5800w. With conduit connector. Shipping wt, 211kg (465 lb).

10-557680.00
(Thermolyne F-A1730)

Replacement heating elements. Embedded in refractory plates. For 10-557 furnace.

Type	Cat. No.	Ea
Side	10-557-5	41.75
Top or bottom	10-557-10	47.00

10-550 Educational Furnace

For secondary and college use. Permits operation at any temperature between 204° and 816°C. Ceramic-embedded heating elements protect coils from corrosive chemical attack. Counterweighted door serves as loading shelf.

Ordering Information: Perforated steel base. Chamber is 8.3cm cube. Outside dimensions, 13Lx15Wx23cmH. Shipping wt, 4.5kg (10 lb). For 120V 50/60Hz, 250w.
10-55089.00
(Thermolyne F-17015)

Furnatrol I Controller, see p 387.

10-558 Fast Drying Furnace

Faster heat-up, elements on all sides. Ideal for drying precipitates on glassware, performing fusions and ignitions, heat treating small parts. Heating elements, embedded in all 6 walls, heat all parts of chamber uniformly to 1038°C (1900°F). Door swings down for use as tray. Two air vents dissipate gas and moisture.

Ordering Information: Welded steel case. 8.9cm insulation. Chamber, 17Hx32Wx25cmD. Outside dimensions, 50Lx53Wx46cmH. Without temperature controller (see 10-558-21). For 240V 50/60Hz, 17amp, 4080w. With conduit connector. Shipping wt, 84kg (185 lb).
10-558610.00
(Thermolyne F-6020)

Furnatrol Controller

For 10-557, 10-558 furnaces. Indicating millivolt meter controller. Silicon controlled rectifiers control high amperage load to furnace, eliminating all relays and contactors. Dial scale, accurate within 1%, shows set point and actual furnace temperature.

The chromel-alumel thermocouple mounts on bench or attaches to furnace with mounting bracket. Scale range, 0°-2200°F and 0°-1205°C. 35amp max at 240V.

Ordering Information: Single phase, 240V 50/60Hz.
10-558-21580.00

Tired of the Drab Lab? Try Contempra™ Furniture

Six refreshing colors mix or match — green, orange, yellow, beige, white, and gray

All units in stock for immediate shipment

Drawers and cupboards interchangeable with appropriate parts

Complete Information

Check no. 9 on reader service card at end of blue index pages to order complete information about Contempra . . . no charge.

The Contempra Furniture Line Offers:

A variety of units

Base units, glove boxes, fume hoods, office furniture, completely-furnished water and wastewater laboratories, lab appliances.

And accessories

Fixtures for water, air, all services; plumbing traps; eye/face washer; safety showers; reagent shelves; stools and chairs; trough assemblies.

Exceptional features

Modular design of base units, glove boxes, and fume hoods simplifies lab planning and arranging. Corner cabinets such as in Revolva-Drawer™, maximize every available inch.

Aerated water fountains for eyes and face are handy to work areas in case of emergency.

Lab chairs are contoured to the human body to give maximum comfort.

In a service fixture, all parts subject to wear are contained in one removable unit, simplifying repairs.

Quality construction and materials

Strong, heavy-gauge steel; brass drop forgings; several worktop materials . . . from super-tough strength to light-abuse types; stainless steel; borosilicate glass.

Easy installation

A simplified 4-step procedure saves time and money. Worktops "tilt-in" under service shelving.

Rear convenient Assembly B (front): an island assembly with a flat worktop and a sink at the end.

Island assembly with two-tier elevated reagent shelves, providing extra storage space. Sink at end of island.

Contempra™

Contempra™ is laboratory furniture with distinction. Reason: it utilizes 25 years of Fisher experience in building quality laboratory furniture; and, it's a colorful eye-fel — six-tone furniture with basic white cabinets with gray doors and contrasting beige, green, gray, orange, and yellow interchangeable drawer fronts. Complementing the handsome colors are the squared-off, trim lines of Contempra cabinets themselves.

Versatile

Contempra base units are modular in design. They can be combined in assemblies to fit the floor plan and functional requirements of any kind of laboratory. In addition, there are Contempra modules specifically designed as "inch pinchers". Take our efficient Revolve-Drawer™ corner assembly for example. It converts a normally wasted corner into two tiers of revolving drawer space, a spacious worktop and service shelf plus a handy corner niche. And, there are more Contempra units which are just as efficient.

The complete Contempra line includes a wide variety of cabinets, fume hoods, sinks, storage cases, tables, stools and chairs — everything you need for the laboratory. Everything to make laboratory planning as simple as possible.

Durable

Contempra furniture has lasting quality built in, starting with its basic 18-gauge steel construction. Just as important, Contempra is manufactured in our own specially-equipped plant, according to time-tested construction principles. From the sturdy, dust-tight cabinet construction to the chemical-resistant phosphate treatment and baked-on epoxy acrylic resin finishes, Contempra is made to give you long, reliable service under hard daily usage.

Time-Saving Installation

Contempra means easy installation . . . just the basic steps shown at the right.

As a result, Contempra installation saves time and money. First, it permits all plumbing and electrical work to be done, without hindrance, *before* base units are set in place. Second, Contempra Tilt-In worktops eliminate cementing between worktops and service shelving. They simply "tilt" into position behind the service shelving and over the corresponding base unit to complete the installation.

The People Behind Contempra

The following pages tell a lot of the Contempra story. But there's more. If you would like further information or a Laboratory Planning Kit, our professional furniture specialists would be happy to help you. They can also assist in designing a laboratory layout if you like — just contact the Fisher branch in your area.

Construction and Installation

All Contempra installations are so assembled that they can be relocated at any subsequent time. Doors and drawers are sound deadened and readily removable for purposes of decontamination, cleaning, and/or repair. All hinges are applied to case and door bodies with 8-32x $\frac{3}{8}$ " flat head machine screws to allow replacement of hinge. No welding of hinges to either door or case. Standard cabinet units are so constructed that they will permit quick and easy change, after installation, from drawers to doors, or vice versa, or a substitution of two $\frac{1}{2}$ depth drawers in place of a standard depth drawer without the use of drills or machinery with the purchase of the necessary parts assuring against possible future problems in case of change of use or area. All support frames, curbs,

and partitions are integrated into a complete assembly.

1. Start with service lines – electric, gas, water, etc. Install support struts, either 91-390 (attaches to wall) or 91-395 (attaches to wall and floor, or just the floor to accommodate island and peninsula assemblies). These struts support the service shelving, brackets, and service lines.
2. Attach service shelves or (in this case) ledges directly to wall brackets or to the struts, then mount service fixtures to the ledging. Connect service lines to service fixtures and install plumbing drain lines. (Note: pipes are held to the struts with service pipe clamps.) Next, mount over-counter wall cases or appliances.
3. Position base units, level them, and join them together.
4. To complete the assembly, "tilt-in" Contempra worktops and add the fume hood superstructure.

Combining Components

Planning a laboratory of Contempra™ furniture is basically a matter of combining three components:

1. Base units

All are 22" deep, with several different widths.

2. Work tops

Choose widths to match that of base unit.

3. Service ledges and shelving

Lengths depend on total length of assembly.

Illustrated at the right are seven different combinations of these components. To choose the combinations best for your lab, you must first decide how much work top space you need . . . then select the combination accordingly.

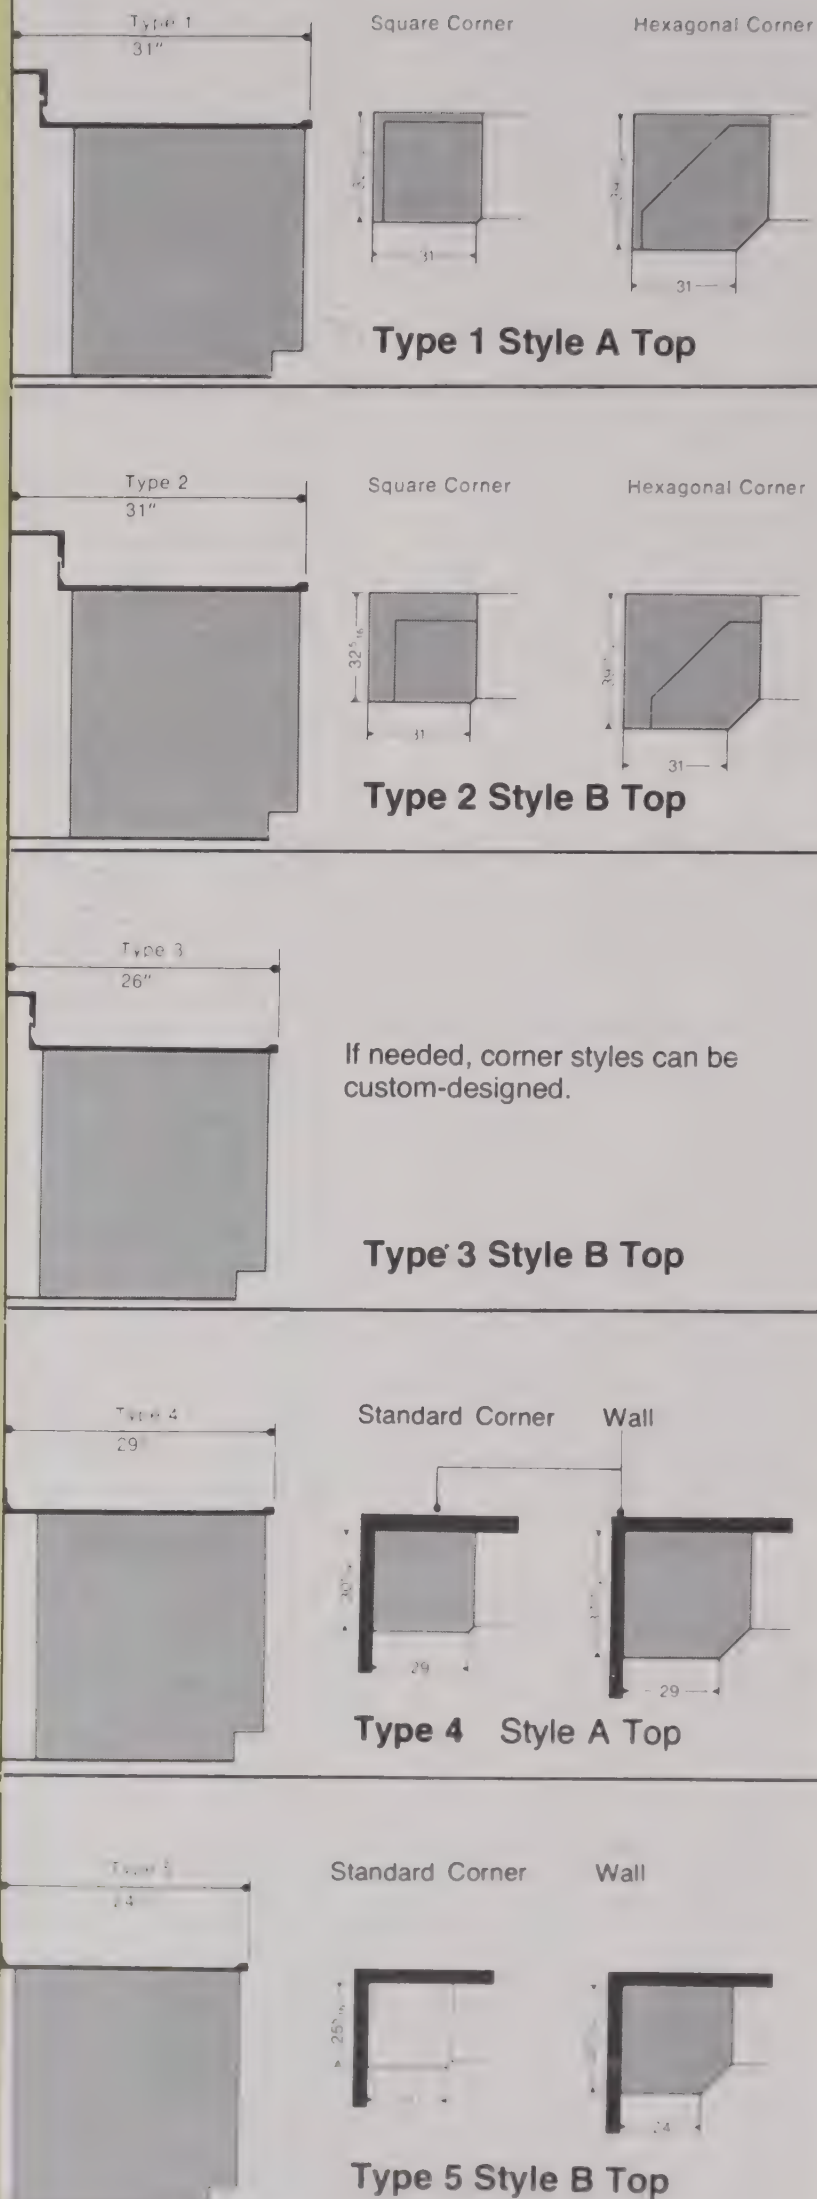

For example, if instruments will occupy much of the bench space, necessitating more working depth and requiring minimum storage on the service ledge . . . choose the Type 1 combination.

The large drawings are side views of wall and island assemblies, Types 1-7. The small drawings illustrate corner assemblies (hexagonal, square, or standard) which are possible with each type of workshop installation.

Wall assemblies are usually planned with a 8" raceway behind the base units for service lines and plumbing (see Types 1 and 2). If space is limited and the services can be deck-mounted, brought through the wall, or omitted, one of the special wall assembly combinations (Type 3, 4, or 5) can be used.

Standard island or peninsula assemblies (illustrated by Types 6 and 7) are 55" wide, and can be made with a flat top or a central service shelf.

Once the basic components have been selected, you then add the necessary auxiliary furniture (desks, chairs, service fixtures, and safety equipment). See pp 406 through 435.

Contempra™ Tilt-In Worktops

Contempra™ Tilt-In worktops are available in several styles (see drawings) and several different material compositions. Worktop materials vary in their resistance qualities and also in price. To choose the most economical and suitable worktop material, a laboratory planner should carefully analyze both the laboratory's type of work and work load. We recommend you discuss worktop materials with a Contempra furniture specialist.

Catalog Numbers:

Worktop catalog numbers indicate worktop styles — A, S, R, etc and also worktop material — Duratek®, etc.

Example: 97-10A-*

A — indicates style
* — a letter added in place of the asterisk indicates a specific worktop material and completes the catalog number. Use D for Duratek, T for Tech-Top, and R for Restek.

High-Abuse

Duratek (solid epoxy): excellent high-abuse material; superb resistance to mechanical and chemical abuse.

Intermediate

Tech-Top™ (asbestos cement, epoxy-coated); good for moderate abuse labs; fume hood areas.

Light-Duty

Restek™ (flakeboard, melamine resin surface): economical material for light-abuse labs.

Island Units

All worktops in this category do not have backsplashes. Style C tops are 24" deep; Style D, 31" deep.

Sink Assemblies

Sink assemblies include: base unit; worktop with basin cutout; Duratek® basin hangers to hold basin; plumbing — trap, overflow, and 91-462 faucet. (Except: 97-59A sink has 91-465 faucet; 97-59B sink has a 91-466 faucet.)

All sink assemblies are 35 $\frac{3}{4}$ " high. Top views show sink basin location within worktop. Side views show discharge position of standard P-trap.

Corner sink assemblies require either a hexagonal corner shelf or ledge. Wall assemblies require a service shelf or ledge. Sink units are placed at the end of island and peninsula assemblies (97-59A in a Type 7 assembly; 97-59B in a Type 6 assembly).

Lab Office Furniture

Contempra™ Desks

Finished in attractive shell white with light gray laminated plastic tops. Self-leveling legs have bright chrome finish. Drawer handles of bright anodized aluminum. Small drawers move on nylon glide suspensions; file drawers have progressive, balance ball-bearing suspensions with finger-tip response. Non-slip glides on legs hold desk firmly on any floor surface.

Available in 4 models differing in size, number of pedestals and drawers, and sub-core material. Storage drawers 23 $\frac{3}{4}$ Lx12 $\frac{1}{4}$ Wx5 $\frac{1}{2}$ "H. File drawers 27 $\frac{1}{8}$ Lx12 $\frac{1}{4}$ Wx11"H. 91-206 and 91-206-72 have center knee-space drawers with following dimensions: 17Lx19 $\frac{3}{4}$ Wx2 $\frac{1}{4}$ "H. When center drawer is closed and locked, all 5 drawers automatically lock. 91-206-72 is same as 91-206 except for 72" width and 6" overhang.

Pre-Designed Work Stations

Popular, functional work assemblies can now be ordered by a single Cat. No. No fuss, no bother. One Cat. No. includes cabinets, worktop, sink, and faucets . . . everything to turn any corner or empty room into a workable efficient mini-lab. The following are pre-designed assemblies of our most often requested items. Just add the desired service fixtures and electrical outlets and you're ready to work.

95-140 Wall Assembly

With tough Duratek® worktop

Consists of various size drawers, doors, and shelf area for general laboratory use. Duratek® worktop is complete with integrally molded backsplash and front and side drip edges. Accessories to include one 24Lx16Wx8"D Duratek sink basin, one glass P-trap assembly, and one deck-mounted mixing faucet. Additional service fixtures and electrical outlets are available and can be placed at customer's required locations. Over-all length is 13' 10"; over-all width is 29"; height to countertop, 37".

95-1402560.00

95-140

95-120 Wall Assembly

With accessory work shelf

Consists of various size drawers, doors, and shelf area. Duratek® worktop is complete with integrally molded backsplash and front and side drip edges. Also includes 8" wide laboratory grade plastic laminated shelf. Accessories include one 24Lx16Wx8"D Duratek sink basin, one glass P-trap assembly,

and one panel-mounted mixing faucet. Service fixtures and electrical outlets can be face-mounted or deck-mounted on shelf as customer requires. Over-all length is 11'10", over-all width is 31", height to countertop is 37", height to top of shelf 44".

95-1202368.30

95-120

95-310 Island Assembly

For 4-sided access

Center island assembly consists of various size drawers, doors, and shelf area and end of island sink assembly. Duratek® worktop is complete with integrally molded backsplash and front and side drip edges. Also included is 9" wide laboratory grade plastic laminated shelf. Accessories to include one 24Lx16Wx8"D Duratek sink basin, one glass P-trap, and one panel-mounted mixing faucet. Additional services and electrical outlets can be furnished at customer's required locations. Over-all length is 9'10", over-all width is 55", height to countertop is 37", and height to shelf is 44".

95-3104041.75

95-340 Island Assembly

Extra-wide work surface

Center island assembly consists of various size drawers, doors, and shelf area. Duratek® worktop is approximately 11" wide mid-shelf. Accessories include one 24Lx16Wx8"D Duratek sink basin, one glass P-trap, and one deck-mounted mixing faucet. Additional services and electrical outlets are available and can be placed at required locations. Over-all length is 13'10"; over-all width is 55"; height to countertop 37"; and height to top of center shelf is 61".
95-3405181.00

Contempra™ Laboratory Stools

Swinging Stool

Designed to be mounted by swinging bracket on wall or side of base unit. Seat swings out of way when not in use. Sturdy spring-loaded mechanism extends rubber foot to floor, when weight is applied. This reduces strain on mounting bracket. Stool is designed for use with 30" sitting height laboratory furniture. Has 5" adjustment range and extends to 23" from mounting bracket.

Constructed of steel with slate gray enamel finish. Dia of seat 13".

91-28561.00

Labconco Fiberglass Fume Hoods

One-piece fume hoods molded from polyester resin, reinforced with glass fibers. Exceptionally rugged, lightweight, and easy to clean. Color is integral component

of resin. Can't fade. Sashes are high impact PVC, counterbalanced for fingertip control. Available in Contempra™ colors

of beige, green, slate gray, yellow, or orange to match or blend with your Contempra cabinets. Or choose from Labconco colors of

char blue, electra blue, sunflower, copper mist, or tawny olive. Be sure to specify color when ordering.

Fiberglass-28 Portable Fume Hood

Designed for labs in schools, hospitals, clinics, and industry requiring small hoods that provide full service. Convenient, efficient, and safe for variety of applications. Ideal for labs with minimal space. Portability permits multiple work station use.

Weights less than 80 lb. Shipped fully assembled . . . can be easily moved and installed by lab personnel. Mounts safely on Contempra base cabinet, desk, or lab cart.

Hood dimensions: 28Wx23½Dx 46"H. Available with or without motor and blower.

With motor and blower

Supplied with blower and impeller of corrosion-resistant plastic. Motor is ½hp, 115VAC. Delivers 290cfm at 0" static pressure. Unit shipped completely assembled including motor, blower and sash, 115VAC vapor-proof light, and 2 switches. Shipping wt 105 lb.

93-221610.00

Without motor and blower

Unit is furnished without motor and blower, but has 4" OD round outlet collar for connection to remote blower. Includes sash, 115VAC vapor-proof light and one switch. Shipping wt 96 lb.

93-223540.00

93-221

Popular Fiberglass-47 Fume Hood

From medical to industrial to research labs — Fiberglass-47 is one of the most popular hoods in use today. Standard size hood provides full service work space to handle fume removal for wide variety of jobs.

Hood is shipped fully assembled, requires only venting and connection to electrical source.

Hood dimensions: 47Wx29Dx 59"H. Mounts easily on Contempra base cabinet or table (see p 396). Variety of models available:

With motor and blower

Fiberglass exhaust blower equipped with ½hp motor. Adjustable face velocity provides minimum of 720cfm at .25" static pressure. Hood includes 100w vapor-proof incandescent light, 2 switches, and clear, removable sash. 115V 60Hz. Shipping wt 294 lb.

93-2411100.00

Without motor and blower

One 8⅝" ID collar provided for connection to remotely located exhaust blower. Supplied with 100w vapor-proof incandescent light, one switch, and sash. 115V 60Hz. Shipping wt 272 lb.

93-243990.00

With fixtures

Includes six service fixtures with plastic-coated serrated tips: 2 gas, 2 vacuum, 2 cold water. Plus incandescent light, switch, and glass cup sink. 115V 60Hz. Shipping wt 284 lb.

93-243R1190.00

With motor, blower, and fixtures

Equipped with ½hp motor, provides minimum of 720cfm at .25" static pressure. Plus 2 gas, 2 vacuum, and 2 cold water fixtures, incandescent light, switch, and glass cup sink. 115V 50Hz. Shipping wt 306 lb.

93-241R1300.00

93-241

Intermediate Fiberglass-59 Fume Hood

Puts maximum hood space in minimum of floor space. The intermediate 59 is much more economical than two smaller hoods.

Shipped fully assembled. Hood dimensions: 59Wx29Dx59"H. Mounts conveniently on Con-tempa base units.

Available with full range of options:

With motor and blower

Fiberglass exhaust blower with 1/2hp motor. Adjustable face velocity provides minimum of 940cfm at .25" static pressure. Includes incandescent light, switches, and removable sash. 115V 60Hz. Shipping wt 335 lb.

93-2511300.00

Without motor and blower

10 3/4" ID collar provided for connection to remotely located exhaust blower. Supplied with incandescent light, switch, and sash. 115V 60Hz. Shipping wt 313 lb.

93-2531200.00

With fixtures

Complete with six service fixtures with plastic-coated serrated tips: 2 gas, 2 vacuum, and 2 cold water. Plus incandescent light, switch, glass cup sink, 10 3/4" ID collar for connection to remote blower. 115V 60Hz. Shipping wt 326 lb.

93-253R1400.00

With motor, blower, and fixtures

With 1/2hp motor, provides minimum of 940cfm at .25" static pressure. Plus 2 gas, 2 vacuum, and 2 cold water fixtures, incandescent light, switch, and glass cup sink. 115V 60Hz. Shipping wt 347 lb.

93-251

Full-Size Fiberglass-70 Fume Hood

More space for equipment and greater operating comfort for technician. Provides added capability for continuous or multiple-phase applications like distillation procedures, yet won't crowd your lab.

Dimensions: 70Wx29Dx59"H. Available with full range of options:

With motor and blower

Fiberglass exhaust blower with 3/4hp motor provides minimum face velocity of 1140cfm at .25" static pressure. Includes incandescent light, switches, and removable sash. 115V 60Hz. Shipping wt 369.

93-2711450.00

Without motor and blower

10 3/4" ID collar provided for connection to remotely located exhaust blower. Supplied with incandescent light, switch, and sash. 115V 60Hz. Shipping wt 347 lb.

93-2731290.00

With fixtures

Complete with six service fixtures with plastic-coated serrated tips: 2 gas, 2 vacuum, and 2 cold water. Plus incandescent light, switch, and glass cup sink. 115V 60Hz. Shipping wt 359 lb.

93-273R1490.00

With blower, motor, and fixtures

With 3/4hp motor, provides minimum of 1140cfm at .25" static pressure. Plus 2 gas, 2 vacuum, and 2 cold water fixtures, incandescent light, switch, and glass cup sink. 115V 60Hz. Shipping wt 381 lb.

93-271R1650.00

93-271

Extra-Wide Fiberglass-96 Fume Hood

Offers added capability of two-person or multi-apparatus applications. Extra-wide interior working area is almost a small lab in itself. All models of this hood come with service fixtures for gas, water, and vacuum — operable from outside the closed sash. Two 10 $\frac{3}{4}$ " ID collars provided for connection to remotely located exhaust blowers. Can be conveniently mounted on Contempra base unit. Hood dimensions: 96Lx29Dx59"H.

With fixtures and horizontal sliding sash
Hood supplied with two incandescent lights, switches, all service fixtures, and five-piece horizontal sliding sash assembly with stainless-steel foil. Shipping wt 520 lb.
93-2912200.00

With fixtures, without sash
Hood supplied with incandescent lights and switches, all service fixtures, and stainless-steel foil. Shipping wt 485 lb.
93-2931950.00

93-291

Stainless-Steel Perchloric Acid Fume Hoods

Designed for safe handling of perchloric acid fumes in wide range of laboratory applications. Constructed of one-piece seamless, nonreactive stainless-steel with coved interior corners. Hood includes safety washdown system — prevents accumulation of perchloric salts or other potentially hazardous residue. Factory-installed warning light indicates when water pressure is insufficient for thoroughly safe washdown. Sash features $\frac{1}{4}$ " tempered safety glass. Electrically operated solenoid valves control both duct and hood washdown systems. Air flow monitor is factory-installed too. Available in 47", 59", and 70" sizes. All complete with 2 gas, 2 vacuum, and 2 cold water fixtures, glass cup sink, and incandescent lights.

Perchloric Acid-47 with fixtures
Dimensions: 47Wx29Dx59"H. 11" ID, 316 stainless-steel connection provided on top of hood for attachment to exhaust system. Shipping wt 375 lb.
93-2642850.00

Perchloric Acid-59 with fixtures
Dimensions: 59Wx29Dx59"H. 11" ID, 316 stainless-steel connection provided on top of hood for attachment to exhaust system. Shipping wt 415 lb.
93-2653250.00

Perchloric Acid-70 with fixtures
Dimensions: 70Wx29Dx59"H. 11" ID, 316 stainless-steel connection provided on top of hood for attachment to exhaust system. Shipping wt 475 lb.
93-2663575.00

Fiberglass Advance-70 Fume Hood

The ultimate in fume hood technology. Generous work space, integral one-piece work surface, and built-in cup sink drain. Provides facility for low-level radioactive experiments requiring decontamination, washdown, and disposal of waste materials. Seamless, coved interior protects against spills and radioactive build-up. Advance-70 offers chemically inert, corrosion-proof working area with full array of factory-installed fixtures: 2 gas, 2 vacuum, 2 cold water, 2 air, light and switch, cup sink, four 115V outlets, and two 230V outlets. Shipping wt 470 lb.
93-271A2400.00

93-271A

Ask About Add-Air Models

Most of these Fiberglass Hoods are also available in Add-Air models. Employ second blower to draw in 60% of exhaust air from outside the laboratory. Results in substantial savings in air-conditioning costs. For more information on all the variations of Fiberglass Fume Hoods, telephone your Fisher branch.

Accessories for Fiberglass Fume Hoods

Tech-Top Support Tops

Available with or without service cut-outs. Fit underneath Fiberglass Fume Hoods. Easy to cut, excellent for modifying existing work tops for service lines.

Snuffer — Fume Hood Fire Extinguisher

Offers automatic 24-hour protection against Class A, Class B, and Class C fires. Fusible link is set at 255°F.

Should fire occur within hood, Snuffer automatically releases non-toxic ABC dry chemical powder. Extinguishes fire — prevents re-ignition.

No plumbing or electrical connections required. Shipped complete with mounting bracket, template, and instructions. Visual pressure gauge for inspection. Rechargeable.

93-201109.00

Fisher Scientific Company

Lab-Larm®

Fume hood protection may fail if duct static pressure increases or blower velocity decreases, so face air velocity drops below safe level. If this happens, Fisher Lab-Larm® will warn you with shrill whistle and flashing red light.

Dual-limit pressure switch is connected by Tygon® tube to static pressure probe in hood. If pressure rises or falls more than 10% from set value, alarm will sound.

Pushbutton cuts off whistle, but warning light stays on until you switch it off. (Unit has key-lock switch.) You can check alarm periodically with test button.

Lab-Larm Airflow Sentinel can be used in any fume hood, except with radioactives, perchloric acid, and explosive or flammable materials. It meets requirements of Scientific Apparatus Makers Association. Operating range is 0.25" to 1.50" water pressure.

All solid-state circuits operate from 22.4V mercury cell. Warning light is light-emitting diode — can't burn out. Alarm module, pressure switch, and probe with tubing, connector, and battery.

93-150142.00

93-150

Velometer Monitors Air Velocity and Static Pressure

Fume hoods will not give adequate protection if face air velocity is too low. Face velocity will drop if static pressure in hood rises too high. You can use Velometer to measure both accurately ($\pm 2\%$ of full scale).

Velometer uses 24" Pitot probe to reach into fume hoods and ducts. Air velocity is shown on three scales: 0-300, 0-1250, and 0-2500 feet per minute and static pressures up to 3.0" water with special probe and scale. In foam-lined carrying case with range selector, probes, and heavy rubber connecting hoses.

93-750602.30

93-750

Velometer Jr. Air-Flow Meter

Reads fume hood and duct air velocities on two ranges (0-200 and 0-800fpm) when you hold it in air stream. It does not measure static pressures. In leather case.

93-751146.40

93-751

BioQuest Biological Safety Cabinet

Protect the worker as well as his work. Laboratory personnel can work at a BioQuest Cabinet as freely as at a fume hood . . . yet they are as safe from infection as if they were working in a glove box. Infectious particles inside cabinet can't escape through its unique air barrier, and contaminated outside air can't get inside.

Supply and exhaust blowers built into top of cabinet, each with its own set of HEPA filters. Service fixtures include outlets for gas and air or vacuum, double electrical outlet, fluorescent lights and UV lamp to permit sterilization, and drain pan to catch spills. Transparent view screen is sloped at 14° to eliminate reflection.

Cabinet is sheet steel, attractively finished in dark blue and white enamel. Over-all dimensions: 47Wx34Dx58"H. 115V 60Hz.
Note: This unit must be certified for proper safe operation **before** use. The manufacturer will certify it 2 to 4 weeks after delivery to you.
92-7003996.00

92-700

Horizontal Laminar Flow Benches

Ideal for assembly of small electrical and mechanical components, where dust cannot be tolerated. Also for tissue culture, sterility testing, and drug preparation. *Not intended for use with infectious materials, since user is not protected.*

Room air is drawn into cabinet through system of filters — removing 99.99% of dust particles larger than 0.3 micron.

Available in 2 models:

Bench Model
Can be plugged in and used anywhere. Over-all dimensions: 50Wx42Dx47"H. Accessible work area: 47Wx24Dx22"H.
92-7751607.00

Extra-Height Floor Model
Over-all dimensions: 74Wx44Dx64"H. Accessible work area is a roomy 28" high.

Glove Boxes

Fiberglass Bacteriological Glove Box

Features permanently installed glove ports, ultraviolet light, and HEPA filter system. This Class III enclosure is designed to safely handle hazardous materials in wide range of biological applications.

A 115V, 1/15hp variable speed blower is built in. Large 8" plastic glove rings and ample 17" center port spacing make it easy for any operator to work in comfort. Extra-large access door makes loading quick and easy.

Box interior may be disinfected by ultraviolet germicidal mercury lamp. Generates 2537 Angstroms at predominate wavelengths.

Easy-to-read magnehelic gauge monitors air flow through glove box. Maximum observation area provided by large 16x31" safety glass window. 29"Lx37"Wx36"H. Shipping wt 130 lb.

92-1501729.00

92-150

Fiberglass Controlled Atmosphere Glove Box

Unique one-piece fiberglass construction is ideal for controlled atmosphere and anaerobic work.

Provides tough, safe working area that is fire-retardant, corrosion-resistant and chemically non-reactive. Easy to clean and purge.

Rated for pressure drop not to exceed 1" water gauge in two hours (starting positive pressure; 2" water gauge). Leak rate less than 7cc per minute at positive pressure of 2" water gauge. Maximum working pressure is 5" water gauge, positive, or 10" water gauge, negative. Transfer chamber may be evacuated to 150 microns.

Five valves factory-installed for any pressurizing or purging arrangement. Vacuum-type interchange box sized to allow convenient passage of large items into glove box. Large 8" plastic glove rings and ample 17" center port provided. 29"Lx50"Wx36"H. Shipping wt 165 lb.

92-3501795.00

92-350

Fiberglass Radioisotope Glove Box

Combines generous space with integrated one-piece work surface to give ideal facility for low-level radioactive experiments.

Poly laminate construction of fiberglass-reinforced polyester resin provides one-piece covered interior free of joints or crevices, to contain spills and protect against radioactive build-up.

Smooth-as-glass interior permits quick, easy decontamination — maximum operator efficiency is maintained.

A 115V 1/15hp variable speed blower built in. Easy-to-read magnehelic gauge monitors air flow through glove box. Dual, in-line HEPA exhaust filters prevent contamination risks.

Large 8" glove rings and ample 17" center port. Interchange box in sizes to allow passage of large items. Safetyglass window is 16x31". 29"Lx50"Wx36"H. Shipping wt 165 lb.

92-2501850.00

92-250

Fiberglass Biological Safety Cabinet

This Class I enclosure is designed to safely handle hazardous materials in fields such as bacteriology, microbiology, virology, and culture analysis.

Maximum safety assured by built-in HEPA filter. Power variable speed blower maintains constant negative pressure within enclosures. Easy-to-read magnehelic gauge monitors pressure drop across exhaust at all times.

One-piece fiberglass reinforced polyester cabinet is permanently bonded to melamine covered work surface making sterilization quick and easy. Box interior is disinfected by ultraviolet germicidal mercury lamp. Generates 2537

Angstroms at its predominate wavelengths.
All switches, outlets, and wiring are factory-installed. Simply plug into electrical outlet, attach venting, and installation is complete. 115V 60Hz. Shipping wt 135 lb.
92-5501460.00

Fiberglass Tissue Culture Hood

Provides circulation-free environment to eliminate cross-contamination in sterile techniques such as tissue staining, culture growth, and virus harvesting. Its large area and convenient design give ample room for media preparation and bulky equipment.

Surface decontamination inside hood is maintained by built-in ultraviolet light. UV-proof safety-glass sash provides full view of hood interior. Lifts up to accommodate full view of hood interior. Lifts up to accommodate large items and facilitate cleaning. Bifold doors swing open and close for additional operator convenience.

Molded entirely of fiberglass reinforced polyester . . . crevice-free interior with coved corners assure easy cleaning. No accumulation of contaminants.
Unit is shipped fully assembled. Simply plug into electrical outlet and hood is ready for use. 115V 60Hz. Shipping wt 71 lb.
92-500560.00

Glove Box — Budget-Priced from Manostat

Versatile as well as economical. Use as glove box, dust box, dry box, or environmental enclosure.

Plexiglas® construction with 5/16" thick walls. Provides optimum visibility from all sides. Unaffected by most inorganic solutions, oils, low concentrations of alcohol, paraffinic and olefinic hydrocarbons, amines, alkyl monohalides, and esters containing more than 10 carbon atoms.

Front plate chemically welded to back — one-piece mold forms dustproof seal. Two 12" side entries for attachment of accessories or interconnection of other glove boxes. Two front 8" circular glove holes accept any standard glove

36Lx20Wx26"H. With 2 side access opening covers.

For connection to 11-391-100 glove box. With interior cover and coupling sleeve.
11-391-108175.00
(Manostat 41-905-002)

Vent Outlet

Glove boxes may be conveniently vented through room window by substituting plexiglass for window pane and cutting 2" hole in plexiglass to accept vent outlet.
92-09513.00

Water Fixtures

Choose from wide variety including deck and panel mount, single and double faucets.

All working parts including stainless-steel seat are removable for easy replacement. Installation of renewable kit, consisting of all

working parts, essentially creates new fixture at minimal cost.

Standard faucets can be replaced with self-closing type.

Built-in flow control can be adjusted for your specific water pressure. This eliminates excessive

splashing and minimizes wear of working parts.

Body and 4-arm handle are constructed of chrome-plated brass. Valve disc is Teflon®. Replaceable seat is stainless steel. Other working parts are brass or monel. Each

fixture tested for 100psi pressure. With serrated hose connector, threaded brass shank, and locknut. Color-coded screw-on index buttons identify hot and cold faucets.

Single Faucets for Panel Mounting

With swing gooseneck

Serrated hose connector and vacuum breaker. Supplied with 1/2" IPS x 2 3/8" brass shank, locknut and washer.

91-461PV45.80

8" Swing gooseneck spout

Union inlet adjustable flange with 1/2" thread IPS, 2 3/8" brass shank, locknut and washer.

91-48129.90

With fixed serrated hose connector

With hose connector angled at 30° to horizontal. Handle and faucet centers are 4" apart. With 3/8" inlet, shank, locknut, and washer.

91-40333.75

With removable serrated outlet

With wall flange, 3/8" IPS x 2 3/8" shank, locknut, and washer.

91-455W20.40

Inverted gooseneck

Inverted gooseneck with 5 3/4" spread designed specifically for glassware rinsing. With vacuum breaker and 1/2" IPS thread.

94-19160.40

Single Faucets for Deck Mounting

Gooseneck with integral valve handle

12" high swivel gooseneck with 6 1/4" spread. Spout clearance is 5 3/4". With serrated hose connector 1/2" IPS inlet, shank, locknut, and washer.

91-47026.80

Combination water faucet and gas cocks

Two ground key gas cocks are mounted 180° from each other and 90° from water faucet. All are mounted on turret base. Rigid gooseneck faces 180° from its handle.

Gooseneck is 13 7/8" high, has 5 3/4" spread and 7 5/8" spout clearance.

Water faucet has 3/8" IPS female tapping while gas cocks have 3 3/8" IPS. All have serrated hose connectors, 4" shanks, and locknuts.

91-47949.60

Double Faucets for Panel Mounting

Gooseneck with integral valve handles

9 1/4" high with 3" spout clearance. Centers of handles are 8" apart. With serrated hose connector, two 1/2" IPS x 3" brass shank with locknut and washer.

91-47656.50

With serrated hose connectors

Pair of faucets mounted 90° angle from each other on panel flange. With 3/8" IPS x 2 3/8" brass shank with locknut and washer.

91-415W41.00

Double Faucets for Deck Mounting

Double cold water faucet with gooseneck

Turret base supports 2 valves: a rigid gooseneck 16⁷/₈" high, and lower straightway valve. With 2 serrated hose connectors, 1/2" IPS x 4" shank.

94-19361.90

With vacuum breaker

94-193VB83.45

With serrated hose connector

Pair of faucets mounted 90° angle from each other on turret base. With 3/8" IPS x 4" shank with locknut and washer.

91-451W39.80

Distilled Water Faucets

Lined with 1/16" layer of 99.97% pure virgin tin. This prevents contamination of distilled water supply. For maximum purity, faucets should be used with tin-lined tubing. Body is nickel-plated brass.

For systems with more than 30psi pressure

Rigid gooseneck faucet with self-closing valve. 12" high, has 6 1/4" spread and 9 3/4" spout clearance.

With 1/2" IPS inlet, shank, locknut, and washer.

Type	Cat. No.	Ea
Deck mount	91-443	52.40

For systems with less than 30psi pressure

Dual purpose handle can be used for manual or self-closing operation.

Silicon plunger-valve maintains maximum purity. Orifice is 3/8". Centers of faucet and inlet are 6" apart in 91-441 and 4 3/8" in 91-442. Spout clearance is 12" in 91-441.

With 3/8" IPS inlet, locknut, and washer

Type	Cat. No.	Ea
Deck mount	91-441	113.00
Panel mount	91-442	89.65

Accessories for Water Fixtures

Double pedal foot control

For self-closing mixing valves. Dual foot pedals control hot and cold water valves of any Fisher double faucet. Hands are free at all times. With 1/2" IPS inlets and outlets. Base 2Lx5 1/8Wx2 1/2"H.

91-44958.15

Aerator

Mixes air with stream of water to reduce splashing. Fits all Fisher faucets except 91-403. With 3/8" threaded male inlet.

91-4043.90

Aerator

Faucet attachment mixes millions of tiny air bubbles with fast-moving water to prevent annoying splashes.

When water strikes surface, bubbles cushion its fall. Result: no splash. Glassware rinses cleaner with less effort. Rubber molded sleeve fits snugly over faucet. Nozzle with series of air ducts surrounds perforated brass disc which breaks force of water.

14-551Bag of 3/3.15
Pk of 12/11.35

Vacuum breaker

Outlet type (OVb) fits all Fisher faucets. With 3/8" IPS male inlet, 3/8" female outlets.

91-40711.70

Steam Fixtures

Have durable heat-resistant Teflon® disc with stainless-steel seat. Working parts are readily accessible for servicing. Body is heavy wall construction. Handle is black, heat-resistant, palm-grip type. All units have serrated hose connectors.

Panel mount with separate handle and tap

Centers of handle and tap are 4" apart. Nozzle is 30° angle to horizontal. With 3/8" IPS female inlet, shank, and locknut.

91-41322.85

Panel mount with integral handle and tap

Nozzle is 30° angle to horizontal. With 3/8" IPS x 2 3/8" brass shank with locknut and washer.

91-455S22.40

Pedestal base, deck mount

Straightway valve is mounted on turret 2 3/4 H x 2" D With 3/8" IPS x 4" brass shank, with locknut and washer.

91-450S25.50

Splashgon®. See p 325.

Airjector® Filter Pump. See p 325.

Air, Gas, and Vacuum Fixtures

Choice of either floating needle valves or ground key cocks. Needle valves are constructed to provide tight, close control for pressures up to 1,000psi. Consists of precision-ground, self-centering

stainless-steel cone and seat. All wearing parts are easily replaceable. Key cocks are individually ground and lapped to provide instant

on-off control. Tested under water at 100psi air pressure. Constructed of chrome-plated brass and stainless steel. Each cock has at least one serrated hose connector and

color-coded, screw-on index buttons. *For proper index buttons, please specify usage for air, gas, or vacuum.*

Needle-Valve Cocks

Deck-mount, turret base

Turret base is 2 sq in x 2 1/4"H. Serrated hose connectors are removable. With 3/8" IPS x 4" brass shank, locknut, and washer.

14-548

Remote Control Fixtures

Protect you from direct contact with highly reactive or toxic reagents. Fixtures are mounted inside fume hood and controlled externally. Fixtures are plastic-coated for resistance to chemical vapors.

Coating is color-coded to match external control.

With external control valve assembly, connecting rod, serrated hose connector, $\frac{3}{8}$ " IPS inlet, and threaded shank.

Water Fixtures

Deck mount

Single faucet mounted on turret base for use with cupsinks. Gooseneck is 10 $\frac{3}{4}$ " high and has 5 $\frac{3}{4}$ " spread.

Designed for use with conventional fume hoods using 91-793H or 91-794H base units. For cold water operation only.

91-42139.30

Wall mount

Single rigid gooseneck faucet for use with cupsink. Designed for Contempra™ Conserv-Air and Auxiliary Conserv-Air fume hoods. For cold water operation only.

91-42437.90

Air, Gas, and Vacuum Fixtures

Deck mount

Single needle valve cock with serrated hose connector at 30° angle to horizontal.

For use with conventional fume hoods using 91-793H and 91-794H base units.

KIMAX® Brand Tempered Glass Plumbing

Owens-Illinois KIMAX® brand glass is rugged and resistant to chemical attack. Handles liquids from their freezing points up to 100°C continuously. (For continuous operating temperatures above 100°C, see your Contempra™ representative for recommendations.)

Same outstanding qualities incorporated in all couplings and accessories. Couplings manufactured from 300 series stainless-steel outer shell, Buna-N rubber compression liner and TFE seal

rings. KIMAX sink outlets are manufactured from filled TFE fluorocarbon polymer . . . all wetted parts within KIMAX drainline system made of borosilicate glass or TFE.

Patented leakfree joint assembly

provides maximum chemical resistance. KIMAX pipe can be installed behind walls, over ceilings, or underground with confidence. Lightweight — requires only 1/2 to 1/3 as many hangers as conventional high silica iron pipes.

P-Trap and Sink Strainer

Standard equipment on all Contempra sinks. Sink outlet 91-551K has 8" tailpiece that fits inside 2" dia inlet of P-trap 91-529K. Adapter coupling 91-523K joins pair. Assembly is 14"H. Discharge of trap is 8±2" below sink outlet.

91-510K.....44.00

Trap Assembly Components

Swivel drum P-trap

2" inlet x 1 1/2" outlet, without cleanout. Includes body, outlet quarter bend and coupling. 11 3/4"H from center of inlet to base of drum body; 11 1/2"L from inlet to center of outlet. Trap is basic component of 91-540K assembly.

91-527K.....40.90

Swivel P-Trap and Sink Outlet/Strainer

Has 2 adjustable couplings providing extra flexibility during installation and cleaning. Drainline elbow swivels laterally. When couplings are loosened trap can be removed without disturbing sink alignment.

19 1/2" over-all. Discharge of trap is 11 3/4±2".

Consists of 91-532K trap with 91-551K sink outlet, and 91-523K adapter coupling.

91-520K.....56.00

P-trap

Has 2" inlet x 1 1/2" outlet, without vent or cleanout. 7 7/8"H. 8" from center of inlet to outlet. Included in 91-510K assembly.

91-529K.....17.10

Swivel P-trap

Two sections joined by coupling. 2" inlet x 1 1/2" outlet. Without cleanout. 11" from center of inlet to outlet; 8 7/8"H. Basic component of 91-520K assembly.

91-532K.....29.00

Swivel S-Trap with Sink Outlet

For discharge to below-the-floor drain. Has 1 1/2" sink outlet, 2" trap inlet, 1 1/2" trap outlet. 31"H and can be adjusted ±2". 10"W from center of inlet to center of outlet. When 2 adjustable couplings are loosened, entire trap (91-536K) can be removed.

91-530K.....56.25

Swivel S-trap

Two sections joined by 1 1/2" drainline compression coupling with stainless-steel shell. 2" inlet x 1 1/2" outlet. Without cleanout. 10" from center of inlet to center of outlet. 7 7/8"H. Basic component of 91-530K assembly.

91-536K.....29.50

Swivel Drum P-Trap Assembly

This assembly has same advantages as swivel P-trap assembly 91-520K. However, larger capacity of drum trap 91-527K makes it less likely that drain will be blocked if broken glass, wire, etc should get into trap and wedge there. Drum is readily removed for cleaning by loosening two couplings. Assembly is 20 1/8"H; discharge of trap is 8±2".

91-540K.....66.75

Sink outlet, 1 1/2"

With 8" integral tailpiece. 13Hx3"W across top, fitted with gasket and take-up nut.

91-551K.....18.50

Adapter Couplings, 1½"

Glass to glass

Used to join KIMAX® brand drainline pipe and/or fittings to plain end sink tailpieces. Assembly consists of segmented stainless-steel outer band, Buna-N rubber adapter, TFE adapter seal, and bolt. Can be used with lead, Class D or XL tailpiece, PYREX® brand tailpiece and cup sink, plain end KIMAX brand, regular schedule or heavy schedule, 1½" glass pipe or fittings. Coupling is 2"W, 1¾"H.

91-523K.....8.55

91-523K

Glass to metal

Used to connect glass with sink outlet of metal tubing, and lead tailpiece extensions. 2"W, 1½"H.

91-524K.....8.55

Glass to plastic

Used to connect glass with plastic or steel (1½" IPS), Durcon SO-2, Duriron 11713, or lead Class C or L, B or M. 2"W, 1¼"H.

91-525K.....8.55

Bead to plain end

Drainline coupling used for joining 1½" KIMAX brand beaded glass drainline to plain end (cut) glass pipe, lead, IPS metal, or plastic pipe. Exclusive design consists of stainless-steel band with bolt, Buna-N rubber compression liner with TFE seal ring, and silver-plated stainless-steel hex nut.

91-526K.....5.90

Drainline coupling

Joins beaded ends of KIMAX brand drainline pipes to fittings. 1½".

91-521K.....4.60

Beaded adapters, 1½"

For joining metal or plastic pipe with IPS threads to glass drainline fittings.

91-522K.....4.65

Cup Sinks

KIMAX® brand sink

Outside surface of cup sink bodies has opaque white surface. Tailpiece is 1½" dia like trap assemblies. Will fit into 2" dia inlet of trap 91-529K, 91-532K, 91-527K, and 91-536K. Locked in place by 91-523K coupling. Available in two sizes.

LxW	Cat. No.	Ea
3x6"	91-561K	18.40
3x9	91-562K	25.50

91-561K

Duratek™ sink

Constructed of same molded epoxy resin that is used to manufacture Duratek™ table tops. Requires different cut-out size than KIMAX® brand sink, so specify Duratek sink on your order. Sink has 1½" IPS straight threads. Coupling 91-522K will connect this fitting to KIMAX drainline.

LxW	Cat. No.	Ea
3x6"	91-561D	20.90
3x9	91-562D	26.05

91-561D

91-562D

Beehive type overflow

Made of black fluorocarbon plastic. Fits 1½" sink outlet. Maximum length, 8". Modify by cutting off top beehive section.

91-511K.....14.00

Vulcathene® Polyethylene Plumbing

Made of virgin polyolefins selected to give the ultimate in maintenance-free performance. Withstands shock and impact over wide range of temperatures; handles

intermittently hot liquids to 100°C, cold liquids down to -55°C. Non-toxic and resistant to both corrosive attack and build-up of scale or

sludge. Smooth non-porous bore — radioactive wastes can simply be washed away. Handles virtually all of the most corrosive materials, such as hydrofluoric and silica

etching acids, as well as all commonly used laboratory acids.

All connections made with threaded joints for easy assembly.

Cup Sinks

6x3" Oval Cup Sink

Vulcathene® resiliency means less chance of breakage compared to non-shock absorbing sinks. Includes integral tailpiece — eliminates leakage problems.

91-561P9.15

9x3" Oval Cup Sink

Integral tailpiece included.

91-562P16.25

Regular-duty rectangular cup sink

15Lx5Wx6"D. Integral tailpiece included. Center drain.

91-563P40.00

Dilution Tank

Use wherever high concentrations of acids are disposed. Charge with marble or limestone chips to create reaction with acid that will result in far less corrosive material. Or use a simple dilution basin in which highly concentrated wastes are mixed with wastes from other lab areas to produce diluted solutions.

Easy to clean and recharge. 4.2 gallon capacity.

91-596P136.00

Drainline Trap Assemblies

Polyethylene P-trap assembly

Consists of 1½" sink outlet, P-trap, street elbow, and 1½x6" straight pipe.

91-510P42.10

Drum trap assembly

Consists of 1½" sink outlet and drum trap.

91-540P33.40

Jar trap assembly

Consists of 5/16" sink outlet and jar trap.

91-541P48.70

Accessories

Vulcathene® 1½" Sink Outlet

Standard square top tailpiece assembly includes backnut, plug, and strainer. Fits all standard openings.

91-551P9.20

Overflow standpipe

For use in 91-563P sink. 1½" dia, 7" length.

91-511P3.60

Adapter

Male 1½" NPT X spigot.

91-516P3.80

Electrical Fixtures

Most laboratories require several electrical outlets, placed strategically on shelves and decks throughout lab.

Fisher line includes choice of three types:

(1) Flush boxes, to be set into front panel on service shelf.

(2) Pedestal boxes to fasten to worktop of flat deck island or peninsula.

(3) Multi-outlet strips and boxes to be mounted on front or top of shelving, or placed on the bench-top for mobility.

120V 15 amp units use Hubbell 5252 outlets. 208V 15 amp units use Hubbell 5652 outlets. All are 3-wire grounded outlets.

Plug Strips

120V, 15 amp outlets

Shell-white strip for mounting on front of service shelf or on ledge above faucets and gas cocks. Strip has six heavy-duty, 3-wire grounded outlets spaced at 9" intervals. Knock-out plugs on back and ends are used to connect strip to service line or in series (end-to-end). Strip is 72Lx1¾Hx1½"W.

91-43921.20

Electrical Boxes

Six outlets

For attaching to front or top of service shelving, or for resting on bench top. Single "on-off" switch, pilot light, and panel-mounted circuit breakers on all outlets. Shell-

white box is 13½Lx1½Hx2¾"W. Wt 3 lb. With 6' heavy-duty neoprene-covered line cord.

91-43719.85

91-437

Four outlets

Similar to 91-437, but feature 4 color-coded, 3-wire grounded switch/outlet sets, each with pilot light and control switch. Circuit

breakers protect unit. Comes with 3-prong plug and 6-foot line cord. Operates on 115V, 15 amp.

91-43823.30

91-438

Drawer/ganizer™ Units

These handy compartmentalized trays keep everything in its proper place. No more need to rummage through cluttered, messy drawers. Constructed of heavy-duty polystyrene. Fit drawers of all

standard modular metal lab furniture. Withstand heavy use and abuse. Clean with damp cloth.

Stopper Spacers

Perfect for rubber, glass, and cork stoppers; small hardware items; and all those laboratory supplies that usually get mixed together in one large drawer. Large size has 16 compartments; small size, 12.

Size	LxWxH	Cat. No.	14-334-12 Box of 2

Dust Cap

Provides sloping surface that doesn't hold dust like flat top. Also easier to reach and clean. Steel finished in shell white enamel.

For Case No.	Cat. No.	Ea
91-880 & 91-883	91-895-3	51.00
91-885 & 91-887	91-895	56.00

Conserv-Air® Hoods for Special Jobs

Conserv-Air® fume hoods are more efficient with a face air velocity of 70 feet per minute than conventional or balanced air fume hoods with face velocities of 100 to 150 feet per minute.

Conserv-Air hoods obtain this high efficiency by drawing 100% of the exhaust air across the work surface. The current of air is controlled and directed, so that it sweeps out the entire work chamber.

Electrical services supplied: incandescent light and switch; motor blower switch; warning light; four 110-volt outlets; two 230-volt outlets.

Each assembly includes:

Superstructure
Dome
By-pass grill (specify color)
Duratek® work top w/cutout
PYREX® cupsink
Base unit
Electrical service panels (further description below)
Service fixtures — gas, air, and 2 cold water
Motor blowers must be ordered separately; recommended motor blowers are listed in the chart below.

More Special-Purpose Fume Hoods Available

Conserv-Air units specially designed to be explosion-proof or for the handling of radioactive materials or perchloric acid available

from stock. Contact your local Fisher branch for more information.

6-ft Auxiliary Perchloric

Fisher Safety-Flow™ Fume Hoods Offer Unique Advantages

Two models to choose from:
By-Pass model utilizes inside air for 100% of its exhaust air supply. **Auxiliary Air model** takes 50% of its exhaust air from outside and 50% from inside air. Results in incredible savings in air conditioning costs . . . up to 70% savings over cost with conventional fume hood.

New Double-Hung Sash Design
Never blocks auxiliary air even when fully open. By doubling over on itself as it opens, the new sash remains out of the auxiliary air flow, thus maintaining full operating efficiency. It also provides 50% more control over the "jet stream" across the face of the hood.

Choice of Three Sizes — Meets All Needs and Applications
New 5-foot wide unit joins standard 4-foot and 6-foot units. Over-all height on all sizes, 96 inches.

By-Pass Opening Eliminates "Jet Stream" Problems
As sash is closed, more and more air enters through by-pass and combines with air entering through face for a constant equalized flow. No jet stream to blow out flames or topple glassware.

Resistant to Heat, Chemicals, and Stains
Baffles and heavy sheet-steel superstructure are lined with tough asbestocite. Solid epoxy Duratek™ worktop is tempered and cured by high temperature bake.

Services Are Standard
Gas, air, water, vacuum, electrical fittings are standard with convenient front controls. Electrical services are UL approved and include vapor-proof lamp, light switch, motor-blower switch, 115-volt, and 230-VAC outlets. (Note: hoods with integral exhaust blowers do not have 230V outlets.)

Contempra™ Components
Base cabinets have full Contempra™ qualities of strength, durability, and design. They are standard Contempra cupboard units, made of heavy-gauge sheet steel finished in tough acrylic.

How To Order
The complete assembly for the By-Pass model consists of three parts: the basic assembly (superstructure with by-pass); the worktop; and the base unit. The complete assembly for the Auxiliary Air model includes the above items plus an appropriate deflector chamber. To convert a By-Pass model at any time to an Auxiliary Air model, simply order and install the appropriate deflector chamber. The table below provides all specifications and ordering information for each size of both models. Ordering one catalog number (the Assembly Number) will provide the necessary components for each size. For hoods using externally mounted motor-blowers, the recommended motor-blowers must be ordered separately. See recommended blowers in chart below.

Fume Hood	Assembly Cat. No.	Recommended Motor-Blower Exhaust	Supply	Includes: Superstructure No.	Worktop No.	Base Unit No.	Deflector Chamber No.	Duct Dia Supply	Exhaust

Gratnell modules: glass-clear answers to storage problems

Innovative Gratnell modules help you organize and store samples, specimens, apparatus, and supplies with the same ease with which you file papers. Plus provide the benefits of visual control and portability.

Articles stored in glass-clear polystyrene trays. These slide into handsome steel frames, which come in choice of 3 formats. TALL (about 2 meters H) for main storage. LOW (about 1 meter H) for under-bench storage. And MOBILE (low frames with wheels).

Frames slotted in 1" (25mm) intervals — you can position trays according to height of contents.

As alternate fittings, you can select basket trays (for autoclaving) or wood trays (for extra-heavy loads and chemicals).

All 3 types of easy-carry trays fully interchangeable. Same tray that is in tall frame in your preparation room or cold room or hot room . . . can be slid out and added to mobile module . . . wheeled to lab bench . . . even placed in low frame under bench. Only Gratnell design provides this "flow-through" storage.

Modules can be set up in any configuration you desire — wall, peninsula, island — and rearranged to meet changing needs. Frames packed flat for convenient storage and assembly via bolts. Can be enclosed on site with doors or panels, if you wish. Details below. Complete price list on opposite page.

Frames

Frames are 18-gauge steel tube, 1" (25mm) square, finished in white epoxy. Self-leveling feet. Available in single (about 0.5 meter) and double (about 1.0 meter) widths. Both widths are 0.5 meter front-to-back. Makes metric planning a cinch. Tubing on non-mobile modules is slotted on both sides. Thus you can suspend shelves between modules, forming additional modules at cost of shelving alone.

Mobile frames

Single width 91-630
Double width 91-631

Complete with 3¼" (76mm) nylon wheels and with ⅝" (16mm) chip-board top finished in white melamine. Top can be recessed to guard labware in transit. Unit 35½" (900mm) H.

Low frames

Single width 91-632
Double width 91-633
Unit 34½" (875mm) H.

Tall frames

Single width 91-634
Double width 91-635

Complete with crossbraces for rigidity, and brackets to fix units to walls or for back-to-back assemblies. Plus 16 shelf clips (for your own shelving). Unit 72" (1830mm) H.

Gratnell offers choice of modules:

tall, low, mobile

in choice of widths:
single,
double

Fittings

Rugged polystyrene trays, glass-clear, with rounded corners for hygiene and strength. Each 18"x18½"x3¼" (457x470x83mm deep). Holds 20 lb (10kg). Supplied with white nylon-coated steel slides that fit into patented slots in frames; empty slides cannot accidentally kick out. In 6-pack. **91-640**

Autoclavable basket trays of heavy-gauge steel wire with white nylon finish. Each 18"x17½"x5¼" (457x445x133mm deep). With slides. In 4-pack. **91-641**

Lacquered-wood trays for extra-heavy items and chemicals. Each 18"x18½"x2¾" (457x470x70mm deep). With slides. In 6-pack. **91-642**

Combination pack provides 2 clear trays, 1 basket tray, 1 wood tray, all with slides. **91-643**

Extra slides. Let you transfer trays without removing in-place slides from frames. Also provide ready spaces for trays. In 24-pack (12 pr). **91-644**

See-through plastic dividers, ½" (3mm) thick. Fit into clear trays via self-adhesive slots (supplied). In 12-pack. **91-645**

Single-width shelves, of ⅝" (16mm) chipboard finished in white melamine. Each 18"x18½"x⅝" (457x470x16mm). With clips. In 5-pack. **91-646**

Double-width shelves, to add to modules by removing center up-rights from double-width frames or by suspending between modules. Of ⅝" (16mm) chipboard finished in white melamine. Each 37¼"x

19"x⅝" (946x483x16mm). With steel support bars and clips. In 2-pack. **91-647**

Extra clips, for adding 10 or your own shelves. In 40-pack. **91-648**

Extra support bars, for use with 4 of your own shelves. With clips. In 8-pack. **91-649**

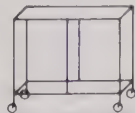

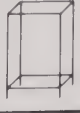

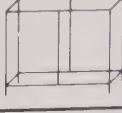

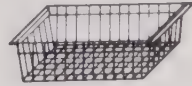

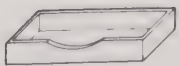

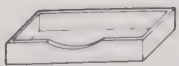

Door fixture set provides 2 handles, 2 magnetic catches, 2 pr hinges, 1 lock, and easy instructions. **91-650**

The line

All trays 100% interchangeable from module to module, whether you switch to tall frames, low frames, or carts. Please note that in our complete "pack-

ages", i.e., frames complete with trays, we base quantities on our standard packs, and allow ample room for vertical adjusting. Example: while tall

frame is 17 trays high, we supply 12. Note too that 4 baskets = 6 clear or wood trays in depth.

Fisher-Orsat Gas Apparatus

Removes gas components in absorption pipets . . . indicates volume change on buret

TYPE B

10-607

Type B: for analyzing CO₂, CO, O₂ in flue gases from gas, coal, and oil furnaces. Three pipets: two 10-642 Valve Bubbler Pipets and one 10-635 Plain Absorption Pipet with twisted copper strips — maintain cuprous condition of cuprous chloride solutions. Rubber expansion bag on each pipet protects absorbent from atmosphere.

Also with 10-755 Manifold, water-jacketed 10-705 Gas Buret, 2-972A Aspirator Bottle; three 10-675 Gas Bags, and 91cm 14-158 Rubber Tubing (4.8mm bore). Rugged hardwood case, removable doors.

10-607243.00

TYPE C

10-612

Type C: for CO₂, CO, O₂, H₂, and N₂ (by difference). With one 10-643 Valve Bubbler Pipet, two 10-642 Valve Bubbler Pipets, and one 10-630 Plain Absorption Pipet. All with expansion bags. Palladium tube connected to top of absorption pipet at left makes pipet a reservoir when gas passes through tube. Alcohol lamp provided to heat tube. Also: 10-760 Manifold, water-jacketed 10-705 Gas Burets, 10-680 Palladium Tube, 4-235 Alcohol Lamp, 2-972A Aspirator Bottle, four 10-675 Gas Bags, 91cm 14-158 Rubber Tubing (4.8mm bore). Hardwood case, removable doors.

10-612320.00

TYPE D

10-617

Type D: for CO₂, CO, O₂, H₂, illuminants, methane, ethane, nitrogen (by difference). With 5 pipets: two 10-630 Plain Absorption; two 10-643 Valve Bubbler; one 10-655 Slow Burning (with transformer, switch, rheostat, control panel). All have expansion bags. Also: 10-765 Manifold, water-jacketed 10-715 Gas Buret, two 2-972A Aspirator Bottles, four 10-675 Gas Bags, 183cm 14-158 Rubber Tubing (4.8mm bore), and transformer assembly. In hardwood case with removable doors. For 115V 50/60Hz.

10-617408.00

With two 10-645 Bubbling Pipets instead of 10-643 Valve Bubbler Pipets.

10-616408.00

TYPE EF

10-622

Type EF: purity of cylinder gases (directly or by difference); also analysis of gases containing less than 3% or more than 97% of reactive components. With one 10-645 Bubbling Pipet and 3-way stopcock, 10-770 Manifold, water-jacketed 10-737 gas buret, 2-972A Aspirator Bottle, 10-675 Gas Bag, and 91cm 14-158 Rubber Tubing (4.8mm bore). In hardwood case with removable doors. Carrying handle.

10-622180.00

For 14-158 series rubber tubing, see p 1202.

For 4-236 alcohol lamp, see p 121.

Fisher-Orsat Parts Stocked at Your Closest Fisher Branch

Replacement Gas Burets

10-705 For Type B and C Orsat Apparatus

Precision bore. 100ml capac with bulb at top. Lower Schellbach part graduated 0 to 50ml in 0.2ml div. Without water jacket.

10-70527.25

10-715 For Type D Orsat Apparatus

Straight-type. 100ml capac graduated in 0.2ml div and numbered up and down. Measure any % of absorption; additional air, oxygen, or oxygen-nitrogen mixtures measured also.

Without water jacket.

10-71523.75

10-737 For Type EF Orsat Apparatus

Precision bore. 100ml capac; ungraduated 94ml bulb in middle. Upper and lower stems each 3ml graduated in 0.05ml. Purity or impurity of cylinder gases read directly in % from 0 to 3% and from 97 to 100%. Without water jacket.

10-73727.50

10-741 Replacement Water Jacket

Accommodates 10-705, 10-715, or 10-737 Gas Burets. Glass with two 1-hole rubber stoppers

10-7416.50

10-705

10-715

10-737

10-741

Replacement Gas Pipets

Glass . . . 2-compartment . . . fit all Fisher-Orsat apparatus

10-630

10-630 Plain Absorption Pipet

Glass tubes in absorption compartment to increase absorption area.

10-63027.00

10-655 Slow-Burning Haldane-Type

Heating coil and copper wires sealed into glass protecting tube; held by rubber stopper. Requires 2 to 3amp at 6V. Use 2-972A Aspirator Bottle.

10-65531.25

Heating Coil

Replacement for 10-655 Gas Pipet.

10-66524.00

10-635

10-635 Plain Absorption Pipet with Copper Strips

Specially for use with cuprous solutions . . . strips react with solution, maintaining cuprous condition. Glass tubes increase absorption area.

10-63529.00

10-640 Absorption Pipet with Outlet at Bottom

Both chambers can be drained by removing rubber stopper at bottom. Add new solution without removing pipet from apparatus. Glass tubes or copper wires can be inserted if desired. With solutions that attack rubber, coat stopper with paraffin.

10-64018.75

10-642

10-642 Valve Bubbler

Automatic ball valve eliminates need for Babb stopcock to control gas flow. Valve closes when gas is forced into pipet . . . opens when gas is drawn back to buret. When gas is removed and absorption liquid brought up to surround ball, valve closes, ready for next pass of gas.

Row of pinholes at bottom directs gas upwards. Borosilicate glass.

10-64229.75

Valve Bubbler with Stopcock

For use on apparatus where stopcock not provided on manifold. Otherwise, same as 10-642.

10-64331.50

10-652

10-652 Fisher-Tramm Pipet

Washes gas sample when it enters pipet and again when it leaves. Liquid trap at top keeps absorbent from being carried into manifold. Works automatically without valves.

10-65231.50

Bubbling Pipet

Tube extends into absorption compartment, so gas bubbles up through absorbent. Three-way Babb stopcock; (1) seals pipet; (2) connects bubbling tube; (3) connects with both pipet and bubbling tube so gas can be withdrawn from both at same time.

10-64531.50

Accessories for Orsat Gas Apparatus

Manifolds

Heavy capillary glass tubing. Stopcocks designed just for gas analysis . . . small bore, standard taper. Each manifold has 3-way stopcock at inlet plus 2-way stopcocks and plain connections for bubbling pipets as indicated below.

10-755 For Type B Apparatus: three 2-way stopcocks only.

10-75549.00

10-760 For Type C Apparatus: three 2-way stopcocks; 1 plain connection.

10-76051.00

10-765 For Type D Apparatus: three 2-way stopcocks; 2 plain connections.

10-76553.00

10-770 For Type EF Apparatus: 1 plain connection only.

10-77016.75

2-972A Aspirator Bottle

Oxygen Indicators

Fast check of oxygen levels
0 to 5% and 0 to 25% ranges

10-789-50

Test atmosphere to ensure safe breathing conditions . . . check air leakage into oxygen-free systems . . . monitor pure oxygen streams, atmosphere in oxygen tents. Instruments need no warm-up. Fast response and good results. Efficient, self-generating, temperature-compensated, membrane-type electrolytic cells, and direct-reading meters. Accurate to $\pm 0.1\%$ over 0 to 5% range . . . $\pm 0.25\%$ over 0 to 25%.

Safe and easy to use. Calibrate in fresh air by twist of knob. Samples obtained by means of aspirator bulb.

FM-approved for use in Class 1, Division 1, hazardous areas as specified by the National Electrical Code.

Ordering Information

Single-Range Oxygen Indicator. Measures O_2 over 0 to 25% range. Widely used to determine safe breathing conditions in confined spaces, in compliance with OSHA standards.

10-789-50215.00

Dry Oxygen Test Cells. Replacements. For 10-789-50 and 10-789-52 Indicators.

10-789-53106.50

Dual-Range Oxygen Indicator. Full-scale deflections over 0 to 5% and 0 to 25% ranges. Solid-state amplifier powered by two 9-V mercuric oxide batteries.

10-789-52326.00

Reactivation Kit. Restores effectiveness of 10-789-53 test cell.

10-789-5419.20

Portable Indicator

For CO_2 , hydrogen, sulfide, sulfur dioxide, nitrogen dioxide, chlorine gas

10-860

Hand-held sampling pump has scales and calibrated indicator tubes. Length of stain indicates concentration. No color comparison charts or calibration curves. Safe for flammable gases.

With pump, scale, 12 indicator tubes and 6 caps, carrying case.

Gas Hazard Indicator

Gas	Range	Cat. No.	Ea
H_2S	0-650ppm	10-860	105.50

Monoxor Detectors

For carbon monoxide

Air sample drawn through tube of indicator gel. If stain shows after 1 pump stroke, CO concentration is 300ppm or higher. Stain after 2 strokes, 100-300ppm. No stain after 2 strokes, less than 100ppm. Partially stained gel can be reversed, used again. With pump, scale, pocket clip, 12 indicator tubes, 6 caps, carrying case.

Gas Absorbing Reagents

Potassium Hydroxide Solution

For determination of carbon dioxide, sulfur dioxide, sulfur trioxide, hydrogen sulfide, chlorine. Qt (946ml) bottle.

So-P-226Ea/10.41
Case of 6/42.06

Cuprous Chloride Acid

For determination of carbon monoxide. Qt (946ml) bottle.

So-C-162Ea/18.90
Case of 6/84.60

Cuprous Chloride Alkaline

For determination of carbon monoxide and acetylene. Qt (946ml) bottle.

So-C-164Ea/25.20
Case of 6/116.10

Sodium Hydroxide Solution

For determination of carbon dioxide, sulfur dioxide, sulfur trioxide, hydrogen sulfide, chlorine. Qt (946ml) bottle.

So-S-286Ea/8.97
Case of 6/34.86

Cuprous Sulfate Beta-Naphthol

For determination of CO. Qt (946ml) bottle.

So-C-166Ea/30.20
Case of 6/141.00

Pyrogallate Absorption Alkaline Solution

For determination of O₂. 580ml of 45% KOH and 25.2g of Pyrogallol.

P-395Ea/17.90
Case of 6/79.50

CO₂ or O₂ Analyzers

10-884

Fyrite Gas Analyzers give accurate readings within 1/2 of 1% CO₂ or O₂ up to 538°C. Less than 1 min/test. Readings unaffected by most other gases.

Sample pumped into apparatus with rubber bulb. Absorbing liquid picks up all gas to be measured. Level of fluid column shows %CO₂ or O₂. . . read from scale opposite.

Ordering Information

CO₂ Fyrite Analyzer. 0-20% range. With fluid, aspirator, filter, carrying case.
10-88470.10

O₂ Fyrite Analyzer. 0-21% range. With fluid, aspirator, filter, carrying case.

10-884-1072.10

Refill Kits. For 10-884 and 10-884-10 analyzers. Includes 2 bottles fluid, valve plunger, filter.

Gas	Cat. No.	Ea
CO ₂	10-884-5	7.25
O ₂	10-884-15	12.30

Coat your reagents

A Fisher First: reagents in Safe-Cote™. Each 5-pt glass bottle is coated with tough impact-resistant see-through plastic film. You get benefits of glass (chemical purity, optical clarity). **But oh-what-safety.** Should someone drop a bottle, glass fragments and reagent are trapped inside plastic "shield." No lacerations. No burns. And no messy cleanup.

Bottles have dripless pour ring, grip, and color-coded polystyrene screwcaps Six to a case, individually packed in heavy corrugated board with polystyrene foam sandwiching.

Reagent	Cat. No.	Per case 6x5 pt
Acetic Acid, glacial, ACS	A-38S	52.00
Ammonium Hydroxide, ACS	A-669S	26.04
Hydrochloric Acid, ACS	A-144S	32.10
Nitric Acid, ACS	A-200S	39.00
Sulfuric Acid, ACS	A-300S	36.60

In stock at your Fisher Branch.

Fisher Model 2400 Gas Chromatograph

Dual-column systems with choice of detectors . . . High performance at low cost.

Versatile GC systems for routine industrial quality control analyses or clinical lab work. With modern digital temperature control circuitry to ensure reproducible temperature settings over ambient to 400°C. Reproducible heating rates too — 0.5, 1, 2, 4, 8, 10, 12, 15, and 20°C/min. High retention time repeatability. Precise, reliable chromatograms.

Built-in "operational mode selector" enhances programming flexibility. Programmer either acts as isothermal proportional controller, holds final temperature indefinitely, or allows oven to cool without interference (ballistically). Optional solid-state, Isothermal Proportional Temperature Controller provides close oven control to $\pm 0.5^\circ\text{C}$.

Large, nearly 22,000cm³ oven provides plenty of column space. Holds two 3.2mm dia x 18mL or two 6.4mm dia x 9mL columns, or special columns. Maintains temperatures well.

Inlet system includes either 3.2 or 6.4mm OD stainless-steel injection ports for flash vaporization. Converts easily to true on-column injection system by inserting column to within 6.4mm of septum. Each port is well insulated. Temperature control is convenient rotary step switch, graduated in 50° increments. Indicator lamp monitors injector zone temperature.

Order Model 2400 with gas sampling valve also, for direct stream sampling in flue or furnace gas analysis. Or, add it later. Easy to install. Model 2400 adaptable to accommodate Fisher Pyrolyzer system. Versatile, highly repeatable.

Choose from several detector systems. Either dual Flame Ionization, Wide Range Electron Capture or dual Thermal Conductivity Detectors. FID responds to less than 50ppb, for many hydrocarbons . . . negligible drift and low noise. Wide Range ECD (see

11-100-003 on p 444) extends linear dynamic range to 5 or 6 decades of sample concentrations. Requires no specific radioactive material license. TCD are either filament or thermistor type and very rugged. Large oven in Model 2400 lets you use two detectors simultaneously. Split effluent FID, ECD display or combined TCD, FID, for example.

Most useful in 2400 FID system is solid-state Dual Channel Electrometer (DCE). With several operational modes, DCE is sensitive to 1×10^{-12} afs and provides versatility practically unequalled. And, it's standard equipment.

Model 2400 output is 1 and 10mV for strip chart recorders. 1 and 10V for computer/integrator terminals.

Recordall® Recorders . . . Great Companion for Model 2400

One and two-pen recorders for use with Model 2400 Gas Chromatographs. Both models have 11 chart speeds (0.1, 0.2, 0.5, 1, 2, 5, 10"/min; 1, 2, 5, 10"/hr) and 5 input spans (1, 10, 100mV; 1, 10V) Full scale accuracy, $\pm 0.3\%$. Repeatability, $\pm 0.1\%$.

Operate on 110 or 230V. Remain unaffected by line frequency power fluctuations, or changes in temperature/humidity. Need no lubricating. All parts easily accessible. For more information, see p 1007.

No. Pens	Chart Speeds	Spans	Cat. No.	Ea
1	11	5 (1mV and up)	13-939-10	585.00
2	11	5 (1mV and up)	13-939-20	975.00

(Contd. on next page.)

Wide Range Electron Capture Detector

For Model 2400 Gas
Chromatograph

Extends linear dynamic range of Fisher Model 2400 Gas Chromatograph or other GC systems to 6 decades of sample concentration for SF₆ and 5 decades for common chlorinated pesticides. Enables wide-range analysis in a single uninterrupted run.

Stainless-steel detector block contains scandium tritide electron capture cell. Automatic proportional controller with platinum resistance sensor maintains block at dial-set temperature from 150° to 320°C within ±0.1°C.

Pulsed output usable for continuous wide-frequency-range digital monitoring. Analog output of 0-10mV, derived from built-in frequency-to-current converter, will drive linear chart recorder directly.

Ordering Information: Detector block module has inlet and exhaust connections for joining to column and venting. Separate control module has simple adjustment dials for setting detector temperature, baseline, recorder output sensitivity. Accessory is self-contained, needs no external power supply unit or signal-processing electrometer amplifier. Doesn't require specific radioactive material license. (State of North Carolina requires general license.) 120V 60Hz, 50w.

11-100-0032250.00

Fisher Model 1200 Gas Partitioner™

Analyzes complex gas
mixtures in a single step

Even combinations of fixed gases and short-chain hydrocarbons take only a few minutes with Fisher Model 1200 dual-column, dual-detector gas chromatograph.

Just by changing chromatographic columns, you can analyze for atmospheric pollutants, or perform pulmonary function studies. Vary column materials slightly, and unit is capable of analyzing reactive gas mixtures, including those containing hydrogen, nitrogen oxides, ammonia, hydrogen sulfide, sulfur dioxide.

Ordering Information: With 11-127-30 Bubble Tower Assembly, 11-127-15 Drying Tube Assembly, 11-128-10 Standard Column Assembly, 10-560-55 Recorder Cable, 7-578-4A Indicating Drierite, and 5 Injector Septums. 72Lx38Wx46cmH.

For 120V 50/60Hz

11-128 2500.00

For 240V 50Hz

11-128-1 2500.00

Just a few of the many outstanding new advantages of Model 1200:

Direct digital thumbwheel temperature dial

Set desired oven operating temperature to nearest 1°C. Accuracy is ±2° throughout range.

Heated injection port

Handles liquid samples with boiling ranges up to 250°C.

Extra large 15,700cm³ oven

Holds longer than normal columns, valves and tubing with enough space left over for adding auxiliary equipment to meet individual application requirements.

Forced air oven

Operates to 200°C. Fully proportional solid-state controller keeps temperatures constant (±0.5°C) throughout all stages of analysis.

NOTE: Model 1200 and its accessories are fully described in new bulletin. For your copy, check No. 10 on reader service card at end of blue index pages.

Accessories for Model 1200 GC

Indicating Drierite®

For internal and external drying tubes. 10/20 mesh.

7-578-4A454g (1 lb)/2.00

7-578-4B.....2.3kg (5 lb)/7.50

Leak Detector Solution

In 6-oz (177ml) applicator bottle.

LecturSphere™ Gas Bottles

Hold 4 times more gas than standard lecture bottle

10-598

Harmless when dropped
Greater stability than
top-heavy cylinders

Wide selection of reagent gases furnished in stable, metal-based container. Excellent for high school, college, and industrial lab benches. Spheres have no demurrage and are refillable.

If regulator is accidentally severed from LecturSphere™ bottle, a safe spinning action occurs rather than disastrous rocketing effect of cylinder. Extensive drop testing has proven this safety feature.

High-grade steel sphere permanently attached to metal base. Leak-tested to 265kg/cm². Tool steel gas outlet, outlet plug and on-off valve with built-in safety relief valve. Clearly marked and color-coded. Female threaded to accept 5/16"-32 regulator and needle valve fittings. 20Hx15cm dia. 2.5kg.

Accessories for LecturSphere™ Reagent Gases

10-599-28

Two-Stage Regulator

General purpose, precision regulator for non-corrosive gases. Variable delivery pressures: 0-.7, 0-3.5, 0-7kg/cm² with 211kg/cm² maximum inlet pressure. Nickel-plated brass. With gauges, standard 5/16"-32 inlet/outlet connections and safety relief valve. Can be adapted for CGA fittings.

10-599-28.....85.50

10-599-7

Single-Stage Regulator

For all 10-598 gases except 10-598B (ammonia), 10-598G (chlorine), 10-598M (hydrogen sulfide), and 10-598V (sulfur dioxide). Variable delivery pressures: 0-.7, 0-3.5; 0-7kg/cm² with 211kg/cm² maximum inlet pressure. Nickel-plated brass, neoprene diaphragm. Inlet is 1/4" FNPT and may be adapted to CGA fittings or 5/16"-32 LecturSphere™ swivel connection. Outlet is 1/8" FNPT with fittings available

10-599-26.....63.60

Extension for 10-599-26 Regulator

Brass extension modifies 10-599-26 for use with 10-598 LecturSphere™ bottle. Allows 10-599-26 to clear curved side of LecturSphere bottle.

10-599-7.....Pk of 3/18.35

Chemodular® Needle Valve

For 5/16"-32 female threaded cylinders. Precisely regulates flow rate throughout range. Popular where low flow rates are desired. Handles inlet pressures to 70kg/cm². Needle cartridge easily replaced without breaking flow connection. Chrome-plated brass. Teflon® packing. Viton-A O-rings. Standard 8/16"-32 inlet/outlet connections. 38Lx19Wx57mmH.

10-599-32.....18.50

10-599-32

Stainless-Steel Chemodular® Needle Valve

Same as 10-599-32 except with 316 stainless-steel construction.

10-599-34.....36.00

Two-Stage Regulator for Corrosive Gases

For gases 10-598B (ammonia), 10-598G (chlorine), 10-598M (hydrogen sulfide), and 10-598V (sulfur dioxide). Provides precise gas control while maintaining gases in ultra-pure state. Gauge not included. Outlet is 5/16"-32 with fittings available. Inlet is 1/4" FNPT with CGA and LecturSphere connections available. Following variable delivery pressures provided: 0-.7, 1-3.5, and 0-7kg/cm².

10-599-30.....170.00

10-599-30

Replacement Needle Cartridge for 10-599-32 and -34 Valves

For use with 10-599-32 brass, nickel-plated, and 10-599-34 stainless-steel Chemodular® needle valves. Allows easy replacement of worn needle valve parts without breaking flow connections.

Double Alert

It's **two-way** fire protection with these rugged all-steel Fisher cabinets for volatiles and flammables. Should a chemical fire start in the **cabinet**, flames are harmlessly contained. Should a flash fire start in the **lab**, flammables remain protected within cabinet walls.

See p 1038 for complete ordering information.

Gas Pressure Regulators

Lecture Bottle Regulator

UL approved. Controls pressure of non-corrosive gases over 0-7kg/cm² range. Rugged solid brass body withstands shock and abuse. Solderless construction is easy to disassemble. With 1/8" NPT angle needle valve for fine adjusting. Flow capacity to 28,000 liters/hr. Working pressure of 7.4kg/cm², cylinder pressures to 210kg/cm².
10-569.....40.50

Flowmeter Regulator

For argon, CO₂, helium, hydrogen, nitrogen, and oxygen

Accuracy to ±5% in flow regulation of argon, CO₂, helium, hydrogen, nitrogen, and oxygen with precision flowmeters. Needle valve allows sensitive adjustment at low flow and rapid adjustment for high-volume. Strong,

one-piece forged body protects against damage, reduces repairs, ensures temperature stability. Sintered inlet filter minimizes damage and contamination from dust, dirt, or tank scale. Tough plastic flow tube gauge is durable, easy-to-read over a 240° arc. Solderless construction is easy to take apart for repairing. With recessed, protected, tank pressure/volume gauge.

10-569

10-570

Multi-Stage Cylinder Regulators

Delivery range to 7kg/cm²

UL approved, precision model multi-stage cylinder regulator. Solid forged brass body houses two regulators. Safety stage with strong 25mm stainless-steel diaphragm reduces full cylinder pressure 90%. Second-stage with 89mm diaphragm allows accurate, sensitive delivery of reduced pressure. For safe use of regulator, unit includes high pressure valve and back cap vent holes, intermediate pressure relief valve between stages, low pressure valve, burst hold in diaphragm back-up plate, and bonnet vent holes. Sintered inlet filter minimizes regulator damage by eliminating rust, scale, and dirt from gas stream. Solderless construction for fast, easy servicing.

Gas Needle Valves

Blunt-Form Brass Needle

Regulates compressed air and vacuum lines with this needle valve. Blunt-form needle has wide throat for full flow. Solid machined brass with packing gland to prevent leaks. Threads are 1/4" male IP. FISHERbrand®.

10-582Ea/7.55
Pk of 3/16.95

10-582

Blunt-Form Stainless-Steel Needle

Needle valve with stainless-steel needle. Otherwise similar to 10-582. FISHERbrand. 10-583Ea/7.55
Pk of 3/16.95

"V"-Shaped Stainless-Steel Needle

Needle valve gives precise control of small gas flows at high pressure. Needle is "V"-shaped stainless-steel seated in a small aperture. Threads are 1/4" IP. FISHERbrand. 10-5847.55

Gas Cylinder Handling Equipment. See Safety Section, p 1046

Gas Drying Apparatus. See 9-205 through 9-210A, p 280

Gas Washer Bottle. See 7-513, p 205

Small Capacity, Stainless-Steel Needle

Small capacity version of precision control needle valve has 1/8" IP threads, stainless-steel needle, and solid machined brass body. Permits same close control possible with 10-584. 10-5874.95

Stainless-Steel, for Corrosive Gases

Stainless-steel needle valve regulates flow of ammonia and other corrosive gases at high pressure. Non-corroding valve has full-floating spindle for perfect seating, hardened chrome steel spindle point and thread glands for preventing gas leakage. With 1/4" IP threads. FISHERbrand. 10-58817.00

Brass Hose End

Attach rubber or flexible metal tubing to all needle valves except 10-587. With 1/4" IP female threads and serrated hose connection. FISHERbrand. 10-591Pk of 6/18.00

FISHERbrand® Gauges

For pumps and vacuum lines

Have continual check on vacuum pumps and laboratory or industrial vacuum lines by installing FISHERbrand vacuum gauges.

These gauges employ principle of aneroid barometer. Metal tube (Bourdon tube) or diaphragm expands or contracts in proportion to pressure on it, and moves meter needle.

FISHERbrand gauges have drawn steel case and ring, enamel finish, polycarbonate movement, and 1/4" male NPT vacuum connection.

Bourdon Gauges

FISHERbrand Bourdon Gauges use phosphor-bronze Bourdon tube to read vacuum in 0-762mmHg range. Accuracy is ±2% in mid-range, ±3% at extremes. Vacuum connection has T-handle gauge cock. Two sizes.

11-279A (6.4cm dia).....11.00
11-279B (11.4cm dia).....15.50

Diaphragm Gauges

(Ordering information, table at right)

Use these for 703g/cm², 25.4cm water range where Bourdon gauges are not practical. Accuracy is ±1% in mid-range, ±2-3% at extremes. Diaphragm is phosphor bronze. Serrated 1/4" NPT vacuum connection on bottom of gauge. 6.4cm dia.

Microtector® Manometer

Portable electronic gauge
Accurate to $\pm 6.35\mu\text{m}$ water

Dwyer Microtector® is portable electronic gauge with which you can measure positive, negative, or differential pressures to $\pm 6.35\mu\text{m}$ water column (WC) over range of 0-5.1cm WC. This high accuracy allows you to use gauge to calibrate other instruments. With accessory pitot tube (*special order*), you can measure low air velocities precisely.

Manometer U-tube is bored in block of clear acrylic plastic, securely mounted on 12.7mm thick steel base. Manometer fluid is distilled water containing small amount of green fluorescein dye. Use leveling screws and bubble level to make base of "U" precisely horizontal.

Connect left side of manometer to system under pressure, fluid rises in right bore. (Connect vacuum system to right side of Microtector.) When fluid touches "hook" electrode in bore, meter is actuated. Use micrometer screw to retract hook, then advance it again until meter shows new contact. Average of several readings gives height of column. Double height for pressure.

Meter is powered by 1.5V penlight battery (supplied). Solid-state integrated circuits. AC detector minimizes fouling and erosion of hook electrode. Micrometer calibration is traceable to National Bureau of Standards master.

Ordering Information: Microtector comes with 22ml green fluorescent dye; two 91cm lengths of Tygon tubing; two $\frac{1}{8}$ " pipe thread adapters; micrometer wrench; electrode cleaning cloth; and battery, in enameled sheet-steel case with latches and carrying handle.

11-287-15 164.00

11-284

Cork and Rubber Stopper Gauge

Determine cork and rubber stopper size quickly with 15cm plastic (blue vinyl) gauge. Place gauge into mouth of flask, bottle, or tube, read size directly on appropriate scale.

11-284 Ea/1.30
 Pk of 10/10.90

Closed-End, Bennert-Type Vacuum Manometer

FISHERbrand. One arm of U-tube is closed and completely filled with mercury. Vacuum connection is made to other arm. When pressure is too low to support column of mercury, it begins to fall in tube. The movable scale is used to measure height of column.

Unit has scale graduated from 0 to 120mm on both sides of central zero. Difference between levels of two mercury columns measures vacuum applied to gauge.

Heavy-wall glass manometer tube has constrictions to prevent mercury surge from breaking glass if vacuum is unexpectedly broken.

Ordering Information: Each manometer is evacuated and shipped filled with mercury, held by stopcock. Glass parts mounted on wooden back and base.

11-292 66.00

11-292

McLeod Vacuum Gauge

10-269-27

Replacement gauge for Labconco freeze dry equipment. Range, 5×10^{-3} to 5 Torr. Borosilicate glass tubing with permanent fused scale. In rack-type frame. Without mercury (see M-141 in Chem. Index).

10-269-27 150.00
 (Labconco 75850)

McLeod Gauge Filter

Protects McLeod gauge from dust and other contamination.

Borosilicate glass bulb filled with fiberglass. Uses 7.9 IDx4.8mm wall rubber tubing to connect filter to gauge.

10-269-28 7.00
 (Labconco 75851)

Manometers with Closed Tube Inside Outer Tube

PYREX® with Easy-to-Read Graduations

Compact gauge consists of manometer tube enclosed in round-bottom, graduated jacket and sealed to $\frac{1}{8}$ stopcock plug. Plug vents outer jacket through "T" side arms in neck. Easy-to-read red scale graduated from 0 to 160mm in 1mm divisions. Mercury is placed in inner tube and in jacket bottom to measure pressure differential. H, 235mm.

Ordering Information: With instructions; without mercury.

11-289Ea/26.85
(Corning 6952) Case of 4/96.68

11-289

Closed-End Manometer

Same as 11-288, except for bench mounting

Enclosed in glass jacket, with metal base (13cm dia) and 6.4mm nipple connections. Inner tube is filled with mercury and open to chamber. Scale is graduated upward and downward from center zero (1mm divisions). Absolute pressure is sum of readings for both columns.

Ordering Information:

Shipped filled with mercury, ready to use, but sealed with plunger to prevent loss. Constriction in manometer checks mercury surge if vacuum is broken suddenly.

11-28768.00

11-287

PYREX® Brand Vacuum Manometer

All-glass manometer for use on Flexaframe® lattice. Inner tube, integral with $\frac{1}{8}$ stopper, contains mercury. When you apply vacuum to side arm on outer tube, mercury level falls until air and mercury pressures equalize. Read height of mercury column on 0-160mm scale graduated in 1mm divisions.

Ordering Information: Without mercury.

11-288Ea/25.35
(Corning 6950) Case of 4/91.28

11-288

Inclined-Tube Manometer

Magnifies scale readings

Very small vertical displacement of manometer column is transformed into large scale reading with an inclining indicating bore and low-density fluid. Measures low pressures and small pressure differences with high accuracy.

Portable Differential Manometer has 20cm inclined scale with 0.01" divisions, reading from 0.20" to 0 to 2" (=5.1cm) of water (WC). Readings are accurate to ± 0.002 " WC.

Manometer tube is bored in clear plastic block, with scale mounted on back and quick-shutoff screw plug connectors on both vertical

and inclined arms. It uses clearly visible red gauge oil (0.826 specific gravity), and has leveling screw, bubble level, and magnetic mounting clips.

Ordering Information: Comes in steel carrying case, with 274cm of rubber tubing and terminal probe for measuring static pressures in fume hoods and ducts, and extra bottle of gauge oil.

11-295-570.00

Red Gauge Oil (0.826 SG) for 11-295-5 Differential Manometer.
So-G-79Pint (473ml)/3.60

11-295-5

Manometers

11-290

Flex-Tube™ Well-Type Manometer

High-pressure arm of manometer is expanded into well and low-pressure arm reduced, so there is negligible displacement of well surface and magnified rise in low-pressure column. You read height on fixed scale without having to adjust zero. General-purpose laboratory/industrial manometer.

Ordering Information: Enamel-finish 7x3.8x39cmH with 8" scale (0.1" divisions). Has two rapid-shutoff molded nylon connectors, two 91cm lengths of Tygon tubing, two 1/8" pipe thread adapters, and vial of fluorescein concentrate and wetting agent to increase visibility of meniscus. Twelve oz (355ml) of instrument-grade mercury are required but are not supplied. (See M-141 in Fisher Chemical Index.)
11-29030.00

11-286A

Mercury Manometers

FISHERbrand®. Reversible aluminum scales are graduated in centimeters (1mm divisions) and inches (0.1" divisions). You can set zero on one meniscus, read height of mercury column directly. Heavy glass U-tube and scale are mounted on board for use on bench or wall. Both ends of tube ribbed for hose connections. Without mercury.

With single-neck 250ml flask and 1 funnel with glass stopcock

Same as 11-300 kit except the 250ml round bottom boiling flask (Corning 4320) has single-neck and funnel with glass stopcock (Corning 6382A).

11-300-50Case of 1/113.24 (Corning 6949)

Glass Blowing Kit

Essential for making and repairing glass apparatus systems and glass-to-metal seals

Lets you repair apparatus, modify glass systems, make up special configurations inexpensively and quickly.

Kit includes a Spandle (useful tool for making tubing butt-seals, "T" and "V" joints. Also capillary joining and ring seal work). Spandle consists of two tubing vices held by common handle. Vices adjust to hold tubing firmly at any relative angle.

Kit also includes safe, no-flashback S-G-O hand torch which produces wide range of efficient flames using oxygen with propane, butane, natural, city, and hydrogen gases.

Ordering Information: With asbestos work board, hot-glass rest, S-G-O hand torch, torch stand, blow-hose (with 2 extra mouthpieces), Spandle, graphite flat, twin tubing, didymium goggles, vernier calipers, tungsten carbide knife, graphite hex, assorted corks, asbestos paper, graphite rods (2 sizes), wire screen (3 pieces), tweezers, ruler, brass shaper, beeswax, tungsten tool, sodium nitrite, pluro-stopper, box, and *Manual of Simplified Glass Blowing*. Shp wt, 14kg (30 lb).

11-349-51350.00

11-349-51

Fisher Hot-Wire Cutter

Fast . . . accurate . . . dependable

11-313

Hot-Wire Cutter cuts glassware up to 19cm dia (watch glasses, tubing, small plates, cylinders) safely and quickly. Application of controlled thermal shock reduces hazards of broken and splintered glass, makes a smooth even cut. Heat is induced through a Chromel heating wire and regulated by an integral transformer. Arc shape of wire is variable, to accommodate different glassware, by moving adjustable slide arm. To cut glass, simply score along entire circumference with 11-347 Tubing Knife. Place glass on cutter so that score mark is aligned with cutting wire, and rotate slowly. Heat cracks glass slightly and separation proceeds around piece when turned. Cutter works equally well with borosilicate or soft glass.

Ordering Information: Supplied with 6 Chromel cutting wires, but without 11-347A tubing knife (see next page). 115V 50/60Hz.

11-313158.00

Fine, durable Chromel cutting wires for 11-313 Cutter.

11-314Pk of 12/1.25
Case of 120/11.25

Tubing Cutter

Tubing easy to break after one stroke with this fine tubing cutter. Blade is 8.3cm, solid Kennametal (tungsten carbide) with two serrated edges for efficient cutting. Blade securely fastened to aluminum handle. Entire cutter resists rust and corrosion.

11-348-446.75

11-348-4

Glass Cutters

Diamond-Tip Cutter

11-315

Diamond can be re-set. Rack can be used to crack single or double strength glass. Metal parts are nickel-plated brass set into a maple handle.

11-31531.90

Carbide Wheel Cutter

11-326

Cut borosilicate glass easily. Wheel is simple to change.

11-3267.25

Table-Mounted Cutter

11-330

Cut glass tubing from 5 to 40mm. Press handle down while rotating glass. Steel wheel gives smooth cut.

11-33072.00

Griffin-Type Cutter

11-340

Cuts glass tubing up to 40mm. Simply insert tubing, hold spring-loaded cutting arm down, and rotate cutter around tubing. Steel wheel makes a fine cut. Zinc alloy cutter is strong and resists corrosion.

11-3404.20

Steel cutting wheels for 11-330 and 11-340 Glass Cutters.

11-345Pk of 12/7.50

Tubing Scorer

Low-priced glass tubing scorer is steel with saw-tooth edge. Priced to be expendable. 7.6cmL. Jar of 250.

11-348-8Jar/8.35

11-348-8

Handi-Hold™ Knife

11-348-6

Has high-tempered steel blade with two saw-toothed edges for good cutting. 7.6cm blade mounted in durable plastic handle.

11-348-65.00

Tubing Knife

11-347A

Scores soft or borosilicate glass tubing before cutting on 11-313 Cutter. Fine 25mm edge of durable, rustproof tungsten carbide is welded to a solid shank of stainless steel. With wooden handle.

11-347A13.15

Tapered Carbon

Shape glass tubing with hexagonal tapered carbons. Bottom is tapped for an 11-348-33 handle. 150mmL.

Fits Tubing I.D.	Cat. No.	Ea
1-15mm	11-348-30A	21 50
10-25	11-348-30B	17 50

Handle for 11-348-30 series glass tubing shapers. 14cmL.

11-348-339.50

11-348-30

Electric Glass Cutter

Rapid, efficient, electric glass cutter reduces work load for labs cutting large amounts of rod and tubing. With interchangeable steel and silicon carbide cutting wheels to handle glass, porcelain, and silica. Produces fine scoring around tubing for smooth, even breaks.

Cutter accommodates all tubing sizes from smallest to largest. Borosilicate glass to 13mm OD or soft glass to 19mm OD can be scored all around then snapped apart. Larger tubing of all types is scored around then held at one point on the line against the cutting wheel. Heat generated breaks tubing evenly on the line. Sliding carriage with gauge adjustable for desired tubing length ensures accuracy of cut.

Ordering Information: Top of strong, chemical-resistant, cadmium-plated steel. Sides are steel, finished with protective gray hammertone enamel. With storage rack for extra-cutting wheels. Supplied with one steel, one silicon carbide wheel. Operates on 115V 60Hz, draws 500 watts, weighs 20kg (45 lb).

11-346-5221.00

Silicon carbide cutting wheel for silica and porcelain. Fits 11-346-5.

11-346-65.50

11-346-5

Standard Wall Tubing Bundle of Assorted Sizes

From 3 to 12mm OD. PYREX brand. Convenient bundle of popular size tubing in 1.2m lengths. Same wall thicknesses and tolerances as 11-365 series (Corning 234990). Each bundle contains:

No. of Tubing Pieces	Tubing O.D.
18	3mm
21	4
31	5
27	6
26	7
22	8
18	9
18	10
16	11
19	12
11-366-10	Case of 25 lb (11.3kg)/73.75

For
art's
sake

Chemical template to expedite drawing structural formulas. Simplifies tracing structures. Rugged plastic stencil, precision-cut. Works beautifully with pencil, ball-point, special drawing pens. Provides 27 different shapes. Plus protractor, handy millimeter rule. A lifetime tool for \$6.40. Catalog No. 14-433-14.

Standard Wall Tubing (57 to 100mm OD)

Same as 11-365 series tubing but in larger sizes. Wall thickness, 2.4mm. Tolerance on wall, ±0.3mm. 4 pieces per

case. In 1.2m lengths. Case prices based on average lb/case. PYREX brand. (Corning 234570-4900, 234000)

Glass Tubing, Contd.

Rod in Assorted Sizes

Consists of assortment of the various sizes of 11-377 series. PYREX®brand. (Coming 239410) Bundle of rods includes:

No. of Pieces	Rod O.D.
70	3mm
36	4
24	5
16	6
12	7
9	8
7	9
5	10
4	11

Approx 1.3kg (2.8 lb) of each size. In 1.2m lengths.
11-377-5.....Case of 25 lb/58.75

Glass Tubing Seals

For Sealing Metal to Borosilicate Glass

11-372-10
Seal consists of 15cm piece of borosilicate tubing with 5cm Kovar metal tubing insert. Glass tubing OD, 6.35mm. Kovar tubing dia, 6.4mm.
11-372-10A13.00

For Sealing PYREX® Brand to VYCOR® Brand Tubing

11-372-2
Short length graded seals with PYREX® end and VYCOR® end, identified by mark. Shorter seals can be made by measuring from the marked end and then cutting. Minimum recommended L, 32mm. Approx L, 50mm. (Coming 6466)

Approx. O.D.	Cat. No.	Pk of 1	Case of 8
7mm	11-372-2A	5.98	43.04
11	11-372-2C	7.80	58.16

Glass Joints

Glass Tubing Cutters, p 464-465
(Manual and electric types)

For making air-tight glass connections
All made of rugged PYREX® brand glass

Interchangeable Ball and Socket Joints

Easy to assemble or disassemble. Joints are carefully ground to meet NBS standards. Outer member of each joint has heavy bead to increase mechanical strength. Sizes are indicated in mm by 2 numbers. The first number indicates diameter of the ball and second number indicates inner diameter of connecting tubing.

Balls only. For 11-371-10 series socket joints. (Corning 6762)

11-371-5

Spherical O-Ring Joints

PYREX brand. Join two of these spherical joints with a Buna-N O-ring, and you have a greaseless connection that's leak-free and vacuum-tight. Quickly assembled and dismantled with 5-885 series clamps. Effective at absolute pressures as low as 10^{-6} mm of mercury and temperatures as high as 149°C. Applications vary from high temperature atmospheric and vacuum distillation to infra-red and mass spectrometer analyses. One O-ring included with each single arm joint. (Corning 6780)

Connecting Tubes for Glass Joints. See p 1199.

Glass Joint Sleeves and Tape

Assure leak-free connections without grease

Teflon® Sleeves

14-320

Teflon® sleeves are elongated cones of micro-thin (0.064mm) polytetrafluoroethylene film tapered to fit snugly around glass joints. Eliminates lubrication contamination along with frozen and leaking ground joints. Heat resistant from -75° to $+300^{\circ}\text{C}$. Ideal for cryogenic applications. Economical and long-lasting.

F No.	Cat. No.	Pk of 6
10/30	14-320B	14.05
14/35	14-320D	15.20
19/38	14-320E	15.50
24/40	14-320F	16.95

34/45	14-320H	18.25
45/50	14-320K	22.25

Teflon® Tape

Lab-tape Teflon® tape conforms to any shape or configuration. Wraps around ground joints, thermometers, stirrers, connecting tubes, and adapters to produce long-lasting, leakproof joints. Makes ideal gaskets for reaction flasks, bottles, bell jars. Gives a vacuum or pressure-tight seal without grease.

Non-contaminating, heat-resistant, self-lubricating, chemically inert. Thickness: 0.089mm. In 15m roll.

14-831-300

Shatterproof PMP Graduates

Transparent polymethylpentene construction. Tolerates heat, resists chemicals. Graduated in ounces and milliliters: 1 oz size graduated in ounces, milliliters, drams. Easy-to-read volumes — no meniscus. Autoclaving may alter accuracy. Smaller sizes especially useful as measuring graduates because flared, wide mouth is easy to fill. Except for material, conforms with Fed Spec NNN-G-692C. Individually boxed. (Nalge 3673)

Thermix® Stirring Hot Plates

11-493-5

11-493-318

Models 118 and 218

Boils 250ml water in 17min
Stirs 1500ml water at 1200rpm

Hot plate with built-in variable speed magnetic stirrer. Separate controls for independent heating/stirring or simultaneous operations. Hot plate heats to 399°C in 35min.

Cast-aluminum top-plate maintains even surface temperature. Won't crack or chip. Concentric guide lines cast in surface facilitate centering flasks and beakers over primary driving magnet. Edge slopes out over base so spilled liquids can't run down into motor compartment.

Several features protect motor and controls from heat. Air space, insulating asbestos fiber and heat-reflecting aluminum foil pro-

tect motor. Four ceramic posts separate top-plate from motor housing. Drive magnet has heat-dissipating mounting. Motor has built-in cooling fan. Front of base housing does not exceed 46°C after 8 hours operation at max temperature.

Ordering Information: 18Lx18Wx14cmH. With 14-511-93 Teflon®-covered stirring bar. 765w. CSA approved.

For 115V 50/60Hz.

Model 318

Heats to 400°C

Coated stainless-steel top-plate is corrosion-resistant and rustproof. Won't crack or discolor. Has built-in variable-speed magnetic stirrer. Separate controls for independent heating, stirring, or simultaneous operations. Hotplate heats to 400°C.

Air space, insulating glass wool felt, and heat-reflecting aluminum foil protect motor and controls from heat. Drive magnet has heat-dissipating mounting. Motor has

built-in cooling fan. Base is die-cast aluminum. Edges slope out over base so spilled liquids can't run down into motor compartment.

Ordering Information: With 14-511-93 Teflon® covered stirring bar. 19Lx19Wx15cmH. C.S.A. approved.

For 120V 60Hz.

Oscillating Hot Plate

Stirs even viscous fluids

Ideal for rapid mixing, dissolving metallic samples quickly, hastening precipitations. Individual controls for agitator and heater.

Hot plate is mounted on oscillator base which agitates in 3.2mm dia circle 216 times/min. Heats from 93° to 288°C, maintained by integral thermostat-controller.

Steel case with glass wool insulation and radiation shield. Raised ledge around top contains spillage. Cast-iron base with 4 steel balls support hot plate. Rubber feet.

Ordering Information: 37Lx47Wx22cmH. With hot plate, heater controller, oscillator base, motor. 2100w.

Autemp® Heater

Economical, thermostatically controlled

Fisher Autemp® heater operates from room temperature to 371°C, heating to max temperature in just 15min. Heating element operates intermittently for small tasks or continuously for jobs like lengthy evaporations. Temperature settings marked 1 through 7 make repeatability easy.

Integral clamp with thumbscrew on back of heater holds beakers or flasks on support rods or Flexaframe® supports (see p 1134). Height is adjustable to suit various apparatus assemblies.

Cast-aluminum top-plate and base. Enamel finish is chemical-resistant. 15cm sq. With replaceable heating element, thermostat, and integral clamp. 450w. Current consumed only when thermostat turns heating element on. CSA approved.

General Duty Hot Plate

Operates from 80° to 427°C

Fisher Model 85 consists of cast-aluminum plate, monel-encased ring heater, and advanced temperature regulator for infinite control. Heating section separated from housing by 4 ceramic insulating posts. Layer of insulation and stainless-steel reflector plate provide further insulation. Plate edge slopes and overhangs housing, protecting component section from spilled liquids. Temperature adjustment knob graduated between "Lo" and "Hi". In "Hi" position, ring heater is energized continuously. In intermediate settings and "Lo" position, ring heater is energized intermittently by heat-responsive bi-metal thermostat. Temperatures accurate $\pm 10\%$.

Ordering Information: 18Lx18Wx14cmH. For 120V 60Hz, 6.5amp.

Corning Combo Hot Plate/Stirrer

Heats quickly, evenly, and accurately to 510°C. Stirs magnetically with Teflon®-coated bar from 250 to 1000rpm or does both at once.

Shaded pole stirring motor has no brushes or commutators — runs quietly. Magnetic clamps, top clamps, and drive shaft are tough stainless steel. Shaft bearings are oil-impregnated bronze. PYROCERAM® brand glass ceramic surface.

Indicator lights show operating mode.

Ordering Information: 18Lx13Wx13cmH. 226cm² heating surface. With Teflon®-coated stirring bar. For 120V 50/60Hz, 615w. Weighs only 3.1kg (6¾ lb). UL listed.

Multi-Stir Plates

Synchronized stirring at varied temperatures

Multi-Stir plates provide synchronized stirring at any speed and temperature you select. You can stir up to 4 heated samples under identical conditions in range of 60 to 1200rpm. Temperature can be varied for each plate or all plates can be set to identical temperature.

Heats to 371°C in 6min with $\pm 3^{\circ}\text{C}$ accuracy. Safety light indicates surface heat is 65°C or above. White Nucerite®-coated 17cm dia top-plates, each with its own shaded pole motor. For 120V 50/60Hz. Two and 4-place models available. With 51mm Teflon® stirring bars for each plate. Four-place model has tachometer.

Nuova-7 Stirring/Heating Plate

60 to 1200rpm
Temperatures to 371°C

Designed to use less bench space. And to protect controls and motor from spills.

Most solid-state controls and motor located on right side of front panel. Not under hot plate. Ensures longer service life.

Reaches maximum temperature in just 8 min. Embedded heating element assures even heat distribution. Temperatures are held within $\pm 3^\circ\text{C}$.

Set-and-forget solid-state speed control. Your choice between 60 and 1200rpm. Utilizes eddy current braking system. Starting torque overcomes static friction of stirring mechanism. Reaches set speed immediately.

Ordering Information: Die-cast aluminum case. Square (18x18cm) Nucerite®-coated stainless-steel top-plate. Finished in green enamel. Over-all dimensions: 28Lx18Wx

8.9cmH. With 2 Teflon®-coated stirring bars. 120V 50/60Hz.

Hemispherical
Mantle

Heats upper half of flasks

Heating top rests on lip of 11-471 and 11-471-5 series mantles. Elliptical opening holds 1, 2, or 3 neck flasks. Prevents vapor condensation in upper half of flask. Fabric temperature limit, 450°C. Glass fabric construction. Without transformer or thermocouple. With 2-wire cord. CSA approved. For 115VAC/DC.

Pyrometer

Calibrated for use with iron-constantan thermocouple built into 11-471 and 11-472 series mantles. 11cm meter with mirrored scale reading 0° to 800°C and 0° to 1500°F temperature range.

11-472-65.....42.00
(Glas-Col PR-800)

Thermocouple for
11-472-65 Pyrometer

24-gauge iron-constantan. 76cm long. Insulated with Teflon®.

11-472-66.....2.00

For kettle heaters, see 11-847-15 series on p 529.

For suitable clamps, see p 189.

Heating Mantle

11-473

For bench or lattice

Capacity of 50 to 2000ml. Built-in continuously variable current controller operates at 450°C. Solid aluminum housing can be grounded. Flexible knitted glass wool fabric with coiled heating elements. Pilot light for current flow. For 125V 50/60Hz, 450w.

11-473.....99.00

Microtherm Mantle

11-474-5

Fits micro flasks to 50ml

Microtherm mantle handles spherical or pear-shaped flasks up to 50ml. Permits distilling to last drop without super-heating bare flask wall above liquid well. Consists of hot well formed from small thin wall inconel tube, slightly flared at end to receive flask. For use with any variable transformer. For 115VAC 60w. With 3-wire cord and 15cm support rod.

11-474-527.50

Fisher Scientific Company

Heating Mantle

For round bottom flasks

Quartz fabric skin and lining. Provide high wattage and temperatures (to 650°C) necessary for rapid distillation of water, liquid-phase and vapor-phase cracking of materials. May be plugged directly into line without use of transformer. Cylindrical aluminum housed table model. With integral arm, feet, 13mm aluminum rod for attachment to latices, 3-wire HSJ cord. For 115VAC/DC. Available in sizes up to 22,000ml on special order. (Glas-Col Series STM)

For art's sake

NEW, from Fisher, a **chemical template** to expedite the drawing of structural formulas of organic and inorganic compounds in reports and papers. Vastly simplifies tracing structures in perspective. This rugged plastic stencil, precision-cut, works beautifully with pencil, ballpoint, special drawing pens. Provides 27 different shapes. Plus protractor, handy millimeter rule. A lifetime tool for \$6.40. Complete with instructions. Order catalog no. 14-433-14.

Heating Mantles Contd.

Flexible Mantle Heaters

These heaters incorporate a heating element that is elastic, enabling flat or round-bottomed flasks and flasks of wide tolerance to be used in the same heating mantle. This unique construction provides the combined results of self adherence to the flask and maximum heat transfer. A sleeved, coiled spring inside the fabric at the neck opening makes the heaters particularly suitable for flasks with multiple necks.

A grounded metal housing within the external fabric of the

mantles ensures a firm support during bench operation and serves as an added safety measure in case of flask breakage. The housing does not affect the internal flexibility of the mantle in any way.

In addition to glassware vessels, metal, porcelain, and

silica, other vessels may be used in these mantles without loss of efficiency or safety. The mantles are also very lightweight and are excellent for heating suspended flasks.

Element temperatures of up to 450°C can be attained easily. For operation on 115VAC.

Automerse™ Heater

For vessels, tanks, baths

Thermostatically controlled immersion heater for use in vessels, tanks, baths containing water, oil, wax, paraffin, glycerine. Hang on side of container up to 23cm deep.

Set temperature on dial. Range 80° to 220°F (27° to 104°C) with dial graduated in 25°F increment. Safety cutout prevents elements from overheating in or out of solution. Thermostat body is dip-sealed to prevent bath condensation from entering. Stainless-steel sheath construction. With thermostat and pilot light. For 120V 50/60Hz, 850w.

11-463-14115.00

11-463-14

"Heat-by-the-Yard"

For pipes, columns, containers

Cut to desired length. Attach insulator connectors. Wrap around object to be heated. Reusable several times if max temperature of 450°C not exceeded. Network of resistance wires enclosed in knitted elastic sleeve of glass fiber yarn. Normal working voltage, 33V/m. Variable transformer recommended as voltage regulator. With 6 connectors.

Accessories for VirTis Micro
Models

Homogenizing Flasks

With straight sides. Stainless-steel container with tapped hole in base and vertical flutes. Capac, 2ml. Working range, 0.2 to 1ml.

11-504-17029.50

Cooling Cup

Made of Lucite. For 11-504-166.

11-504-1688.10

Blades

Stainless steel.

11-504-180Pk of 12/11.50

With rounded bulb. Made of borosilicate glass. With vertical flutes. Capac, 8ml. Working range, 0.5 to 5ml.

11-504-1667.50

Aerosol-Free Assembly

Includes Teflon® micro cap, stainless-steel baffle, baffle set screw, Allen key.

11-504-17811.50

Portable
Hand-Operated
Homogenizer

Emulsifies and suspends immiscible substances such as oils and aqueous solutions. Place substance to be mixed under plunger. Press handle downward to force liquid through fine orifice under high pressure. Liquid emerges in homogenous state. Stainless steel. Bowl capac, 355ml.
11-504-20070.00

Sonic Dismembrators

- Disrupt cells
- Homogenize tissues
- Decalcify bone

Model 300 produces high frequency vibration for emulsifications, extractions, dispersions. Also useful for degassing, welding, drilling, production processing. Rated for continuous duty.
Lower probe into container with sample. Set intensity to maximum percentage on calibrated scale. Switch unit on. Dismembrator 300-watt generator produces sonic vibrations which are transferred from probe to sample. Membranes are easily separated from cells without injury.
Ordering Information: Stainless steel with brushed aluminum face plate. 300-watt generator, probe support assembly, probe, 19mm standard titanium

tip, wrenches. Generator: 24Lx39W x17cmH. Generator wt 9.1kg. Probe: 9.5dia x 38cmL. Probe wt 3.1kg. 115V 50/60Hz.
15-338-40995.00
Model 150
Same as 15-338-40 but has 150-watt generator.
Ordering Information: With generator, probe support assembly, probe, 15-338-29 standard titanium tip, wrenches. Generator: 24Lx39Wx11cmH. Generator wt 7.3kg. Probe: 7.6dia x25cmL. Probe wt 1.7kg. 115V 50/60Hz.
15-338-26899.00

Accessories for Sonic Dismembrator

Titanium Microtips

For processing small quantities down to 0.3ml of material in test tubes. 4dia x 143mmL.

For Dismembrator	Needs Only	Cat. No.	Ea
15-338-26	60% Full Power	15-338-27	92.00
15-338-40	35	15-338-41	92.00

Standard Titanium Tip

Replacement tip for 15-338-26 dismembrator. Dia, 13mm.
15-338-2985.00

Intermediate Tip

For 15-338-40 dismembrator. Provides greater power than 15-338-41 microtip. Ideal for processing intermediate to small batches. 9.5dia x 143mmL.
15-338-4392.00

Titanium Cup Tips

Used with dismembrator probe assembly in inverted position. Disrupts or disperses small quantities of pathogens in thin-walled sealed culture tubes by immersing bottom of tube in cup liquid. Also for degassing, disaggregating, atomizing, and cleaning.

For Dismembrator	Dia	Capac	Cat. No.	Ea
15-338-26	38mm	25ml	15-338-31	150.00
15-338-40	51	50	15-338-44	190.00

Cooling Jackets

Allows circulation of heat exchangers around cup tip to diminish sample heating during long runs.

For Dismembrator	For Cup Tip	Cat. No.	Ea
15-338-26	15-338-31	15-338-33	60.00
15-338-40	15-338-44	15-338-45	65.00

Continuous Flow Chambers

For processing large samples. Chamber secured to standard tip with quick-fitting pressure gasket. Tip extends into small chamber which has ports for continuous passage of sample. By blocking inlet and outlet ports, chamber can

be used for high intensity sonication of small volumes.

For Dismembrator	Cat. No.	Ea
15-338-26	15-338-35	185.00

Humidity Chamber

Temperature, ambient to

77°C, $\pm 1/2^\circ\text{C}$

Humidity, 20 to 98%, $\pm 1\%$

Blue M Vapor-Temp® Controlled Temperature and Humidity Chamber. Ideal for electrical equipment and pharmaceuticals. Also useful in clinical labs, agricultural stations where controlled environment is required. May even be used as dry mechanical convection oven.

Cooling coil design eliminates need for tap water in 90% of applications. Memory-Ring® temperature dial lets you zero in on most frequently used temperatures for exact reproducibility. Air flow adjustable from 0 to 4248 liters/min with up to 30 complete changes of entire work area each minute.

Ordering Information: Stainless-steel cabinet houses controls, 1/6hp motor, blower, cooling coil, solenoid valve. 51Lx58Wx74cmH. Uses inverted PYREX® brand jar (41dia x31cmH) as sample chamber. For 120V 60Hz, 1800w. Shipping wt, 43kg(95 lb).

11-504-520985.00
(Blue M VP-100AT-1)

Chart gives relative humidity obtainable using +21°C tap water as cooling medium and ambient temperatures between +21° and +27°C. No refrigerator or compressor system is necessary to obtain relative humidity shown in shaded area. With tap water temperatures colder than +21°C, lower percentages or relative humidities are obtainable. Area in solid black indicates % of relative humidity without tap water cooling.

11-504-520

Density Gradient Column

Simple method (ASTM D1505)

Precision to 4th decimal place

Techne Tecam® density gradient column uses simple procedure for accurate determination of density of small solid samples. Conforms to ASTM D1505 for testing plastics. Measurements are made with reference to standard glass floats calibrated within $\pm 0.0002\text{g/ml}$.

Specimens need not be of uniform shape. Fibers, irregular fragments, or pieces of film are suitable. Several determinations can be made at same time.

Method applicable to quality control, research. In wide use for testing polyolefins, fluorocarbon polymers, nylons, PVC. Can separate natural and synthetic fibers. Can assay factors affecting density such as degree of crystallinity of plastics, concentration of isotopic content, presence of trace amounts of boron in silicon.

Precise density gradient covering sample density range is prepared in graduated tube by slowly introducing liquid mixture (usually 2-component) of continuously increasing density. Total gradient range is normally less than 0.3g/ml. Calibrated floats distribute themselves vertically relative to gradient. Specimen sinks to level of its own density. Specimen equilibrium position is read from 700mm column scale. Corresponding density value is determined from calibration line based on float positions.

Useful life of gradient can exceed 3 months

with careful technique. Float distribution provides continuous check of gradient linearity.

Graduated glass column 851x54mm with black background plate is contained in clear methacrylate water jacket. Maintained at $23^\circ\text{C} \pm 0.2^\circ$ by thermostatic controller; circulating pump assures uniformity. Automatic switch-off above 45°C . Controller range 15° to 95°C . Cooling coil allows cold water circulation for lower-than-ambient test temperatures.

Filling assembly produces linear gradient in 2 to 4 hours. Simple 2-flask system feeds heavier liquid from reservoir flask into mixing flask as column filling proceeds, for progressive density increase. Stopcocks control feed rate. Magnetic stirrer is built into flask support platform.

Motor-driven clearing device mounts on top of water jacket. Lowers or raises plastic mesh basket through entire column length at 2cm/min. Allows introducing series of floats or retrieving accumulated samples without spoiling gradient.

Ordering Information: Complete system consists of DC-1 density gradient column, DC-2 filling assembly, DC-3 column clearing device, and set of calibrated floats. Appropriate gradient liquids for required density range should be ordered separately. Examples include: A-412 Methanol, A-396 Benzyl Alcohol, A-416 2-Propanol, T-324-S Toluene, C-187 Carbon Tetrachloride.

11-509-21

Fisher-Davidson Gravitometer

Measures specific gravity within 0.001 unit

Reads specific gravities of liquids (S.G. 20°C/4°C) to $\pm 0.1\%$

Gravitometer is adaptation of hydrostatic balance. Two capillary manometers containing different liquids are interconnected and suction applied to junction. Heights to which liquids rise are inversely proportional to their densities.

Instrument is designed so sample height (in "Z" tube) remains fixed. Height of reference liquid (in "L" tube) then measures sample's specific gravity at 20°C test temperature, relative to water at 4°C.

When you use ethyl benzene (density 0.867) as reference, Gravitometer scale reads specific gravity directly in 0.600 to 2.000 range. Slide with index line and vernier enables you to read to 0.001 unit. With carbon tetrachloride (density 1.595), range is 1.104 to 3.68.

You can use sample tube with 1.9mm bore for most organic liquids. Tubes with 0.8mm bore are available for low-viscosity samples

and 4mm bore for high viscosities and surface tensions. Integral suction device and control valve are used to adjust liquids levels in "Z" and "L" tubes.

Ordering Information: Stand has leveling feet, bubble level, thermometer. With "L" tube, two "Z" tubes (1.9mm and 4mm), suction device, instructions.

11-509.....284.00

"L" Tube for reference liquid, as supplied with Gravitometer.

11-509-5.....21.00

"Z" Tube for sample liquids.

Hydrogenator

Agitates solutions in hydrogen for low pressure catalytic reactions

Synthesizes or modifies organic chemical compounds at pressures to 5 atmospheres. Procedure described by Dr. Roger Adams in *Organic Synthesis*, Vol 8, pp 10-16.

Materials to be tested are sealed with catalyst in bottle and connected to hydrogen tank. Air is removed either by evacuating bottle or flushing with hydrogen. Pressure is then applied from hydrogen reservoir and bottle is shaken to initiate reaction. After reaction reaches desired point, shaker is stopped, bottle vented, and product and catalyst removed.

Progress of reaction is followed by observing pressure drop in system. When using 250ml charge in 500ml bottle, tank pressure drops approx 0.56kg/cm² for each 1/10 mole of hydrogen consumed. Exact relationship between pressure drop and hydrogen consumed can be determined by making calibration run using weighed amount of compound whose hydrogen acceptance is known.

Ordering Information: With 4-liter gas tank with valves and gauges, motor, shaker, pressure hose with clamps, needle valve, three 500ml glass bottles, wrench, instructions. 38Lx55Wx36cmH. Shipping wt 29.5kg (65 lb). For 115V 60Hz.

4-713.....600.00

FISHERbrand® Hydrometers

Measure true specific gravity of light or heavy liquids

FISHERbrand® hydrometers measure true specific gravity of liquids, whereas weighing bottles and pycnometers measure density. Unless otherwise noted, all FISHERbrand hydrometers are graduated to read specific gravity of liquid at 60°F, compared with gas-free distilled water at 60°F (S.G. 60°/60°F). NBS recommends that reading be taken at point where liquid surface intersects graduated stem — not at top of meniscus. Specific gravity and temperature scales are checked against certified standards. Their accuracy is equal to or higher than require-

ments of ASTM and NBS. Hydrometer bulbs and stems are chemical-resistant glass, annealed to remove stains. They are streamlined so hydrometer quickly reaches setting point without trapping air bubbles. Ballast is special alloy. Scales will not slip or twist. Double scales can be read without turning hydrometer. Tables show approximate volume of liquid required so hydrometer can submerge to full extent of scale when used with suggested cylinder.

Specific Gravity Scales

Hydrometers with special specific gravity scales are listed on pp 494 to 499. Calibration of these hydrometers is based on following formulas:

Specific Gravity

S.G. $\frac{60^\circ\text{F}}{60^\circ\text{F}}$ = ratio of density of liquid at 60°F to density of distilled water at 60°F as unity

API Gravity (ASTM 287)

$$^\circ\text{API} = \left[\frac{141.5}{\text{S.G.} \frac{60^\circ\text{F}}{60^\circ\text{F}}} \right] - 131.5$$

Baumé Scales (two different scales, for liquids lighter or heavier than water).

°Twaddell Scale (heavy liquids)

$$\text{Twaddell} = 200 \left[\text{S.G.} \frac{60^\circ\text{F}}{60^\circ\text{F}} \right] - 1$$

Baumé Light Scale

$$^\circ\text{Baumé} = \left[\frac{140}{\text{S.G.} \frac{60^\circ\text{F}}{60^\circ\text{F}}} \right] - 130$$

Brix (Balling) Scale

°Brix = % sugar by weight at specified temperature

Baumé Heavy Scale

$$^\circ\text{Baumé} = 145 - \left[\frac{145}{\text{S.G.} \frac{60^\circ\text{F}}{60^\circ\text{F}}} \right]$$

Salimeter Scales

% saturation of salt solution
% of salt by weight

FISHERbrand® Hydrometers

With specific gravity and Baumé scales
For industrial use

National Bureau of Standards has adopted two standard formulas for specific gravity measurement by Baumé system.

Baumé "Light" scale is used for varnish, paint thinners, and other liquids lighter than water:

Baumé "Heavy" scale is used for industrial acids and alkalies, paint, syrup, milk concentrates, and other liquids heavier than water:

Baumé Light Scale

$$^{\circ}\text{Baumé} = \left[\frac{140}{\text{S.G. } \frac{60^{\circ}\text{F}^*}{60^{\circ}\text{F}}} \right] - 130$$

Baumé Heavy Scale

$$^{\circ}\text{Baumé} = 145 - \left[\frac{145}{\text{S.G. } \frac{60^{\circ}\text{F}^*}{60^{\circ}\text{F}}} \right]$$

Conversion table for both scales is given on page 494.

FISHERbrand® hydrometers are made with dual Baumé and specific gravity scales in same body and with Baumé "Heavy" scale alone.

FISHERbrand® Baumé Hydrometers. Baumé Heavy scale for liquids heavier than water. Use 8-530J cylinders (p 226) with 300ml hydrometers. Need only 250ml of liquid for submersion.

Baumé Range	Div	L	Use with Cylinder	Liquid Volume	Cat. No.	Ea

FISHERbrand Specific Gravity/Baumé Hydrometers

For liquids lighter than water, use 8-530B cylinders (p226) with only 80ml of liquid for submersion. For liquids heavier than water, use 8-530J cylinders with only 250ml of liquid for submersion. For "Universale" hydrometer use 8-532P cylinders (p 226). Needs 325ml of liquid for submersion.

FISHER[®]brand Twaddell Hydrometers

Customarily used with liquids heavier than water, such as milk, sulfuric acid, tanning solutions in leather curing.

Calibration of these hydrometers is based on following formula:

$$^{\circ}\text{Twaddell} = 200 \left[\frac{\text{S.G. } \frac{60^{\circ}\text{F}^*}{60^{\circ}\text{F}}}{1} - 1 \right]$$

Use 8-530G cylinders with 225ml of liquid for submersion of hydrometer scale.

Twaddell Range	Div	L	Use With Cylinder	Liquid Volume	Cat. No.	Ea

*S.G. $\frac{60^{\circ}\text{F}}{60^{\circ}\text{F}}$ = ratio of density of liquid at 60°F to density of distilled water at 60°F as unity.

11-587-10
11-585

FISHERbrand® Petroleum Hydrometers

Specifications for API gravity hydrometers have been established by ASTM in Standard E100. These ASTM specifications are accepted by NBS and U.S. Bureau of Mines.

Calibration of these hydrometers is based on following formula:

$$^{\circ}\text{API} = \left[\frac{141.5}{\text{S.G.} \frac{60^{\circ}\text{F}^*}{60^{\circ}\text{F}}} \right] - 131.5$$

11-603 hydrometers are equipped without thermometers. Use 11-604 or 11-604-5 API gravity thermometers. 11-603-5 thermo-hydrometers have thermometer in hydrometer body. Accurate to within 1/2 division of scale. Use 8-530K cylinders (p 226) with hydrometers equipped without thermometers. Need 325ml of liquid for submersion. Use 8-532D cylinders (p 226) with thermo-hydrometers. Need 325ml of liquid for submersion.

Safety First

A 64-page manual of what it takes to satisfy OSHA — plus valuable chapters on accident prevention, first aid, firefighting. Illustrated. Check 2 on reader carder service at end of blue index pages.

FISHER^{brand}® Balling and Brix Hydrometers

Brix scale is customarily used to measure concentration of sugar solutions in refineries. Brix hydrometers are calibrated at 20°C. Based on following formula:

1° Brix = 1% sugar by weight

Balling (Plato) scale is numerically equal to Brix scale, but is used by brewers. Both types of hydrometers use 8-530J cylinders (p 226) with 250ml of liquid for submersion.

Range	Div	L	Use with Cylinder	Liquid Volume	Cat. No.	Ea
Brix Hydrometers

Balling Hydrometer						
0-8	0.1	300	8-530J	250	11-612-10	4.95

FISHER^{brand}® Alcohol Hydrometers

Used by distillers and taxing or law enforcement agencies to measure the alcohol content of beverages. Calibrated on two scales: Tralle (% by volume alcohol), and proof (2 x percentage of alcohol). Tralle scales are graduated in 1% divisions; proof scales in 2 proof divisions.

Tralle & Proof Hydrometer, 300mm

Tralle scale 0 to 100%. Proof scale 0 to 200. Requires about 250ml of liquid in 8-530J cylinder for measurement. (See page 226 for cylinders.)

11-5904.45

Tralle & Proof Thermo-Hydrometer, U.S. Custom House Standard, 380mm

Tralle scale 0 to 100%. Proof scale 0 to 200. Hydrometer body contains 10 to 100°F thermometer with temperature compensation scales. Requires about 325ml of liquid in 8-532D cylinder (p 226).

11-5959.60

Fisher Safety Manual . . . 65 pages of useful safety tips.

Covers OSHA requirements, safety equipment, accident prevention, laboratory first aid, fires and fire fighting . . . gives you dozens of references on laboratory safety.

Just check no. 2 on reader service card at end of blue index pages. We'll have a copy on its way by return mail.

FISHERbrand® Salimeters

These specialized hydrometers are used in pickling and meatpacking plants to measure salt content of brines. Saturated salt solution contains 26.4% by weight sodium chloride. Hydrometers may be

calibrated to read percentage saturation or percent salt at 60°F. Both hydrometers are 300mm long and require 250ml of liquid in 8-530J cylinder (p 226).

Range	Div	Cat. No.	Ea
0-100%	1%	11-605	4.50
Saturation 0-26.4% Salt	0.5%	11-606	4.50

FISHERbrand® Thermo-Hydrometers

With these hydrometers you can read both specific gravity and temperature of samples and make any necessary corrections. Thermometer with 20°-130°F scale (2°F divisions) is enclosed in hydrometer body. Available with single (specific gravity) and dual (S.G. and degrees Baumé) scales. Length 330mm. Use 8-530K cylinder (p 226) with about 325ml of liquid.

Soil Hydrometers

For ASTM 151H. Soil Mechanics Laboratory, Massachusetts Institute of Technology, utilizes these hydrometers to measure specific gravity of soil suspensions. ASTM Method D422 specifies 14-331-5A

(ASTM 151H) for grain-size analysis of soils. Tests call for 1000ml of suspension in 8-532D cylinder (p 226). Hydrometers are calibrated to 68°F (20°C).

S.G. Range	Div	Cat. No.	Ea
0.995-1.038	0.001	14-331-5A	8.85
0.995-1.060	0.001	14-331-5B	8.85

For ASTM 152H. Soil hydrometer scaled from -5 to 60g/liter in 1g/liter divisions. For reading concentration directly in determination

of particle size distribution by ASTM D422. Otherwise same as 14-331-5A and 14-331-5B series. 14-331-5C.....8.85

Baume and Brix Thermo-Hydrometers

Ideal for soft drink and brewery industries. Calibrated at 20°C. Thermometer with red correction scale inside hydrometer body.

Baumé thermo-hydrometers re-

quire 275ml of liquid in 8-530J cylinder (p 226). Brix thermo-hydrometers require 500ml of liquid in 8-530L cylinder.

Fisher Scientific Company

Sling Psychrometers

11-664

Model With Built-In Slide Rule

No need to use tables or make calculations with Model SAC Sling Psychrometer. Thermometer holder telescopes into swivel handle, which has slide rule to calculate relative humidity from wet and dry bulb temperatures.

Matched 30° to 110°F mercury thermometers with 1°F scale divisions are mounted together in strong plastic frame with built-in water reservoir to keep wick wet. Thermometers have magnifying front, deeply etched numerals, and thin bulbs giving fast thermal response.

Ordering Information

Model SAC Sling Psychrometer. Slide rule has double (30° to 70°F and 50° to 110°F) scale. Telescoped instrument is 2.5diax19cmL, fits pocket nicely.

11-66422.00

Mercury Thermometer, 30° to 110°F. Replacement for wet or dry bulb thermometers in 11-664.

11-664-23.10

Wicks for 11-664 Psychrometer. Specially treated material guarantees rapid wetting and thermal response for wet bulb.

11-664-4.....Pk of 4/2.20

11-666

Wet and Whirl Model . . . Easy to use.

This psychrometer has 23cm thermometers recessed in metal block for protection against breakage. Extra length gives higher air speeds, quicker equilibration, makes reservoir unnecessary. Just wet wick and whirl thermometers.

Ordering Information

Sling Psychrometer. Interchangeable thermometers have 20° to 120°F scale with 1°F graduations. Use tables in instructions to calculate RH from wet bulb depression. With extra wicks and instructions.

11-66629.50

Thermometer, 20° to 120°F. For replacement in 11-666.

11-6689.00

Wicks for 11-666 Psychrometer.

11-673Pk of 12/4.00

Motor-Blower Psychrometer

Reads RH in small spaces

Psychron™ Hygrometer is wet-bulb psychrometer with battery-powered fan that draws air over wet and dry bulbs at 4.57m/sec (274m/min). Equilibrium takes 1½ to 2 min.

Psychron is 25x4.5x11cm. Can be used in glove boxes and humidity cabinets. Matched 10° to 100°F thermometers (1°F divisions) are in recess in plastic housing. Light shield aids reading in bright light. Lamp for reading in dark. Polyethylene bottle holds water (30ml) for 100 measurements.

Use psychrometric slide rule to calculate relative humidity for thermometer readings, chart on back of case for dew point, tables in instruction book for other functions.

Ordering Information: In metal carrying case (31x18x11cmH) with nylon neck strap. Two extra water bottles. Space for wicks; slide rule; and instruction book, but without batteries. Uses 3 "D" cells. (Available on special order with -15° to 45°C thermometers.)

11-662-100.....85.00

11-662-100

Wall Hygrometers

For daily monitoring of humidity

With Built-In Calculator

Use same wet-bulb/dry-bulb principle as psychrometer. Accuracy is lower, since wet bulb is cooled by water evaporating into still air.

Note difference between wet and dry bulb temperatures. Turn roller-chart at top till you see wet-bulb depression as red figure. Read relative humidity on chart below dry bulb (ambient) temperature.

Attractive 13x18cm panel has red-filled thermometers (40° to 110°F). Translucent water cistern. Comes with humidity booklet and wicks.

11-61419.95

11-614

11-661

11-661-5

Thermometer and Scale, 40° to 110°F, for 11-614 Hygrometer. For either wet or dry bulb.

11-614-24.95

Wicks for 11-614 and 11-615 Hygrometers.

11-635.....Pk of 12/4.00

Mason Type

Wet-bulb/dry-bulb Mason-type hygrometer like 11-614, with 11x23cm mahogany-finish phenolic panel, mercury thermometers (30° to 120°F), and glass water cistern. Instructions have RH tables. Uses 11-635 Wicks.

11-61519.95

Thermometer and Scale, 30° to 120°F, for 11-615 Hygrometer.

11-6256.95

Cistern, for 11-615.

11-613A.....2.50

Dial Type Hygrometer

With white 12cm dia dial, red pointer, chrome trim. Expansion and contraction of hygroscopic sensor is transmitted to meter calibrated to show 0 to 100% RH. For wall mounting.

11-66110.50

Thermometer-Hygrometer

Attractive barometer-style wall hygrometer shows room temperature (30° to 110°F and 0° to 50°C) and relative humidity (0 - 100%) at a glance. Black case with silver-finish dial, brass trim, is 7Lx2.9Wx19cmH.

11-661-510.00

YSI Dew Point Hygrometers

11-662-50

Read and record dew point and vapor pressure directly

Vapor pressure is proportional to moisture content of air at ambient temperature. Dew point is temperature at which this air will become saturated if cooled. Model 91 Hygrometers show both.

Uses electronic sensor ("bobbin"). Bifilar electrode wound on wick impregnated with hygroscopic lithium chloride. Conductivity (hence current through wick) increases as lithium chloride absorbs moisture from air, decreases when it dries.

Heat generated by current is sensed by thermistor inside bobbin, which controls meter. Moisture in wick evaporates until it is in

equilibrium with water in air. Thermistor signal becomes stable, and meter shows dew point and vapor pressure directly.

Use 11-662-54 single sensor with static air in glove boxes, cabinets, etc. At low temperatures, and in moving air, 11-662-56 double sensor is more accurate. Both have 305cm lead for use away from meter.

Record dew point with 0-10mV recorder that has 50,000 ohms minimum impedance. By using YSI 701 temperature sensor (special order), read ambient temperature on dew point scale.

Choice of two models, for 117V 50/60Hz. Model 91HC reads °C; 91HF reads °F.

Readout unit (25Lx20Wx13cmH) weighs 3kg. Order sensors separately.

Model	Dew Pt Range	Readable To	Accuracy	V.P. Range	Readable To	Cat. No.	Ea
91HC	-12° to 42°C	0.25°C	±0.4°C	1.8 to 61.5mmHg	1mmHg	11-662-50	360.00
91HF	11° to 107°F	0.50°F	±0.75°F	1.9 to 60.4	1	11-662-52	360.00

Moisture Sensors

Single Bobbin. For static air. 1 dia x 6cmL. With 3m lead.

11-662-54145.00

Double Bobbin. For low temperatures and moving air. 1.5 dia x 6cmL. With 3m lead.

11-662-56175.00

Direct-Reading Hygrometer

11-657

Use in glove boxes or humidity cabinets

Meter shows relative humidity directly from 15% to 95%. Serdex® hygroscopic membrane diaphragm responds quickly to humidity change. RH range: 15-95% at temperature from -35° to 130°F. Accuracy is high (±1.5%) when used in 244m/min air stream. Louvers in case assure circulation in still or moving air. With carrying handle. 11Lx7.6Wx10cmH.

11-657131.50

Desk Hygrometer

With easel has separate scales for humidity (0 to 100%) and temperature (20° to 120°F). Dark gray plastic with brass trim, red hands, silver-finish dial. 9.2Lx3.8Wx 9.2cmH. Hang it on wall if you like.

11-661-105.00

11-661-10

Serdex® Hygrothermographs

11-658-10

Measure humidity changes within ±3% accuracy

You can record humidity changes of ±1% or less with ±3% accuracy with Serdex® Hygrothermographs. This is close to maximum accuracy of hygroscopic sensors.

These instruments are calibrated for use like psychrometers, in stream of air at 244m/min, feature greater inherent accuracy than static-air hygrometers.

They record temperature on upper shelf of 15.2cm chart, with RH on lower half. Same graduation is used for both, making correlation of readings easy.

Unit as shown, with sensors extended into air stream, is 38Lx15Wx31cmH. With 100 sheets of chart paper, and 1 bottle each of red and purple ink.

Time Span	Div	RH Range	Div	Temp Range	Div	Chart No.	Cat. No.	Ea
24hr	30min	0-100%	2%	0-100°F	2°F	11-658-12	11-658-10	536.00
7day	2hr	0-100	2	0-100	2	11-658-22	11-658-20	536.00

RH and Temperature Recorders

7-day circular chart, convenient for filing

If you don't need the high precision and accuracy of Hygrothermographs, remember that these Serdex Humidity/Temperature Recorders cost about half as much.

Retain operating characteristics in ambient temperatures from -35° to +130°F. RH and temperature graphs drawn in different colored inks. Can be correlated at a glance. Charts, 15.2cm dia. Metal case with carrying handle. 29Lx5.1Wx19cmH. With 100 charts and 1 bottle each red and purple ink.

Isotemp® BOD Incubator

**Holds 300 standard
bottles
Direct-reading**

Fisher Model 300 incubator has 0.48m³ of space and temperature range of -10° to 50°C. Stores 300 standard BOD bottles for APHA determinations of sewage and waste flow. Also handles incubation of bacterial cultures in fermentation tubes, Petri dishes, culture flasks or tubes, membrane filters; enzyme and dairy product tests; storage of vaccines and biologicals.

Temperatures are set with digital switch and maintained by solid-state controller. Compressor is hermetically sealed, has built-in thermostat to guard against electrical or heat overload, lifetime lubrication.

Basic refrigerator unit has 5 adjustable chrome-plated steel shelves and 5 full-width door shelves. Enamel steel exterior. Porcelain enamel interior resists rust and chipping. Pop-out lock and key. Slim-wall insulation. Automatic interior light. Exterior

safety signal light indicates power failure. Magnetic door gasket seals interior. Convenience outlet. Zero-cross switching eliminates radio wave interference.

Ordering Information: Inside, 68Dx59Wx134cmH. Outside, 74L x76Wx163cmH. For 115V 60Hz, 760w. Shipping wt, 129kg (285 lb).
11-679-25995.00

BOD bottles are on p 100. For complete selection BOD test reagents, see *Fisher Chemical Index* (red-edged pages).

11-679-25

Under-Counter Model

Holds 114 standard BOD bottles

Fisher Model 146 Incubator is an undercounter (0.13m³) refrigerator with heater, blower, and thermostat. Temperature controller has 6 numbered divisions from 0 to 5, covering the range 3° to 50°C. Heavy mark at 2 (20°C) for standard BOD incubations. Constancy ±0.5°C, uniformity (determined with open thermocouple mounted inside empty 300ml BOD bottle) within ±1.0°C over entire range. Also useful for preservation of vaccines and biological materials. Dial thermometer on door; column

thermometer inside.

Heating unit is single assembly mounted in evaporator. It cycles against compressor for fast temperature control. 1/12 hp compressor is permanently sealed. Door, lined with white Micarta sheet, can be mounted to open from left or right hand side.

Ordering Information: 61Lx 62Wx81cmH. Two shelves 46x48cm. For 115V 50/60Hz. Shipping wt, 54kg (120 lb).

²Door open 1 min with incubators at 37°C

³Plus door overhang of 5cm

The same cabinet design and airflow concept employed by Isotemp® gravity convection ovens make the Isotemp incubator an outstanding performer. Top grade materials, innovative design, and rigid production specifications are incorporated into each model. Outstanding features include a transparent inner door, reliable Safety Sentinel system and no-tip full and half shelves, as described below.

Arbitrary temperature control. Select desired temperature setting on 19 division dial and fine tune as temperature stabilizes (indicated by cycling of white heat lamp). Thermometer has special marks at 37° and 56°C to aid in reproducing most commonly used incubation temperatures.

Safety Sentinel. Irreplaceable cultures and specimens protected by reliable dual thermostat. Safety thermostat automatically tracks control thermostat setting at higher temperature and regulates system if control thermostat malfunctions. Red safety lamp indicates Safety Sentinel is operating.

Inner transparent door. Heat-resistant safety glass door allows specimens to be

viewed without disturbing thermal equilibrium of chamber.

No-tip full and half shelves. Glide effortlessly on steel rod racks. Support heavy loads and prevent sample spillage. Cross-pieces spaced at 25mm intervals to adjust shelves for any size container. Open rack construction facilitates airflow. Accessory half shelf offers new convenience. Enables handling short and tall vessels simultaneously.

Functional design. Stainless-steel chamber wipes clean. Resists corrosion and contamination. Five-centimeter fiberglass insulation contains and dissipates heat. Chest high chamber facilitates sample handling. Side-mounted panel puts controls within normal reach and thermometer at eye level. Adjustable leveling feet accommodate uneven benches. Cabinet and chamber panels detach for servicing. Accessory wall-mounting bracket conserves bench space.

Positive latch door. Manually operated handle and mechanical latch secure door against one-piece chamber seal. Door opens full 180° for unobstructed chamber access.

Handle is "touch-safe" at all operating temperatures.

Unique appearance. Parchment yellow cabinets accented with black trim and wood grain vinyl. Baked-on enamel finish especially formulated to resist chemical blemishes.

Stacking Accessory

For Isotemp® Incubators

Important space-saving device

Simply place the heavy-gauge steel stacking accessory on top of one incubator. Then mount another incubator on top of accessory.

Each stacking accessory is equipped with a fan for proper ventilation between stacked units. On-Off toggle switch controls fan power; pilot light indicates fan operation.

Magnetically latched access door to vents and thermometers of lower unit and leveling feet of upper unit.

Finished in charcoal black acrylic enamel to coordinate well with incubators. Four models of stacking accessory accommodate all Models 303 and 503 Isotemp incubators.

11-679-68

Thelco[®] Incubator

Handles large loads . . . 0.91m³ capacity

2.8m² shelf space handles up to 880 BOD bottles simultaneously. Yet occupies less than 0.8m² floor space. Ideal for crowded labs.

Standard temperature unit operates from 5° above ambient to 70°C. Hydraulic thermostat controls temperature. Uniformity is $\pm 0.5^\circ$ from 5° to 37°C. $\pm 1.0^\circ$ from 38° to 70°C. Safety thermostat assumes control if temperature rises above safe level. Dial thermometer graduated in °C and °F. Adjustable wattages: off, 350, 700, 1400w.

Ordering Information: Steel exterior finished in enamel. Aluminum interior. Solid door. Six rod-type cadmium-plated steel shelves adjustable on 13mm centers. Glass wool insulation. Vinyl door gasket with internal magnets. Exterior control panel has switch and pilot light for interior outlet, temperature control and safety thermostats. 4-position heat selector, on-off switch.

Interior dimensions, 61Dx76W x183cmH. Exterior dimensions, 76Lx91Wx224cmH. 1450w. Shp wt, 284kg(635 lb). 120V 50/60Hz.
11-679-683050.00
 (Precision 31032)

Water-Jacketed Incubators

Radiant heat assures $\pm 0.5^{\circ}\text{C}$ uniformity

Excellent uniformity achieved by radiant heating from all 5 jacketed walls. Heat storage capacity of water jacket permits quick temperature recovery over ambient to 55°C range. Low watt density grid heaters completely isolated from work chamber.

Filled with water through combination filler and siphon-emptying arrangement in top. Distilled water is suggested.

Stainless steel. Solid insulation. Door has aluminum liner and cam hinge closers. Neoprene gasket. Inner glass door with positive tension, Turn-Tite latch allows visual checking of contents without disturbing incubation. Perforated aluminum shelves.

Controls mounted on panel over door include regulating and safety hydraulic thermostats, indicating lights, dial thermometer, direct reading water gauge. For 115VAC. UL and CSA listed.

Super Convenience and Protection Isotemp[®] CO₂ Incubator

Heat range: ambient to 60°C

Humidity: 90 to 98%

CO₂ concentration: 0-20%

Two models: Fully automatic Model 512 and the semi-automatic Model 510

Both models incorporate these important features:

Water-jacketed chamber

Water-jacketed CO₂ Incubator maintains uniform temperatures varying no more than $\pm 0.5^{\circ}\text{C}$ at 37°C — when measured at nine ASTM-specified test points in its chamber. All thanks to heat-tight chamber, water-jacketed on five sides. Insulated with 2.5cm thick self-extinguishing polystyrene.

Drainage trough

Condensed moisture is neatly removed. Observation window condensation and accidental humidifier overflow are drained from incubator via special trough that channels water to drain connection.

Corrosion-proof

Incubator chamber front and bottom panels entirely of stainless steel to resist contamination and corrosion.

Built-in humidifier . . . no water pans

Separate solid-state controller constantly compares chamber and water temperatures. Automatically establishes a differential between the two. Elevates water temperature sufficiently to compensate for any heat loss during transfer of mixture from humidifier to chamber. Gone are water pans and their related mold and algae growth on chamber floors.

Shelves: smooth and adjustable

All 6 shelves slide smoothly on electropolished stainless-steel rod racks. Move them with just one hand. Perforated to insure uniform CO₂ and heat distribution.

Accessible

Front-mounted control panel puts controls within normal reach, meters at eye level. Chest high chamber simplifies sample handling. No reaching or stretching.

Easy servicing and maintenance

Side panels are easily detachable to get at internal components and heater elements. Solderless wire tabs and board connectors speed part replacements.

Calibrated scales

Temperature and CO₂ controls are direct reading. Require no calibration. Indication meters, mirror-backed for easier reading.

Modern styling

Parchment-colored cabinet accented with black trim and woodgrain vinyl. Blends with all lab furniture. Baked-on enamel finish especially formulated to resist chemical blemishes.

Performance Characteristics

Temperature Range	Ambient to 60°C
Temperature Constancy ¹	$\pm 0.1^{\circ}\text{C}$
Temperature Uniformity ²	$\pm 0.5^{\circ}\text{C}$
Temperature Set Point Accuracy	$\pm 1.0^{\circ}\text{C}$
Temperature Set Point Reproducibility	$\pm 0.5^{\circ}\text{C}$
Control Sensitivity	$\pm 0.01^{\circ}\text{C}$
CO ₂ Concentration Range	0 to 20% v/v
CO ₂ Constancy	$\pm 0.5\%$
Humidity Range	90 to 98%

Physical Characteristics

Capacity	.14cu m
Shelf Area	1.5sq m on 6 shelves
Dimensions	61Lx97W x79cmH

¹Maximum deviation from mean equilibrium temperature at 37°C .

²Average deviation from mean of 9 thermocouples at 37°C .

11-699-510

Fully Automatic Model 512

Two selector controls and two indicating meters (one pair for temperature and one for %CO₂) provide fully automatic operation. Simply set temperature selector (calibrated in 1° increments over 20° to 60°C) and observe temperature readout meter. Set the %CO₂ selector (calibrated for 0 to 20%) to the desired concentration of CO₂ and observe the %CO₂ meter. The 512 does the rest. Temperature control sensitivity $\pm 0.01^\circ\text{C}$. CO₂ constancy $\pm 0.5\%$.

Separate CO₂ cylinder and humidifier. Controlled flow of CO₂ from an external pressurized cylinder enters the chamber directly. Air from an internal pump is bubbled through warmed distilled water in a built-in humidifier and then transferred to the chamber. Resulting atmosphere mixes uniformly by thermal diffusion and gravity convection.

Closed-loop control system automatically maintains CO₂ level. CO₂ level in the chamber is automatically monitored and maintained by thermal conductivity detector system combined with a solid-state controller and solenoid valve. Solenoid valve maintains a balance between the preset CO₂ level and the actual CO₂ level in the chamber.

No manual purge control. Opening the inner door automatically disturbs the balance, causing the solenoid to open and rapidly restore the balance.

Built-in auxiliary pressure regulator for pressurized CO₂ supply

guards against damage from possible failure of primary cylinder regulator.

Once set, chamber temperature is automatically controlled. Two solid-state controllers operate simultaneously without the need for traditional thermostats. Each controller uses a thermistor immersed in the water jacket to precisely monitor and maintain set temperature. Bank of 3 lamps on control panel provides 2 temperature controls, heater, and CO₂ flow indicators.

Heated glass inner-door. No condensation. Maintained by a solid-state controller relative to chamber temperature. Enhances temperature uniformity as all 6 sides of chamber are in effect heated. Allows operator to observe samples — even read sample identification labels or readouts on accessory instruments within the chamber — without disturbing temperature uniformity and CO₂ concentration.

Special filtration. Effluent passes through a 0.8 micron filter before entering atmosphere, providing general protection to operator. Custom filters available to trap specific microbes.

Ordering Information: With incubator assembly, 6 trays, leveling feet, warning tag, and instruction manual. For 120V 60Hz.

11-699-5122995.00

For 240V 50Hz

11-699-5132995.00

Semi-Automatic Model 510

Direct temperature reading. Simply turn adjustment knob (calibrated in 1° increments from 20° to 60°C) to desired temperature and walk away. Thermistor in incubator's center detects exact temperature, with readout on front-panel meter. When chamber temperature matches dial setting, heater cuts off and system responds to $\pm 0.01^\circ\text{C}$ change.

Incubator has 2 solid-state temperature controllers, each completely independent of the other functioning concurrently. In case one controller fails, the other prevents run-away temperatures. Bank of 3 indicator lamps on control panel indicates operation of heater and controller.

Simple atmospheric control. Simple formula gives you approximate settings for dual flowmeters on front panel: one for CO₂ and one for air. Graduated in liters/min. Adjustable to control desired blend of gases between 0 and 20% volume per volume, accurate within $\pm 5\%$ full-scale. Humidifier system pulls in distilled water as needed. Air/CO₂ gas mixture is bubbled up through distilled water reservoir to produce gas saturated between 90% and 98% RH. This atmosphere moves continuously to sample chamber.

CO₂ provided by external gas cylinder; air, by internal pump at rates between 1.7 and 3.0 liters/min. No need for external air source. A push of spring-controlled purge button on front control panel recharges the chamber with CO₂

directly from supply cylinder following reduced concentration whenever the inner door is opened.

Built-in controls eliminate back pressure on air pump and run-away CO₂ pressure. If air pressure falls below 1.7 liter/min, relief valve protects pump from damaging back pressure. If CO₂ regulator fails, built-in auxiliary pressure regulator withstands full bottle pressure.

Two filters trap contamination. Unique protection against cross-contamination — for both operator and sample. One 0.8 micron filter cartridge mounted in chamber exhaust vent removes microbes from effluent gases. Another 0.8 micron filter purifies incoming air/CO₂ mixture to protect samples.

When outer door is open, clear safety-glass inner door (tightly held by positive latch) gives good view of samples. Chamber equilibrium not disturbed.

Ordering Information: With incubator assembly, filter tube assembly, 6 trays and instruction manual.

For 120V 60Hz.

11-699-5102495.00

For 240V 50Hz.

National CO₂ Incubators

Make tissue culturing easy and successful

Single door model. Has built-in CO₂ air metering system. Compact qualitative and quantitative control for CO₂ concentrations from 0 to 20%. Meets critical requirements of 98% RH at 37.5°C. Temperature control achieved by preheating air/CO₂ mixture before it enters chamber. Fast recovery purge timer operates after door is opened to restore desired CO₂ level.

Temperature range, ambient to 55°C. Uniformity of $\pm 0.5^{\circ}\text{C}$ provided by radiant heat from 5 water-jacketed walls. Built-in reservoir maintains humid atmosphere. Moisture does not form on walls since they are always warmer than surrounding air.

Ordering Information: Stainless-steel. Enamel exterior finish. Solid insulation. Outer door has cam hinge closing. Inner glass door has snap lock. Six perforated aluminum shelves (0.93m²) adjustable on 25mm centers. Inside, 48Lx46Wx68cmH. Outside, 58Lx58Wx91cmH.

Regulating and safety hydraulic thermostat dials, indicating lights, flowmeters, purge timers, water level gauge, dial thermometer. For 115VAC 350w. Shipping wt, 88kg(195 lb). UL and CSA approved.

11-686-501860.00
(National 3221)

Double door model. Similar to 11-686-50 except with separate CO₂ flow metering systems in each of its 2 chambers. Twelve shelves provide 1.9m² shelf space. Inside, 48Dx46Wx68cmH (each chamber). Outside, 58Lx117Wx91cmH. 115VAC, 500w. Shipping wt, 134kg(295 lb).

11-686-602560.00
(National 3331)

Floor Stand for Double-Door Incubator

Suitable for 11-686-60 incubator above. Enclosed shelf and latching doors. Steel construction with durable gold baked-enamel finish. Convenient vertical black handles. Steel leveling feet. Outside dimensions: 58Lx117Wx81cmH.

11-686-76635.00

Self-Contained Gassing System

Produces dependable, continuous stream of air or CO₂

Flowmaster. Sustains continuous flow of air and carbon dioxide for applications such as tissue culturing. Identical to CO₂ system built into CO₂ incubators described above. Provides quantitative and qualitative control. Range from 2.2 to 17.6 liter/minute or pre-mixed carbon dioxide and air. Percentage of CO₂ to air adjustable from 0 to 20%. 1% of scale range sensitivity.

Unaffected by pressure fluctuations up to 1.4kg/cm².

Ordering Information: Compact, enamel-finished housing. 13Lx31Wx15cmH. With air filter, calibrated flowmeters, purge timer, hose connections, constant pressure regulators, gas mixing manifold

Thelco® Water-Jacketed CO₂ Incubators

Maintains temperature uniform to $\pm 0.4^{\circ}\text{C}$ at 37°C

For incubating bacteriological cultures such as *Brucella abortus*, *Neisseria gonorrhea*, *Escherichia coli*, *Streptococci*, and *Corynebacterium diphtheria*. Other applications: tissue culture work, virology, and plant physiology. Available in single-door models with 0.18m^3 chambers and double-door models with 0.37m^3 chambers.

Temperature control system operated by 2 pushbuttons. One button factory set at 37° to 42°C . Other button permits variable dial settings to 70°C . System also has thermistor sensor for control and high temperature hydraulic safety for over-temperature protection. Buzzer and flashing lights warn when control setpoint is exceeded and safety thermostat is controlling temperature.

Air and CO₂ are mixed to minimize CO₂ concentration differences and pre-heated to minimize internal temperature before introduction into chamber. Incoloy heaters, immersed in water, give quick response and efficient heat transfer.

Incubator's gas flow meters accurately de-

termine gas rates, volume changes per hour, consumption, and concentration. CO₂ quick injection system controls air flow and CO₂ concentration. CO₂ recovery timer returns CO₂ concentration in chamber to desired level within minutes after doors are opened and closed. Double-door model has independent CO₂ tension controls for each chamber.

Baked-on enamel finished exterior; stainless-steel, heliarc-welded interior. Triple-wall construction with 5cm glass wool insulation between water jacket and outer wall. Solid-state time proportioning control with thermistor sensor and hydraulic safety. Incoloy immersion heaters. Tempered glass inner door with rotary latch, full length hinge, silicone gasket; outer door with positive mechanical lock and heavy-duty hinge. Built-in air pump. Chamber bottom recessed for addition of water for tests requiring high humidity. Chamber dimensions: 47Dx 52Wx74cmH.

Napco Dry CO₂ Incubators

Use one standard tank of CO₂ at 5% mixture for over 3 months

For application in primary isolation of mycobacteria in pulmonary disease research. Unique National CO₂ injection system permits operation with no outside air source by introducing CO₂ tensions where relative humidity is not abnormally high. 1.8 meter flexible gas line attaches to outlet of CO₂ bottle reducing valve. Use as standard lab incubator by shutting off CO₂ with simple valve. Operates from above ambient to 65°C with $\pm 0.5^{\circ}\text{C}$ uniformity. Hydraulic thermostats. Glass thermometer in safety holder at top of cabinet. Control panel contains purge timer, flowmeter, off-on switch, pilot light. Aluminum interior. Shelves adjustable on 25mm centers. Cam hinge door closing. Enamel exterior. For 120V 50/60Hz. UL and CSA listed.

Air Flow Incubator

Max differential $\pm 0.5^{\circ}\text{C}$ from ambient to 65°C

Air circulation system has max differential of $\pm 0.5^{\circ}\text{C}$ over range of ambient to 65°C even when unit is fully loaded. Air drawn in from heating chamber is distributed throughout work area by ceiling distributor and blower. Heaters completely isolated from work area, designed so that all return air passes over them before entering chamber. Dial thermometer reads within 0.5°C. 2.78m² of shelf space provides ample room for big loads

Ordering Information: Heavy-gauge metal inner and outer walls. Enamel finish. Solid insulation. Door has positive direct acting latch. Six perforated aluminum shelves adjustable on 25mm centers. Controls mounted over door, include regulating and safety hydraulic thermostat dials. Inside, 62Dx79Wx184cmH. Outside, 74Lx92Wx225cmH. For 115VAC, 700w. Shipping wt, 259kg (570 lb)

11-701A2185.00
(National 3512)

11-701A

Anaerobic Incubator

Controls anaerobic samples from ambient to 65°C

For vacuum embedding and drying, tissue fixations, culturing, vacuum storage. Offers close control of anaerobic samples from ambient to 65°C with $\pm 0.5^\circ\text{C}$ uniformity.

Isolated heating elements prevent overheating and hot spots. Barometric pressure adjustable with nomograph. Oxygen and free air reduced to 1.5% with 1 pumping cycle.

Temperature controlled by hydraulic thermostat. Vacuum gas flow-bleed valve sets atmospheric conditions within chamber. 30" (76cm) vacuum gauge (calibrated in $\frac{1}{4}$ " (6.4mm) increments) and valve controls above door. For use with hydrogen atmosphere, explosion-proof diffusion type, metering gas to catalytic agent.

Ordering Information: Steel with enamel finish. Fiberglass insulation. Door has positive locking and viewing window. Two removable perforated aluminum shelves give 0.23m² capacity. Inside, 48Dx31Wx31cmH. Outside, 58Lx43Wx76cmH. For 115VAC, 400w. Shipping wt, 68kg (150 lb).

11-700B1315.00
(National 3640)

For vacuum pump or aspirator needed to operate 11-700B incubator, see pp 986 and 325.

11-700B

CO₂ Control Master

11-686-77

Converts incubator to automatic CO₂ injection system

CO₂ Control Master mounts on top of any constant flow incubator or any incubator without CO₂ to convert it to automatic CO₂ injection system. Maintains CO₂ tension by injecting CO₂ only when desired percentage falls below set point. Percentage is set by control and indicated on direct meter read-out.

Ordering Information: Plug-in connector provided for driving chart recorder. Stainless-steel construction. 24Lx31W x19cmH. For 115V 60Hz, 50w. (Also available for 220V 50Hz.) Shipping wt, 7.5kg (16½ lb).

(National 3636)

Marsters Incubator

37°C nominal temperature

11-717

Marsters Incubator with recessed "Temp-Trim" you can set yourself. "Temp-Trim" permits fine-tune adjustment for laboratory ambient temperatures. Accommodates up to 40 tubes from 10 to 13mm dia, including Kahn, serum, and blood collecting tubes. Unique spring-metal adapters in each well compensate for differences in tube diameter. Has thermistor temperature detector plus solid-state circuitry. Proportional control au-

cally, continuously delivers small amounts of current as needed to maintain temperature you set.

Ordering Information: Mounted on 4 rubber feet. With illuminated removable thermometer. 18Lx24Wx7.6cmH. For 110/115V 50/60Hz. Shipping wt, 5kg (11 lb).

11-717 289 75
(Clay Adams 5380)

Spinbar Box

Assortment of 16 most popular Spinbar magnetic stirring bars in convenient hinged-top clear plastic box. **Cat. No. 14-511-59, \$39.50 each.**

Air Bath Incubator

Circulates forced hot air . . . handles up to 108 test tubes

Features 3 convenient module racks. One 24-place for 13 or 16mm dia tubes up to 140mm long. Two 36-place for 12mm dia x140mm long tubes.
Precalibrated with 37° and 56°C settings, but adjustable between 37° and 70°C with thermostat dial. Temperature uniformity is $\pm 1^\circ$ at 37°C and $\pm 1.5^\circ$ at 56°C. Sixty minute timer indicates end of incubation period with audible signal.

Ordering Information: Air bath with three plastic test tube racks with numbered positions. Thermometer, transparent hood. 36Wx24cmH. For 115V 60Hz. Shipping wt, 7.7kg (17 lb).

Automatic CO₂ Injection System Incubators

Save dollars and time

Water-jacketed incubators with automatic recirculating closed loop system injects CO₂ only when required. Significantly reduces CO₂ consumption, eliminates need for external air supply, provides efficient, economical and improved control in incubation techniques.

CO₂ concentrations from 0 to 25% are dialed on control knob. Direct meter readout provides continuous monitoring of CO₂ level.

Plug-in connections for high impedance recorder allow continuous recording of CO₂ concentration. Closed loop system assures uniform distribution of CO₂. Also controls chamber temperature and humidity. Meets most critical requirements for tissue culturing.

Radiant heat from 5 water-jacketed walls provides $\pm 0.5^{\circ}\text{C}$ uniformity over range of ambient to 55°C . To minimize temperature variation, CO₂ is preheated before entering chamber. Attains relative humidity to 95% at 37.5°C .

Control panel contains CO₂ percentage meter, dial thermometer, pilot lights, water level gauge, regulating and safety thermostats. Automatic purge system reduces use of CO₂ when door is open.

Stainless steel inside and out. Solid insulation in walls and doors. Inner glass door is vapor-sealed. Outer doors have cam hinge closing. Perforated aluminum shelves adjustable on 25mm centers. Top water-fill port. For 115VAC. (Also available for 220V 50Hz). One and 2-chamber models available.

Isotemp® Dri-Bath

Puts an end to non-uniform sample temperatures

Every part of every sample is within $\pm 0.1^{\circ}\text{C}$ of the test temperature. Possible because of the unique sample wells. They're shaped so that the same amount of heat is transmitted to all parts of the sample tube. You don't have the temperature gradient — too hot at the bottom, and too cold at the top — that may invalidate tests in baths with drilled cylindrical wells. Sample tubes rest on insulating plugs that prevent localized heating.

Every sample is within $\pm 0.1^{\circ}\text{C}$ of the set temperature. A 600-watt heater is mounted

on a 6.4mm thick aluminum heat-distributor plate in the floor of the bath. No more "cold ends" of exposed heating elements. Aluminum blocks carry the heat uniformly to all the sample wells.

Fisher Model 145 Isotemp® Dri-Bath accommodates up to 4 of 9 different heating blocks holding tubes from 6 to 25mm dia. Aluminum blocks conduct heat evenly. Keep temperature constant. Because tubes stay dry, Dri-Bath minimizes clean-up problems. Ambient to 125°C with $\pm 0.1^{\circ}\text{C}$ control. Dial temperature control graduated from 25° to

125°C . Ideal for enzyme reactions, inactivation of sera, Rh studies, blood crossmatching, cholesterol determinations.

Ordering information: 23Lx38Wx10cmH. Without blocks (see listing at right).

Trans Temp® Containers

Maintain sample temperature during shipment

Ideal for items (lab samples to frozen food) that must be kept at specified temperatures en route. Meet air parcel post, UPS, airline, and bus parcel size requirements. Available in variety of sizes and storage temperatures.

Sample cavity of container surrounded by core of high-insulating polyurethane.

Controllant canisters (in sample cavity) hold temperature at desired level for extended periods of time. No power source needed. Control-

lants are compounds of harmless inorganic chemicals. Maintain temperatures from -20°C to +36°C.

Offer many advantages over dry or wet ice controllants. Hold temperature longer. Lower shipping costs. No gases or water from melting ice. Store and reuse.

For low temperature retention, freeze sample and appropriate controllant canister at approximately 25°C lower than desired shipping temperature. For high

temperature retention, heat sample and appropriate controllant canister at approximately 25°C higher than desired shipping temperature. Insert conditioned sample and canister in container cavity. Secure top cover with bands. Insert plastic container in its cardboard carton.

Each Trans Temp® Container comes with shipping carton, controllant canisters, polyurethane box with securing bands.

Mailing Containers

Lightweight polystyrene foam

Handy polystyrene foam containers handle samples, slides, tissues. "Snap lock" feature holds contents in place. Can be used again and again.

Mailing sleeves (available separately) are cardboard with reverse tuck style closure. Patient identification slip can be included between foam mailer and sleeve. Sleeves shipped flat. Meet U.S. Postal Regulations.

For Water or Urine Samples

Two-piece assembly with snug-fitting molded cavity inside, rectangular shape outside for easy storage. Holds glass bottles up to 118ml. Inside, 51x51x140mm. Outside, 83x83x160mm. Wall thickness, 13mm. Weight empty, 21g.

3-525Case of 100/34.00

Mailing sleeve for 3-525.
3-525ACase of 200/17.00

Microscope Slide Mailer-Carrier

Individual slots hold up to ten 1x3" (2.54x7.62cm) microscope slides, with or without cover glasses. Specimen surfaces never touch each other. Plug-type lid. 10Lx5Wx6.4cmD. Wall thickness, 13mm. Weight empty, 7.1g.

3-526Case of 300/55.00

Mailing sleeve for 3-526.
3-526ACase of 300/30.00

Single Tube Mailer

Carries sample tubes from 3 to 10ml capacity. Ideal for mailing blood, urine, other lab samples. Two-piece assembly has snug-fitting tube cavity with recessed ends for centrifuge tubes, screw capped or rubber capped tubes. 15x5.7x5cm. Weighs less than 14g empty.

3-527Case of 300/65.00

Mailing sleeve for 3-527.
3-527ACase of 300/30.00

Three Tube Mailer

Similar to 3-527 single tube mailer but for 3 tubes from 3 to 10ml capacity. 13x11x3.2cm. Weight empty, 28g.

3-528Case of 300/51.00

Mailing sleeve for 3-528.
3-528ACase of 300/16.50

3-525

3-526

3-527

3-528

Tissue Mailer

Assures optimum cell and sera preservation. Single well holds tissues, sputum, blood derivatives in tubes, vials, small bottles. Absorbs shock, insulates contents. Inside, 57x44x200mm. Outside, 66x76x240mm. Wall thickness, 13mm. Weight empty, 28g.

3-529Case of 50/30.00

Mailing sleeve for 3-529.

3-529ACase of 100/18.00

3-529

Mailing Containers for Specimens Packed in Dry Ice

One-piece molded styrofoam mailer-shippers with 38mm thick insulating walls. Provide shock resistance and temperature protection. Average dry ice usage is less than 1.1kg per 24-hour period. All units are water-proof, vapor-proof, washable, extremely lightweight. Usable space is large enough for dry ice, tubes, vials, and assortment of laboratory containers. Two styles offered:

3-530

Insulated Frozen Sample Shipper

Laminated fiberboard outer case, molded, one-piece insulation core of expanded polystyrene. Useful for shipping frozen specimens, sera, vaccines, whole blood by parcel post or UPS. Outside, 35Lx27Wx35cmH. Inside, 27Lx19Wx27cmD. 38mm wall thickness. 2kg empty.

3-530Ea/8.25
Case of 8/60.00

Serum Bio-Mailer

Corrugated carton, insulation core, and snug-fitting plugged cover. 38mm wall thickness. When using dry ice, merely wrap tubes or bottles in single face corrugated paper. Inside, 17cm dia x 11cm deep. Outside, 24Lx24Wx18cmH. Weighs 454g empty.

3-531Ea/5.00
Case of 12/54.00

Multi-Purpose Bio-Mailers

One-piece molded styrene foam containers large enough for shipping tubes, vials, and wide assortment of lab containers with dry ice. Ideal for biopsy materials, frozen

tissue, vaccines, nuclear and isotope materials, pathology specimens. Save up to 50% on packaging, shipping, and mailing costs.

Water-proof, vaporproof, lightweight. 3.8cm thick insulating walls. With corrugated outer case to protect styrene foam container.

Air-Evac™ Chemical Containers Minimize Air Contact

Bellows-like reusable containers safely store reagents without storing trapped air. As material is used, container is compressed to keep opening level with liquid. Cap is then screwed back on container. Atmospheric pressure maintains container in compressed position. Helps retard oxidation and deterioration of contents. When empty, container is returned to non-compressed position. Available in two sizes.

Reaction Kettles

PYREX® brand kettles designed for organic reactions involving viscous materials. Wide mouth for easy cleaning of interior.

Covers have 4 openings to accommodate interchangeable $\frac{1}{8}$ joints, allowing quick assembly with condensers, stirrers, funnels. 1000ml sizes have interchangeable covers with four $\frac{1}{8}$ 24/40 joints. 2000, 3000, 4000ml sizes, have three $\frac{1}{8}$ 24/40 and one 34/45 joints. Quick assembly with condensers, stirrers, funnels.

Covers are heavy pressed construction. Lower sections mold-blown for breakage resistance. Finely ground flanges for tight seal.

Complete assembly. (Corning 6947)

Reaction Kettle Accessories

Mantles

Provide heat for reaction kettles

Glass fabric with heating elements embedded in non-flammable cloth. Even distribution of heat up to 450°C. A 9-521-100 powerstat (see page 281) controls heat. Iron-constantan thermocouple built into mantle senses temperature of inner layers. Readings appear on 11-472-65 pyrometer (see page 482). With iron-constantan thermocouple; without powerstat or pyrometer. 115VAC/DC.

Label Glaze . . . Accepts Paint

Label glaze forms clear plastic coating on labels that seals against moisture, dust, and corrosive atmosphere. Resistant to acids and alkalis. Coated label can be washed. In pt (473ml) bottle with applicator.

L-1Pt/3.38
L-1

Label Spray (Aerosol)

Krylon is similar to L-1 but comes in pt (473ml) aerosol can.

11-881Ea/2.49

11-881

Vinyl Label Tape

Sticks to plastics during autoclaving

Self-sticking all-purpose vinyl coated tape. Sticks to glass, plastic, paper, and wood from -57° to +121°C. Especially suited for use in autoclave, refrigerator, deep freeze, sterilizer, and incubator. Easily marked with pencil, pen or ball point, and most felt-tip markers. Removes without residue. Oil-, water-, and acid-resistant.

White Plastic Label Tape

Write-On Label Tape with accessory dispenser provides a convenient yet inexpensive way of labeling bottles, specimen containers, or other lab items. Far more economical than die-cut paper labels.

Tape adheres to glass, metal, polyethylene, or most any lab surface. Withstands temperatures from -73° to +121°C. Resistant to moisture and most solvents. Use any type pen, pencil, or marker. Labels are easily removed. Leave no adhesive residue.

Color, white. In 55m rolls.

11-865-35

Tape Dispenser

For use with 11-865-30 and 11-865-32 tapes. Simplifies preparing different size labels. Writing platform on dispenser designed for right or left hand use. Finger holes in platform make label removal easy. Weighted base eliminates special mounting. With permanent built-in cutting edge. Gray metal construction.

UV Source Lamps

11-983-20

Shortwave Lamp —

1300 μ w/cm² at 15cm

Mineralight produces high intensity illumination (1300 μ w/cm² at 15cm distance) at 254nm. Lamp has quartz grid for maximum transmittance in the UV. Ideal unit for chromatography, photochemistry, sterilization, and geology work.

Ordering Information:

Assembly includes removable lamp supported on a transformer. Unbreakable, lightweight housing, with snap on/off filter frame and filters. 40Lx21Wx12cmH. Tube: 15Lx5.7cmW. Shipping wt, 5.4kg (12 lb); net wt, 3.7kg (8¼ lb). For 115V 60Hz.

11-983-20229.00
(Ultra-Violet Products R-52)

Replacement Filters. Two filters are required for use with 11-983-20 lamp.

11-983-2621.75
(Ultra-Violet Products 62760)

Replacement Tube. Quartz grid tube with 91cm of bent pure fused quartz tubing.

11-983-2783.50
(Ultra-Violet Products 62759)

Shortwave Lamp —

280 μ w/cm² at 15cm

Mineralight Multi-Band Lamp with shortwave (254nm) ultraviolet tube in housing. Produces twice the intensity of any 4-watt lamp on the market today. Intensity: 280 μ w/cm² at 254nm at 15cm distance.

Ordering Information: With 254nm tube. 19Lx7Wx5cmH. Filter size: 5Lx8cmW. Shipping wt, 1.4kg (3 lb). For 115V 60Hz.

11-98444.75
(Ultra-Violet Products UVS-11)

480 μ w/cm² at 15cm

Same as 11-984-2 lamp (at right) except with one shortwave tube. Intensity: 480 μ w/cm² at 254nm at 15cm

11-984

distance. For 115V 60Hz.

11-984-674.75
(Ultra-Violet Products UVS-54)

Longwave Lamp —

7000 μ w/cm² at 38cm

Portable longwave lamp. Produces light intensity of 7000 μ w/cm² at 38cm distance at 366nm with filter. Cuts inspection time, increases efficiency and reduces labor costs. Used as hand lamp or permanently mounted fixture. Rotatable bulb assembly locked securely on base, but can be removed by sliding lamp handle forward.

Ordering Information: With

366nm bulb having 2000 hr life, transformer, filter. Shipping wt, 9kg (19 lb); net wt, 6kg. 115V 60Hz.

11-983-10174.00
(Ultra-Violet Products B-100A)

11-983-10

11-984-2

Longwave Lamp —

700 μ w/cm² at 15cm

Blak-Ray 6-watt lamp with contoured handle. Produces intense UV illumination due to its large filter and specular finish reflectors.

Lamp has longwave (366nm) ultraviolet tube. Intensity: 700 μ w/cm² at 366nm at 15cm distance.

Ordering Information: With snap-on filter frame for photochemical and phosphorescence experiments. Filter size: 15Lx6cmW. Over-all size: 38Lx9.5Wx7.6cmH. Shipping wt, 1.8kg (4 lb); net wt, 0.9kg. For 115V 60Hz.

11-984-249.75
(Ultra-Violet Products UVL-56)

Longwave Lamp —

400 μ w/cm² at 15cm

Same as 11-984 lamp (at left) except with one longwave tube. Intensity: 400 μ w/cm² at 366nm at 15cm distance. For 115V 60Hz.

11-984-4034.75
(Ultra-Violet Products UVL-21)

Replacement Tube for 11-984-40 lamp.

11-984-424.60
(Ultra-Violet Products F4T5-BL)

Shortwave Lamp —

875 μ w/cm² at 2.5cm

Excellent for hard-to-reach areas

11-984-50

Double bore quartz lamp charged with mercury and argon gas. No larger than a pen. Great for inspections of small hose tubing. Produces useful source of monochromatic light (254nm) for calibrating spectrophotometric equipment.

Ordering Information: With 5.5w bulb, 5cm quartz emitting tube. Over-all size: 10 ODx120mmL. Requires 11-984-55 transformer. Shipping wt, 454g (1 lb); net wt, 57g.
11-984-5051.00
 (Ultra-Violet Products 11SC1)

Transformer for 11-984-50 light. Power supply unit provides 800V to start lamp. Drops to 270V when lamp lights. Power consumption: 14w. In enameled steel housing. With 2.4m primary cord, 91cm secondary cord. 115V 60Hz. 14Lx6Wx8cmH. Shipping wt, 1.8kg (4 lb); net wt, 1.4kg.
11-984-5546.50
 (Ultra-Violet Products SCT-1)

UV/White/North Sky Light

11-988

Multi-Ray® lamp has shortwave UV, long-wave UV, white light, and north sky lamps. Changing bulb provides ideal illumination for radiation studies, fluorescence work, criminology, photochemistry, and other applications.

Ordering Information: With operating base, extension rods, reflector. Base with control switch: 10Lx15cmW. Hinged reflector: 31Lx7cmW. 28cm stand with 15cm cross-arm length. Power consumption under 15w. 115V 60Hz.
11-98875.00

Replacement Lamps

Shortwave UV lamp. For 11-988 lamp. Effective for air, surface, liquid disinfection. Produces radiation to 254nm. 115V 60Hz.
11-988-29.45

Longwave UV lamp. For activating large group of fluorescent materials. Produces no radiation shorter than 300nm. 115V 60Hz.
11-988-49.05

11-982

Hand-held, triple-action lamp has 2 longwave UV tubes, 2 fluorescent white light tubes, plus a 5x10cm high resolution magnifier. Color-coded switches for UV light or white light. All 4 tubes can be operated at once.

Ordering Information

Portable Combination UV Lamp with 2 filtered UV tubes, 2 white light tubes, and magnifier lens. Bakelite™ handle with friction lock swivel joint. Rugged Lexan lamp housing 15Lx18Wx6cmH. Net wt, 1.1kg. UL listed. For 110-120 50/60Hz.
11-98274.50

Portable Lamp with Pedestal Stand. Same as 11-982, except with sturdy metal stand. Lamp handle fits in stand to free both hands. Lamp instantly removable for hand use.
11-982-484.50

Doing UV Absorbance Work?

Fisher offers a complete line of spectrophotometer cells including Suprasil cells with Teflon covers or stoppers. See pp 1101-1105.

UV Intensity Meters

Precise to 5% of reading

11-984-53

Magnifying Illuminators, see p 538.

For Longwave Light

Hand-held photovoltaic device that measures UV intensity. Two ranges are: 0-1200 μ w/cm² and 1000-6000 μ w/cm². Consists of sensor cell attached to compact metering unit. Operates at 365nm.

Can be used remotely, hand-held, or placed directly in radiation path. Insensitive to visible light.

Ordering Information: With calibrated certification slip, sensor cell, reduction screen, extension cord, contrast filter, instructions. 7Lx7.3Wx8cmH. Shipping wt, 2kg (4 lb); net wt, 454g.
11-984-53159.00
 (Ultra-Violet Products J-221)

For Shortwave Light

Same as 11-984-53 meter except operates at a wavelength of 254nm. Checks efficiency of germicidal lamp installations.

11-984-54169.00
 (Ultra-Violet Products J-225)

Sodium Vapor Source Lamp

Produces intense source of sodium radiation of about 85 candlepower. Permits needle-sharp focus, eliminates glare, generates less heat.

From a cold start, lamp produces full candlepower after 30 min. In 10 min, produces sufficient intensity to begin work. When fully operating, lamp produces 650 lumens in 588-589nm area.

Transformer and on-off switch built into supporting base. Rod extending from base provides stand for lamp housing. Removable lamp housing has 3Wx5cmH opening with filter holder for 13cm² glass filters. Lamp can

be rotated 360°. Vacuum flask around lamp retains heat necessary for proper operating temperature.

Ordering Information: Base 16Lx15Wx15cmH. Lamp housing 10 dia x 20cmH. Average life of bulb, 500 hr. Net wt, 5.4kg. 110-120V 60Hz.

Fluorocarbon Lubricant

Forms slippery, frictionless film of tetrafluoroethylene (TFE) on plastics, rubber, wood, and metal. Prevents galling, freezing, abrasion. Ideal for tapered glass joints, stopcocks, microscope tracks, clamps, stirrer bearings, bolts, slide rules.

Adhesive and durable. Chemically inert, greaseless, odorless, non-flammable, non-staining. Retains lubricating properties and releasing qualities to 260°C. Will not pick up dust. In 16oz (454g) spray can.

12-008-8Ea/3.60
Case of 12/36.45

Stopcock Greases. See p 1129.

12-008-8

12-040

Single Lens: 5X

Handy Pocket Magnifier has large field of vision, provides 5X magnification. One 24mm dia lens in break-resistant Vulcanite mounting. Fold-over case.

12-0403.00

12-045

Double Lens: 5 and 10X

Double Lens Pocket Magnifier enlarges to 5X and 10X power. Two 27mm lenses used singly or together. Protective fold-over case. Vulcanite mountings.

12-0453.85

12-050

Triple Lens: 5, 7, 10X

Lenses are 17, 20, and 20mm. Seven different magnifications possible with 5X, 7X, and 10X lenses. Use singly or together. Vulcanite mountings. Fold-over case.

12-0508.00

Thermometer Magnifier

Read easily at 1.2 to 1.5m distances using convenient thermometer magnifier. Fits 6 to 10mm thermometers. Grips securely with spring metal clips, slides up or down out of the way. Clear plastic construction with etched hairline for quick temperature change reference. 76Lx13mmW.

12-053Ea/4.50
Pk of 12/48.00

Magnifier with Reticle

Easy, accurate measuring of extremely small objects with reticle-equipped pocket magnifier. One black and one white reticle for obtaining optimum contrast: 1/2"L (13mm) with precise 0.005" (0.13mm) graduations. Positioned 0.003" (0.076mm) from object to eliminate parallax. May be used without reticles as simple magnifier. Rough and fine focus capabilities. With protective plastic carrying case.

12-05620.50

12-056

Magnifiers Contd.

Fixed Focus: 5X

12-064-10

Sharp, clear image for thread counting or biological applications with fixed focus magnifier. 5X power, fold-out construction, durable.

12-064-1030.00

APHA Magnifier

12-060

Count bacteria quickly with APHA approved magnifier and counting glass. Two plano-convex lenses for a flatter, better image; dia is 40mm, magnification is 3½X.

12-06010.50

Pocket Microscope

Quick 40 to 60X magnification for less critical work with pocket microscope. Eliminates involved setup necessary with table-mounted microscopes. Adjustable focusing tube, 152Lx19mm dia. Black enameled barrel, protective leather carrying case.

12-070-10Ea/45.50

Case of 4/163.75

Tripod Magnifier

12-055

Examine tissue, etc for elementary level work in biology with tripod magnifier, 8X-magnification, wide field of vision, 25mm lens dia. Tripod and lens mount are threaded for focusing.

12-0554.50

Hand-Held Magnifier

12-070 A-C

Magnifier makes reading small print easier. Lens mounted securely in nickel-plated rim. With convenient black finished handle.

Lens Dia	Cat. No.	Ea
51mm	12-070A	3.75
76	12-070B	5.25
100	12-070C	7.75

12-070-10

Table-Top Magnifier-Illuminators

For 3 Fluorescent Tubes

Minimize eyestrain commonly associated with doing close, detailed work by using this portable, adjustable magnifier-illuminator. Fixture combines a 13cm lens, having 3X magnification at 33cm, with three fluorescent tubes for reduced shadows. Unit can be clamped temporarily or mounted permanently to most desks, adjust to reach 86cm from point of attachment. Counterbalance system

to provide stability in any position. Unit operates on 115V 60Hz. Without fluorescent tubes. With 3-conductor cord and plug.

12-071-181.75

Fluorescent Tube

For 12-071-1.

Pk of 24/ 72.00

For Circular Fluorescent Tube

Illuminate detailed work evenly for better viewing with circular magnifier-illuminator. Otherwise, fixture is similar to 12-071-1. Without circular fluorescent tube.

12-071-778.75

Fluorescent Tube

Circular, for 12-071-7 magnifier-illuminator.

12-071-9Ea 5.85

Case of 12/63.18

Measures and Calipers

New Metric Conversion Computer

A full function calculator with memory. Instant, accurate answers for 126 types of metric conversions. Simply enter metric or U.S. units, press convert key, read exact answer with decimal. Converts length, area, weight, volume, liquid measure, temperature.

Adds, subtracts, multiplies, divides. Fully addressable memory and memory recall. Overflow indicator, % key, negative indicator, chain calculation capability, floating decimal, 8 digit logic, and LED display.

12-099

Ordering Information: With nickel-cadmium battery, 115V adapter and recharger, carrying case, and instructions. Wt. 0.16kg (5.5 oz). Size: 10x8cm.

12-09949.50

Steel Tape Measure 120" (300cm) Long

12-112

Measure to $1/16"$ or 1mm. 120" or 300cmL. Rewinds automatically. Tape projects rigidly like a rule because of concave shape. With convenient hook on end.

12-112Ea/4.75
Case of 6/25.65

One Meter (3.3') Ruler

12-095

Scaled on one face in cm with 1 mm graduations . . . on the other, inches with $1/8"$ graduations. Hardwood. Brass ends. FISHERbrand.

12-095Ea/2.65
Pk of 12/28.50

Meter stick without brass ends. Otherwise similar to 12-095.

12-096Ea/1.50
Pk of 12/16.20

12" (300mm) Ruler

12-090

Dual-scale rule. Length is 12" (300mm). $1/16"$ (1mm) graduations. Brass strip inserted for straight-edge work. Grooved on top to hold pencil. Protractor on back. Hardwood. FISHERbrand®.

12-090Pk of 12/4.85
Case of 144/52.00

6" (150mm) Ruler

9-016

Blue vinyl. Graduated 0 to 6", 0 to 150mm. Temperature conversion scale over -20° to $+100^{\circ}\text{C}$ and -10° to $+212^{\circ}\text{F}$ ranges. Determines cork and stopper sizes.

9-016Pk of 100/16.00

12-097

Vernier Calipers

Dial-Type with Metric Scale to 130mm

12-122

Dial graduated 0.1mm increments to 130mm. Adjustable for zero and differential measurements. Clear numerals permit estimations to half division. Polymeric plastic.

12-12215.20

I.D. and O.D. Gauge

Metric Diameter Gauge for tubing, rods. For I.D., slip tube over series of pin type projections . . . find closest fit. For O.D. fit tube to series of wells. O.D. and I.D. range: 1.5 to 16mm. Polypropylene. 120Lx50Wx12mmH.

12-097Ea/4.00
Case of 12/45.60

Double Scales to 130mm

12-120

Vernier caliper with 130mm scale in 0.1mm subdivisions. Plus 5" scale in 0.001" divisions. Quick, simple thumb roller. Polymeric plastic.

12-1208.60

Double Scales to 120mm

Measures I.D., O.D., and depth. Metric and English measurement range from 0 to 120mm in 1mm divisions. 0 to 5" in $1/16"$ divisions.

Readable on vernier scale to 0.1mm and $1/128"$. Fast roller adjustment. Polished steel.

12-13011.50

Micrometer Calipers

12-125

Metric Scale

0 to 25mm range with metric micrometer calipers. Friction stop causes adjustment knob to slip at the same pressure each time, ensuring reproducibility. Reads to 0.01mm.

12-12525.00

English Scale

English scale micrometer is useful over 0 to 1" (0 to 25mm) range, readable to 0.001" (0.025mm). Otherwise similar to 12-125.

12-12625.00

Fisher's Educational Materials Division carries over 100 different biological models. From the superbly detailed model featured here (Cat. No. S17153) to economical desk top models. Prices range from \$30 to \$3400. Contact your local Fisher branch for more information.

Fisher Scientific Company

Jewett's New Blood Bank Refrigerators With Temperature Surveillance Modules

All models have dual controls, factory-set to produce and maintain cabinet temperature of 2° to 4°C. Automatic off-cycle defrosting. Built-in condensate evaporator eliminates need for floor drain. Has dual circulation fan and stainless-steel, removable, adjustable drawers with perforated bottoms and full extension, ball-bearing slides.

Decorator designed, reach-in refrigerators. Compatible with contemporary lab furniture. Triple-pane, full-view, cloud-proof, plate glass door. Exterior — grey ripple enamel with blue door frame and surveillance panel. Interior — white enamel with neon light. Vapor-sealed 51mm polyurethane insulation. 115V 60Hz. In four sizes, 1 and 2 door models.

- Temperature surveillance module panel (see features at right)
- Bottle in bracket for solution temperature sensors
- Dual circulation cooling fan
- Stainless-steel, removable, adjustable drawers with perforated bottoms and full extension, ball-bearing slides
- Inventory control label holders
- Triple-pane, full-view, cloud-proof, plate glass door
- Neon illuminated interior, full height

Temperature Surveillance Module Highlights

- 1 Digital display, solution temperature
- 2 Air temperature selector upper interior button
- 3 Indicator light for solution temperature (on except when reading cabinet temperatures)
- 4 Air temperature selection button (lower interior)
- 5 ON/OFF switch, digital display
- 6 Temperature monitor indicator for low (below 1°C), safe, and high (above 6°C) conditions of stored contents
- 7 Power on and power failure indicator lights
- 8 Temperature monitor audible signal with timer reset switch
- 9 Battery test switch
- 10 Audible signal (alert if temperature exceeds acceptable range — or if door is ajar)
- 11 Door ajar indicator light
- 12 Door ajar audible signal with time delay and reset switch
- 13 Interior neon light switch
- 14 7-day recording thermometer with continuous flow inking (optional accessory; see 13-987-10 on this page).

Jewett Undercounter Blood Bank Refrigerator

97-970

Ideal for storing daily blood supply in small hospitals and clinics. Holds forty plastic bags or 50 blood storage bottles.

Alarm system gives both audible and visible warnings if temperature of contents falls below +1°C or rises above +6°C.

Neoprene thermo-break device eliminates condensation. Automatic defrosting. Dual automatic thermostats pro-

duce and maintain cabinet temperatures between 2° to 4°C.

Ordering Information: Stainless-steel cabinet fits flush with other base units. Without counter top. Two stainless-steel drawers operate smoothly on Delrin rollers. 1/2hp compressor. Capac, 0.15m³. 61Lx64Wx91cmH. 115V 60Hz. 97-9701400.00

Accessories for Blood Bank Refrigerators

13-987-22

Blood Temperature Monitor

For any blood bank refrigerator. Just immerse sensor into storage blood bottle in refrigerator. Gives both audible and visual warning when stored blood temperature is out of 1° to 6°C range. Easily mounted to wall. 120V 60Hz.

13-987-22168.00

Plasma Freezer Temperature Monitor

Same as 13-987-22 but for plasma freezer. Warns when plasma temperature rises above -20°C.

13-987-24168.00

13-987-10

Seven-Day Recording Thermometer

For all blood bank refrigerators. Place sensor in storage bottle in refrigerator. And record temperatures from -12° to +42°C for seven days. Uses 20cm dia chart. With 100 charts and ink.

13-987-10225.00

Charts for 13-987-10.

Fisher Model 245 Rh Typing Viewer

For glare-free blood typing and cross-matching

Dependable, convenient heat and light source. Illuminates antiserum and albumin-control microscope slides with soft, glare-free fluorescent light. Slides reach specified test temperature of 37° to 39°C within 2 min (required by American Association of Blood Banks). Temperature of process plate itself reaches uniform 45° to 50°C. Built-in mercury glass thermometer lets you quickly check exact plate temperature. Adjustable thermostat regulates process plate temperature.

Cradle-type chassis facilitates tilting viewer back and forth while observing for agglutination. Ample 31x7.6cm translucent plastic process plate. Raised rim along all 4 sides prevents slide slippage and possible specimen loss. Plate is secured by spring clip — quickly removed for cleaning.

Ordering Information: Over-all, 37Lx11Wx12cmH. Viewing area, 31Lx7.6cmW. 110-120V 60Hz.
11-91095.00

Rh View Box

With adjustable temperature control

A compact bench unit that performs Rh slide tests according to American Association of Blood Banks specifications. Consists of fluorescent glare-free lighted stage on pivots, built-in thermometer graduated from 45° to 50°C and adjustable temperature control.

Thoroughly mix antisera and blood. Place slide on view box surface. Solution temperature will reach 37° to 39°C within 2 min. Observe microscopically for agglutination.

Box also used for viewing elec-

tron micrograph plates, precipitates, bacteria colonies, non-esterified fatty acid filtrations.

Ordering Information: View area, 24Lx8cmW. Over-all, 31Lx10Wx8.9cmH. Shipping wt, 2.3kg (5 lb); net wt 1.6kg. 120V 60Hz.

AutoAnalyzer® Reagents and Supplies Contd.

Assayed Serum for Automated Analyses

Each lot of this lyophilized human serum is analyzed by several independent laboratories using automatic analyzers and procedures for which serum has been prepared.

Assays made for following 18 serum constituents: albumin, alkaline phosphatase, total bilirubin, calcium, carbon dioxide, chloride, cholesterol, creatine phosphokinase (CPK), creatinine, glucose, lactic dehydrogenase (LDH), inorganic phosphate, potassium, total protein, sodium, glutamic oxaloacetic transaminase (GOT), urea nitrogen, and uric acid.

Results of these assays plus lot number are printed on certificate enclosed with each carton. Reported assay values are mean values of replicate assays performed under rigid specifications.

CS-905		
Quantity	Cat. No.	Ea
25x50ml	CS-905	326.75
25x25	CS-906	234.50
25x10	CS-907	152.50

Unassayed Serum for Automated Analyses

Each vial of reconstituted human serum is carefully pooled so variations in individual blood constituents are statistically averaged to mean of normal population.

Fisher Reference Serum eliminates danger of accidentally using an atypical reference. Saves time, work, and expense of making your own reference serum.

Ranges for 20 constituents: alkaline phosphatase, albumin, total bilirubin, blood urea nitrogen (BUN), calcium, chloride, cholesterol, carbon dioxide, creatinine, glucose, creatine phosphokinase (CPK), glutamic oxaloacetic transaminase (GOT), total iron, lactic dehydrogenase (LDH), magnesium, inorganic phosphate, potassium, total protein, sodium, and uric acid.

CS-901		
Quantity	Cat. No.	Ea
25x50ml	CS-900	278.75
25x25	CS-901	172.75
25x10	CS-902	136.00

FISHERbrand® Manifold Pump Tubing

For all models of Technicon AutoAnalyzer®. 4mm lengths have color-coded wishbone bridges, placed to give 15cm center pumping section. ID, OD, wall thickness closely controlled.

Standard and "solvent flexible" tubing available. Solvent flexible yellow vinyl tubing yields longer pumping life when solvents are being used.

Standard flexible tubing: 41cmL

Accu-Rated Manifold Pump Tubing

Specially formulated polyvinyl chloride tubing for Technicon AutoAnalyzers®. Optically measured to assure consistency of ID and OD. Accurately evaluated to determine flow rate using AutoAnalyzer pumps. Also, eliminates phasing problems and adjustments on 12/60, 6/60, 12/Jr. and Flex systems.

In 41cm lengths with dual color-coded wishbone bridges.

Sample Cups for Other Analyzers

For Abbott ABA-50 and ABA-100 Chemistry Analyzers. Clear virgin polystyrene. Disposable. 0.95 ODx3.8cmH.
2-544-60 Bag of 1000 13.50
Case of 10 bags 119.50

For Electro Nucleonics (Gemsac), Union Carbide (Centri-Chem), Aminco, Beckman-System I Analyzers. Clear polystyrene. Disposable. Conical bottom. Capac, 0.25ml.
2-544-65 Bag of 1000 13.50
Case of 10 bags 121.50

Intake Filters for AutoAnalyzers®

Intake filter for continuous filtration of reagents used in automated analysis, and in manual procedures.

Filters particulate matter to 10 μ particle size. Polyethylene. Filtration life is 12 hours to 3 weeks, depending on reagents. Reduces false pen response; easy to install and replace; needs no priming. Fits intake lines on Technicon single and dual channel, 12/60, 6/60 AutoAnalyzers. Fits all Oxford pipettors.

9-995-5.....Box of 55/13.75

9-995-5

Screening Tubes Minimize Clot Formation

Screening tubes of chemically clean polypropylene. Resin-washed filters minimize clot formation in serum samples after centrifuging. Won't affect normal values. Also eliminate costly downtime, pipet work when using automated equipment. Graduated in 0.5ml divisions. 1000 per case.

11-387-50Case/62.70

Ion exchange column. Similar to 11-387-50 screening tubes, but with 1ml/40sec flow rate filter. With 2ml graduated funnel.

11-386-500.....Pk of 50/12.85

Oxford Pipettors. See p 973

14-190-184

13-678-6

Switchflow® Valve For AutoAnalyzers

Switchflow® valve switches flow of reagent to wash solution in continuous flow analyzers. Eliminates changing supply lines from reagent to water, mixing up lines, contaminating distilled water with reagents. Single-control lever with 3 positions: Reagent (reagent enters system) . . . Off (cuts liquid and air flow; prevents backflow) . . . Wash (distilled water or wash solution enters system). Attaches to AutoAnalyzer proportioning pumps I, II, or III and converts flow in 9 pump lines. Teflon® and polypropylene lines housed under Plexiglas cover. Nipples fit standard tubing. No seals between moving parts.

14-190-18098.50

Brackets and clamps for pumps. For supporting Switchflow valve on AutoAnalyzer proportioning pumps.

For Pumps	Cat. No.	Ea
I	14-190-181	19.50
II and III	14-190-182	19.50

Reagent/Wash Valve

For replacement in SMA 12/60 and 6/60. Complete with 11 check valves and bracket.

14-190-189350.00

Unidex™ One-Way Valves

In-Container Valve. Place at intake end of reagent supply line of basic AutoAnalyzer unit. Protects fresh reagents from contamination. Easily installed. Self-cleaning. With Teflon® weight.

14-190-188.....Pk of 6/18.00

Filter Holder. For use with 14-190-188 valves. Prevents particulate matter from entering system. With O-ring and filter disc.

14-190-186.....Pk of 6/14.00

In-Line Check Valve. For all basic AutoAnalyzer® units and SMA® 12/60 systems. Insert before quick-disconnect device or immediately above reagent/wash valve. Prevents cross-contamination of reagent and distilled water. Easy to install. Self-cleaning.

14-190-187.....Pk of 6/15.00

Filter Keeps Sample Lines Clear

Filters reagent as it enters system. Prevents particulate matter from entering sample lines. No need for manual filtration. Place at intake end of reagent supply line. Uses 14-190-185 filter discs. With reagent filter and weight assembly.

14-190-184.....Pk of 6/24.00

Filter Discs.

14-190-185.....Pk of 50/12.50

FISHERbrand® Pasteur Pipets

FISHERbrand® Pasteur pipets so economical, it's cheaper to throw them away than to wash and re-sterilize them. Uniform bore, ideal for transferring samples to sample cups and for drop counting. Tip openings range: 0.93 to 1.3mm. Conform to government specs in design, style. Top, tip, free of sharp edges. Can be cotton-plugged. Carton top flips back, tilts carton into convenient dispensing position. 360 pipets per box.

Length	Cat. No.	Box of 360
15cm	13-678-6A	7.70

For Perfect Mixing in Cuvets

Unique magnetic centrifugal stirrer fits into standard 10mm light path spectral cells. Provides rapid vertical and horizontal mixing with aluminum vortex when placed on magnetic stirrer. Centrifugal pumping mixes without aeration. Photometric measurements can proceed uninterrupted while reagents are added.

14-511-724.00
Case of 50/190.00

Motor Stirrer for AutoAnalyzer®

8-669-10

Replacement stirrer for heating bath and dialyzer modules on all basic AutoAnalyzer® Systems. Specs: 0.45A and 1550 rpm. 115V 50/60Hz. 8-669-10.....38.00

Perforated Chart Paper

Clearly numbered to show how many charts remain on a roll. 37m per roll. Some 40 additional charts in stock. Call your nearest Fisher branch for complete listing. We are happy to personalize charts to fit your needs.

AutoAnalyzer® Reagents and Supplies Contd.

Dialyzer Supplies

Dialyzer Plates

Multi-channel SMA and AA-II dialyzer plates are manufactured from the finest grade Lucite to prevent warping and to insure required proper dialysis and positive membrane fit. Sold only in sets to guarantee required flow characteristics. Improved nipple connectors are employed to prevent breakage and prolong life of the plates.

Round Plates for Basic Systems

IEC Centrifuge Rotor Holds Trays from Automatic Analyzers

Just snap a multi-sample feed tray from your AutoAnalyzer®, liquid scintillation counter, or RIA pipetting system into the 2-piece carriers of these IEC centrifuge horizontal rotors. Then put rotor directly into an IEC centrifuge. Samples remain in instrument's linear trays throughout centrifugation. Eliminates tube-by-tube sample transferring. Increases efficiency of any automatic procedure. Both rotors fit IEC Models K*, CU-5000*, CRU-5000, PR-6000 centrifuges.

Handy Pocket-Size Mini-Timer

Ideal for chemical reaction timings, photographic work, titrations, petroleum labs. Time settings from 1 to 60 min. Rings at end of timing cycle.
Cat. No. 6-659
Price: \$12.60

Oxford T-4 Column Chromatography System

For Thyroxine Iodine Determinations

A truly low cost, routine procedure. Recovery of thyroxine greater than 98%. Precision, better than $\pm 3\%$.

Simple and versatile — takes only 12-18 min of technologist's time. Can be performed by manual or automated colorimetry. Sample size required for either method: 1.0 or 0.5ml serum.

Disposable pre-loaded columns and reagents are conveniently packaged together. Thyroxine standard available as well as column holding racks, column funnels, and individual component reagents.

T-4 Reagent Set

Includes 100 pre-filled disposable ion-exchange column elements, plus the various chromatography reagents and colorimetry reagents, listed below, in quantities sufficient for 100 tests. Note: T-4 Control is not included in set; must be ordered separately.

11-387-40Set/67.00
(Oxford 0950)

Thyroid Profile Control Serum

For establishing T-4 curves. Also valuable as control serum for PBI, T-3, T-4. Reconstitution volume: 5ml per vial. Before reconstitution, stable for 24 months. After, for several days.

With 2 vials ea normal and elevated control in lyophilized form.

11-387-57Set/9.75
(Oxford 0960C)

Accessories for T-4 System

Prefilled resin columns. Disposable.

YSI Model 23A Glucose Analyzer

YSI Model 23A Glucose Analyzer determines glucose from 0 to 500mg/dl using 25 μ l sample of plasma, serum, or whole blood. Ideal for routine and emergency use in hospital labs, clinics, and medical centers.

Two-step procedure. Push "Clear" button to prepare analyzer to receive sample. Inject sample with syringe. Within 40 seconds, glucose value appears on linear digital readout. Push "Clear" button again . . . ready for next sample.

Calibration just as simple. Push "Clear" button. Inject standard. Push "Calibrate" button. Adjust knob to calibration value.

Ordering Information: Solid-state bench-top instrument with programmed operation. Recorder output on back panel. 33Lx 21Wx31cmH. With probe, buffer, standard solutions, ferrocyanide, injection syringe, sample cups. 115V 50/60Hz.

Preventive Maintenance Kit. For semi-annual servicing of Glucose Analyzer. Kit includes: 500ml polyethylene bottle with screw cap, 5 silicone rubber diaphragms, 7 O-rings, plunger assembly, 6 septum cords, 2 labels, 25cm silicone rubber tubing, micro-bore rubber

vinyl assembly, and supply filter.
11-396-1625.00

Glucose Membrane. Replacement membrane for glucose probe.

11-396-18Pk/15.00

Eyetone® Reflectance Colorimeter

Quantitates glucose in blood

Small, lightweight, portable, line-operated instrument has built-in light source. Specially designed for use with Dextrostix® Reagent Strips — provides quantitative measurement of glucose in whole blood. Rapid, accurate determinations of blood glucose levels are easily read on precisely calibrated meter that covers range of 10-400mg glucose per 100ml of whole blood.

Fast, simple procedure: just apply large drop of capillary or venous blood to Dextrostix Reagent Strip. Wait 60 seconds and rinse with water. Blot reagent area of strip with tissue and insert into Strip Guide. Press lid firmly in center and observe needle. Record blood-glucose level from meter reading.

Ideal for office and hospital screenings, multiphasic screening

centers, for determining neonatal hypoglycemia, coma differentiation, adult hypoglycemia, dumping syndrome, and for maintaining patient management and surveillance.

Specifications

Meter Scale Range:
10mg/100ml, 400mg/100ml for whole-blood glucose

Power Requirements:
115 or 220 VAC 50/60Hz

Power Dissipation:
less than 3 watts per test

Lamp Life:
approx 10,000 hours

Dimensions:
180Lx110Wx50mmH

Weight:
approx 1.2kg

11-397

Ordering Information: Supplied with one bottle of 6 Reference Strips for standardizing and operating manual.
11-397395.00

Dextrostix Reference Strips.

Bottle of 6.
11-397-56.90

Dextrostix Control Set. Contains 3 vials of calibrating standard and 3 vials of control.

Safety First

A 64-page manual of what it takes to satisfy OSHA — plus valuable chapters on accident prevention, first aid, firefighting. Illustrated. Check 2 on reader service card at end of blue index pages.

Fisher Scientific Company

Corning Model 940 Calcium Analyzer

Less than 1 minute per test
Less than 10 cents per test

9-311-350

Perfect back-up for nights and weekends when you're not using your multi-channel analyzer. Start-up time: less than 5 minutes.

Simply pipet 20 to 100 μ l of serum, plasma, or urine into cuvet. Close cover and push "Titrate" button. Titration proceeds automatically. When calcium has been chelated by EGTA and the fluorescence quenched to predetermined level, titration stops. Results are displayed electronically in mg/% or mEq/liter units.

Calibration is simple and fast. Titrate 2 calcium standards. Record results. If results agree with prescribed limits, push "Calibrate" button.

Ordering Information: With accessory kit containing 2 bottles of potassium hydroxide, 1 bottle of calcium standard, 1 bottle of EGTA, 1 bottle of calcein, instruction manual, stopper assembly, spare parts kit, 2 cuvetts, and other items. 34Lx25Wx33cmH. 110/220V 50/60Hz.

Calcette™ Calcium Titrator

Only 1 minute per test

9-311-400

Automates calcein fluorometric method for calcium determinations — only 1 minute per test. Eliminates manual pipeting, plus cost of pipets or tips. Ideal as back-up for automated systems, for night analyses, or stat determinations.

Uses 80, 40, or 20µl samples. Two ranges: 0.50 to 70.00mg/dl and 0.25 to 35.00mEq/liter. Precision at 10mg%; 0.7% for 80µl sample, 1% for 40µl sample, 2%

for 20µl sample. Reproducibility at 10mg%, ±0.05.

Disposable calcein reagent cells (pre-packed with calcein and potassium chloride) simplify procedure, reduce contamination. Up to thirty 80µl samples can be analyzed with one reagent cell . . . "Refill" light on control panel indicates need to replace cell.

Insert calcein reagent cell with fresh reagents into titrator. Select sample and unit range. Place

sample container beneath built-in sampler. Push "Sample" button to aspirate set volume into reagent cell. At end of aspiration, red light turns on. Wipe sample tip. Push "Titrate" button to begin titration. At end of titration, "Read" light turns on. Read sample concentration from cold discharge digital readout. Results locked on digital display until next sample is aspirated.

Ordering Information: Instrument complete with reagents for over 700 titrations. Includes three 8 oz (237ml) bottles of potassium hydroxide, 8 oz (237ml) bottle of EGTA titrant, 4 oz (118ml) bottle of calcium standard, pk of 24 calcein reagent cells, instruction manual. 31Lx64Wx25cmH. Buchler Digital Chloridometer®

Manual or automatic chloride determinations

9-311-150

Chloridometer® makes chloride determinations based on coulometric principle of titration for concentrations from 1.0 to 999.9mEq/liter with ±0.1% reproducibility and ±0.5% accuracy. Titrates micro samples of 0.01ml or less.

Place prepared sample with reagent mixture on sample holder. Place electrodes in container. Set titration switch to manual or automatic mode. Select current level, either high for direct reading with 0.1ml samples or low for 0.01ml samples.

During testing period, silver ions are generated electrically at silver anode. Silver ions react with chloride ions from the prepared sample and form insoluble silver chloride. When all chloride present in sample has precipitated, excess free silver ions then produced are sensed as current increase at indicator electrode. Reaction stops and 4-place digital readout shows actual chloride concentration in sample.

Ordering Information: Aluminum housing with white baked enamel finish. Reversible platform holds 2 sizes of titration vials. Blank adjustment control compensates for changes in reagent mixture.

22Lx21Wx22cmH. With 200 vials 20 dia x 40mmH; 100 vials 25 dia x 40mmH; 3 vials of gelatin reagent; electrode cleaning kit; rinse bottle; instrument cover; instruction manual. 115V 60Hz.

9-311-12217.25 (Buchler 4-2024)

Gelatin Reagent. Vial containing gelatin, thymol blue, thymol in 60:1:1 mixture. Used for dissolving in 1 liter of distilled water for chloride titrations. In 6.2g vial.

9-311-1265.40 (Buchler 4-2028)

Corning Micro-Macro Chloride Meter

Direct-reading and digital

9-311-325

Model 920M Direct-Reading Digital Micro-Macro Chloride Meter determines fast and accurately chloride concentration from 20 to 350 mEq/liter for 100 or 20 μ l of sample. Less than 30 sec needed for each chloride determination.

Place beaker with 15ml of acid buffer on sample platform. Lower electrodes into solution. Add 20 or 100 μ l of sample into beaker. Depress "Titrate" button. Digital display automatically resets to zero; stirrer automatically starts.

After 4-sec delay for mixing, current passes through sample by way of 2 generating electrodes. Silver ions are released from anode and combine with chloride ions in sample during titration. Digital display registers 1 count every quarter sec. In that time, silver ions introduced into sample combine with 1mEq of chloride.

When all chloride has been precipitated, free silver ions in solution cause change in conductivity which is sensed by indicating electrode. Digital readout stops to display concentration.

To make next measurement, pipet 20 or 100 μ l of sample directly into beaker with old reagent and sample. Use old reagent until 2000mEq have been titrated.

Ordering Information: Attractive, compact case. Automatic zero reset, automatic blank setting. 13Lx31Wx22cmH. With 2 bottles of acid 9-311-328 buffer containing chloride; 9-311-307 chloride standard; 9-311-315 silver anodes; 9-311-317 silver electrodes; 9-311-309 electrode polish; two 20ml beakers; 250 100 μ l disposable micro pipets; 250 20 μ l disposable micro pipets; instructions. Net wt, 4.5kg (10 lb). 110V 60Hz.

Orion Skin Chloride Meter

Provides Screening Test for Cystic Fibrosis

Skin Chloride Measuring System for cystic fibrosis based on sweat induction by pilocarpine iontophoresis and measurement of sweat chloride by ion-specific electrode.

Only five minutes needed. Clean testing area, either forearm for children or interscapular area for newborns. Place moistened pad of electrolyte and pilocarpine (a sweat-inducing agent) with sweat induction cuff on arm. Electronically-controlled current carries pilocarpine into skin. Place electrode on test area. Read chloride level directly on meter in milliequivalents per liter.

Ordering Information: With Model 417 Chloride Meter; combination chloride electrode; iontophoresis block with cuff; plastic tray for meter and reagents; box of 20 sets of electrolyte and pilocarpine pads in foil packets; standardizing solutions; rinse bottle and gauze pads; dust cover. Battery-operated.

Oxford® Model 700 Titrator

60-second chlorides
60-second bicarbonates
60-second calciums

TitraChem™ is semi-automatic. Handles 3 types of titrations at a price comparable to instruments that perform only one. Ideal primary system or back-up for multi-channel analyzers . . . also for stats and night labs for 24-hour intermittent testing.

Minimal set-up time. On electronic standby it's ready for testing in less than a minute.

You can switch from one test to another in just seconds.

Concentration displayed digitally — mg/% for calcium; mEq/liter for bicarbonate and chloride. Based on dead-stop photometric titration method modified to prevent errors from spectrophotometric variation. As you add indicator solution to cuvet (with constant volume pipetter supplied with system), photometric signal proportional to transmittance of light through cuvet is electronically stored. Addition of sample causes photometric signal to change.

Endpoint is indicated when photometric signal reaches level of stored signal. Concentration is

read from digital read-out. System automatically corrects for gradual change in reagent condition, lamp intensity, and cuvet transmission.

Ordering Information: Bench-top instrument with modular electronic circuit boards. Output jack for analog recorder. Illuminated digital control panel. 29Lx44Wx36cmH. With four 3ml dispensers and 100 disposable polypropylene tips, waste evacuation stopper assembly, 4 titrant reservoirs, dust cover, instruction and procedure manual. 115/230V 50/60Hz.

SepaRite™ Sampling Tubes

Remove Fibrin from Blood

Disposable SepaRite™ sampling tube filters fibrin and debris to 10µm from serum or plasma; acts as transfer tube for filtered specimen.

Eliminates probe blockage on automated analyzers and diluters. Saves sample preparation time. Reduces or eliminates second centrifugations, handling and labeling of additional tubes.

To use as filter tube; insert SepaRite tube into centrifuged specimen. Allow filtered sample to rise into barrel. Pour directly into sample cups

To use as transfer tube: follow

above procedure until sample is contained in barrel. Remove barrel with filtered sample intact. Tube can be centrifuged, as double valve prevents specimen loss.

Also valuable for separating immiscible layers and removing particulate matter (resin beads, paper fiber) from reaction tubes.

Tube fits standard blood collection tubes with 16mm and 13mm dia. Available in 4 lengths.

Oxford® Titrator

For Fluorescent or Visible Color Titrations

15-182-700

Performs titrations with samples as small as 0.05ml. Complements automatic chemistry systems when night work, stats, and short runs do not justify setting up more complicated instruments.

Place sample in titration cup on turntable. Lower titrant reservoir so that delivery tip is below surface of solution but not touching bottom of cup. Rotate titrant pump dial slowly in clockwise direction from 0 to 100 units in 0.1 subdivisions until the titration endpoint is reached. While adding titrant to sample, stir solution by switching on cam-operated turntable to produce 3-way agitation when tip is in solution.

Ordering Information: Compact tabletop instrument with graduated pump dial and built-in scale vernier. Built-in visible and UV light with UV shield. Disposable pipets and cups eliminate cleaning. With 200 titration cups, 50 μ l sampler, 500 disposable cups, instrument dust cover, instructions, and manual. 10Lx21Wx23cmH. Shipping wt 6.3kg (14 lb). 115V 60Hz.

Fisher Diagnostics UV Enzyme Kits

All Fisher enzymes incorporate these outstanding features:

Unsurpassed quality. Kits manufactured from the finest raw materials. Use-tested to assure accuracy and reproducibility lot after lot. Stat and weekend results will correlate well with normal workday procedures.

Manufactured in compliance with FDA guide lines relative to *in vitro* diagnostics. Documentation fully delineating reagent sensitivity, precision, specificity, merits, and limitations has been prepared in accordance with government requirements.

On every label: registered NDC number, lot number, and expiration date. Samples from every lot are retained and periodically checked to assure product performance and stability.

Space-saving packaging. Neat modular design lets you utilize maximum refrigerator space. Vials are packed to conserve every possible inch

Multi-packaging for small and large volume labs. There's a special package size that's ideal for stats, profiles, series, semi-automated or automated enzyme measurements. Large-volume labs needn't mix 3 or 4 different batches. Small volume labs have no waste.

Convenience packaging. Each time you remove a vial, check off one of the inventory control dots on the package side. A glance at the box tells when it's time to reorder. Also you'll find areas for dates received, dates opened and initials (requirements of CAP Chemistry Checklist).

Quick and easy to use. Reagents are premeasured, premixed, and lyophilized in one vial. No buffers or auxiliary reagent required. Just add distilled water. What's more, our choice of accepted lab methods offers the ultimate combination of test efficiency and assaying ease

CPK Test Kit

Method: Oliver and Rosalki. Based on kinetic UV reaction. Uses 0.1ml serum. No working solution or auxiliary reagents needed. All reagents premixed in single vial. Co-enzyme is NAD to provide more stable reaction than NADP. Linearity and accuracy are 3 to 5 times normal. No serum dilutions needed.

Size	Cat. No.	Pk
20x2.9ml	CS-750	29.00
20x15	CS-751	114.00
6x75	CS-752	148.50

CPK Quick

Method: Oliver and Rosalki. Special formulation cuts reaction time to 2-3 minutes. Just a 2-minute lag time. Uses 0.1ml serum.

Size	Cat. No.	Pk
20x3ml	CS-760	39.00
20x16	CS-761	156.80
6x80	CS-762	182.00

GPT Modified Test Kit

Method: Henry. Based on kinetic UV reaction. Uses 0.2ml serum. No serum dilutions necessary for pathological serum levels. No blank required. Substrate saturation eliminates inhibition during initial phase, increases linear reaction time.

Size	Cat. No.	Pk
20x3ml	CS-790	11.20
20x16	CS-791	54.00
6x80	CS-792	54.00

Triglycerides Test Kit

Method: Pinter, Garland, and Randle. Uses 0.5ml serum. 5-min room temperature incubation; 5-min reaction. Procedure requires only 3 pipetings, hence less chance of missing reagent or cross contaminating. Interference of phospholipids reduced via rapid saponification. Uses glycerokinase (GK), most widely accepted method of reference.

Size	Cat. No.	Pk
4x33ml (50 detm)	CS-875	49.50

 α -HBDH Test Kit

Method: Rosalki and Wilkinson. Based on kinetic UV reaction. Uses 0.1ml serum. Just 60 sec incubation. More specific for myocardial infarction than either LDH or GOT alone. Assay complete in 2 to 3 min.

Size	Cat. No.	Pk
20x3ml	CS-810	21.00
20x16	CS-811	89.60
6x80	CS-812	96.00

LDH-P Test Kit

Method: Henry. Based on kinetic UV reaction. Uses 0.05ml serum. Higher substrate concentration means fewer repeats of elevated samples. No incubation.

Size	Cat. No.	Pk
20x3ml	CS-840	25.20
20x16	CS-841	80.00
6x80	CS-842	86.40

 γ -GT Test Kit

Method: modified Szasz. Based on kinetic reaction at 405nm. Uses 0.1ml serum. Dry-fill technique cuts dissolving time. Glutamate at exact concentration . . . no adverse effect from free glutamate in serum. Low reconstitution temperature improves stability, sensitivity, and linearity.

Size	Cat. No.	Pk
20x3ml	CS-800	21.00
20x16	CS-801	89.60

LDH-L Test Kit

Method: Wacker. Based on kinetic UV reaction. Uses 0.1ml serum. Higher substrate concentration means fewer repeats of elevated samples. Activity remains linear for full half hour. No incubation.

Size	Cat. No.	Pk
20x3ml	CS-830	25.20
20x16	CS-831	80.00
6x80	CS-832	86.40

Enzytec Control Serums

Verify instrument and reagent performance. Human based — reacts exactly as routine serum specimen. Available in normal and abnormal ranges: Enzytec Normal contains key diagnostic enzymes in concentrations within normal adult ranges. Enzytec Abnormal contains key diagnostic enzymes in concentrations above normal adult ranges. Values established for: Fisher Diagnostics CPK, GOT, GPT, γ -GT, α -HBDH, LDH, and total and true triglycerides.

Size	Cat. No.	Pk
Enzytec Normal 20x3ml	CS-912	45.00
Enzytec Abnormal 20x3ml	CS-914	45.00

GOT Test Kit

Method: Henry, Amador, and Wacker. Based on kinetic UV reaction. Uses 0.2ml serum. Increased linear reaction time enables completion of batch testing. Thanks to modified reaction, LDH removes serum pyruvate 1 minute after serum addition. Assay complete within 3 min manually, 1 assay per minute in series. Serum pre-incubation not necessary.

Size	Cat. No.	Pk
20x2.8ml	CS-780	11.20
20x15	CS-781	54.00
6x75	CS-782	54.00

Iso-Computron Nuclear Counting Systems

For all *in vitro* nuclear procedures

Fully automatic calibration and background subtract

General Medical System's Iso-Computron Models 1200 and 1500 detect, analyze, and count samples emitting gamma radiation.

They're single channel analyzers with the latest in integrated circuits and silicon solid-state components. Consists of scintillation detector, amplifier, analyzer, electronic timer, high-speed scaler, and ultrastable high-voltage power supply.

Built-in digital processor handles all data computations. Displays information in 5 digits.

Completely compatible with all *in vitro* nuclear procedures. Those that require AEC isotope license such as blood volume, plasma volume, red cell survival studies, Schilling test, and fat cell absorption, etc. Also, those that are license-exempt and come under the general license — T_3 , T_4 thyroid function and latent iron binding capacity tests, radioimmunoassays. Allows operator to compute free thyroxine index and thyroxine iodine values, too.

Iso-Computron is exceptionally easy to use, thanks to these features:

Automatic Background Subtract

Compensates for radiation that doesn't come from sample. Compensation is independent of counting time.

Automatic Calibration

Press button that corresponds with isotope used. Instrument locks on isotope's energy peak.

Four Operating Modes

1. Percent uptake — For comparing patient sample against standard or itself.
2. Ratio — For comparing patient sample against control serum.
3. Preset time — For counting, displaying radiation for specific time, from 0.1 to 9999.9 sec.
4. Preset count — For counting nuclear disintegrations (from 1 to 99,999) and displaying elapsed time.

Easy Maintenance

To isolate and identify malfunctioning circuit board, simply press "BITS" button and follow easy directions to identify faulty board. Just replace with circuit board from Accessory Kit.

Iso-Computron 1200 and 1500 are basically the same, except for their detector and sample well.

Model 1200: Internal sample well detector holds 7.5ml samples.

Model 1500: External detector has canister for large volume sample holder, e.g. in fecal fat procedures. Accommodates up to 11cm dia container. *Ordering Information on next page.*

Special Warranty with Accessory Circuit Board Kit

Purchasing this kit of circuit boards at the same time you buy an Iso-Computron extends the instrument's warranty period as follows:

Warranty on electronics extended from one to three years.

Warranty on scintillation detector extended one to two years.

Kit contains: counter/timer, decade board, logic board, multiply/divide board, low voltage power supply board, amplifier/analyzer board, detector high-voltage power supply board, decoder/driver display board.

Fisher Scintanalyzed™ Reagents for Liquid Scintillation Counting

ScintiVerse™ and ScintiLene™

Ready-To-Use

Precise blending insures homogeneity, batch-to-batch uniformity. Superior reproducibility for all types of samples. Each chemical component rigorously purified to insure maximum counting efficiency.

Easy. Convenient. Just add radioactive sample to cocktail. Shake. And count.

ScintiVerse™ Universal Cocktail

Handles all types of samples. Superior results with aqueous solutions, non-aqueous organic soluble materials, and emulsions. Ideal for water, acids, buffers, bases, and salts. Also for use with soluble biological material such as amino acids, serum albumin, tissue digests, plasma, urine, sucrose, and cesium density gradients, acrylamide gels, TLC fractions.

The answer to many difficult-to-count samples. Provides increased efficiency with ^3H and ^{14}C in high volumes of water.

Increasing water content causes ScintiVerse™ solution to change from a clear liquid to stiff gel or emulsion. Ideal for suspension of solid particles.

Contains all necessary fluors and solvents. In 1 gal (3.8 liter) jugs.

So-X-1Ea/41.00
Case of 4/124.80

ScintiLene™ Xylene-Base Cocktail

Primarily for non-aqueous samples: alkaloids, lyophobic samples, steroids, fats, oils, non-polar solvents, and heterocyclics. Compatible with tissue and gel solubilizers. Stable to quaternary ammonium bases

Produces results in higher efficiencies than toluene- or dioxane-base cocktails. Safer. High characteristic flash point. No hazardous vapors. No pungent odors. In 1 gal (3.8 liter) jugs.

So-X-2Ea/21.00
Case of 4/60.80

ScintiPrep™

Concentrated Scintillator/Solvent Mixtures

Just dilute with toluene or xylene and use. Final concentration easily regulated to accommodate wide variety of LSC chemistry systems.

ScintiPrep 1

PPO/Dimethyl-POPOP; a 25X concentration in xylene. 125g/liter PPO and 2.5g/liter Dimethyl-POPOP. A 24:1 ratio of toluene or xylene to ScintiPrep™ 1 provides solution of 5g/liter PPO and 0.1g/liter Dimethyl-POPOP. In 1 qt (946ml) bottle.

So-X-6Ea/45.00
Case of 6/215.10

ScintiPrep 2

PPO/POPOP; a 25X concentration in xylene. 100g/liter PPO and 1.25g/liter POPOP. A 24:1 reconstitution ratio of toluene or xylene to ScintiPrep 2 provides solution of 4g/liter PPO and 0.05g/liter POPOP. In 1 qt (946ml) bottle.

So-X-7Ea/45.00
Case of 6/215.10

ScintiPrep 3

PPO/Bis-MSB; a 25X concentration in xylene. 100g/liter PPO and 2.5g/liter Bis-MSB. A 24:1 reconstitution ratio of toluene or xylene to ScintiPrep 3 provides solution of 4g/liter PPO and 0.1g/liter Bis-MSB. In 1 qt (946ml) bottle.

So-X-8Ea/45.00
Case of 6/215.10

ScintiPrep 4

PPO concentrate; 250g/liter PPO in xylene. A 49:1 reconstitution ratio of toluene or xylene to ScintiPrep 4 provides solution of 5g/liter PPO. In 1 qt (946ml) bottle.

So-X-9Ea/74.00
Case of 6/345.60

Primary Scintillators

Soluble, Stable, Economical

PPO

2,5-diphenyloxazole. Most widely used all-purpose primary scintillator. Ideal for homogeneous and heterogeneous systems, emulsions, gels. Readily soluble in all commonly used organic, polar, non-polar solvents. Also suitable for tissue solubilizers (soluble in quaternary ammonium salts).

D-144	25g/10.00
	Case of 6/60.00
	100g/30.00
	Case of 6/180.00

Butyl-PBD

2- (4-biphenyl)-5-(p-tert-butyl-phenyl)-1,3,4-oxadiazole. More efficient than PPO in most solvents, even at low temperature. Also more stable, especially to photochemical degradation. Highly efficient. Excellent fluorescent properties. Greater resistance to color and chemical quenching.

B-397	25g/19.05

Consistently Efficient Results

Bis-MSB

p-Bis (o-methylstyryl) benzene. High quantum efficiency. More soluble in organic solvents, especially toluene, than POPOP or Dimethyl-POPOP. Permits increased working concentrations if quenching becomes a problem. Generally used in a 1:49 Bis-MSB:PPO combination.

M-305	25g/30.00
	100g/106.00

POPOP

1,4-Bis [2-(5-phenyloxazolyl)]-benzene. Traditionally used in combination with PPO. One of the most efficient secondary scintillators. Effectiveness limited only by its low solubility.

D-145	5g/10.12
	Case of 6/60.72
	25g/47.30
	Case of 6/283.80

Dimethyl-POPOP

1,4-Bis[2(4-methyl-s-phenyloxazolyl)]-benzene. Used in combination with PPO. Efficiency similar to POPOP but solubility characteristics permit higher concentrations.

D-146	5g/10.25
	25g/47.00

ScintiGest™ Tissue Solubilizer

Ready to use 0.6N solution specifically formulated for use with toluene- and xylene-based scintillation counting solutions.

Accepts large aqueous samples and solubilizes most types of whole animal and plant tissue. Tissue homogenates with low quenching and high efficiency at ambient or refrigerated temperatures. No problems with phase separations. In 100ml bottles.

So-X-10	Ea/15.00
	Case of 6/62.40

Special Scintanalyzed™ Solvents

Ascorbic Acid Crystals Minimize Chemiluminescence

Anti-oxidant used to counteract effects of chemiluminescence (chemical reaction producing light within counting vial), a problem when emulsion counting mixtures are used at alkaline pH's.

A-61	1 oz (28g)/3.40
	Case of 6/17.10
	5 oz (142g)/11.50
	Case of 6/57.60

Naphthalene Restores Fluorescence

Secondary solvent acts somewhat as a scintillator. Restores fluorescence lost due to addition of water to dioxane/PPO mixture. Improves energy transfer particularly in dioxane, toluene mixed with alcohols, and toluene mixed with alkoxyethanols. Compatible with all primary and secondary fluors. Recommended concentrations vary from 20 to 100g/liter. In 1 lb (454g) bottle.

N-136	Ea/7.20
	Case of 6/36.00

Phenethylamine Absorbs Radioactive CO₂

Used with any liquid scintillant mixture to absorb radioactive CO₂ produced by combustion or digestion.

Water white (APHA less than 5). Produces consistently higher counting efficiency than other commonly used absorbants. Use right from the bottle. No further purification necessary.

Bottled in 270ml quantities, enough to formulate 1 liter of scintillation solvent mixture. No leftover waste. No chance of contamination. Recommended formulation: 270ml phenethylamine, 270ml methanol, and 460ml toluene plus primary and secondary fluors. 270ml in bottle.

P-404	Ea/12.35
	Case of 6/67.50

X-16

Scintanalyzed™ Solvents Assure Low Background, Minimum Quenching

Each lot use-tested for low background count, low quenching. Lot-analyzed to determine chemical purity and spectral characteristics. Absorbance in 350nm to 450nm range must be less than 0.01 absorbance unit. Pertinent information printed directly on labels.

All are packaged under inert atmosphere of nitrogen. Ready to use from the bottle.

Scintanalyzed Solvent	Cat. No.	Quart (946ml)	Case of 6	Gal (3.8 liters)	Case of 4
Dioxane	D-116	15.00	65.10	47.60	152.00
Toluene	T-313	6.20	21.00	12.20	34.00
Xylene	X-16	6.20	21.00	13.00	36.56

Decontaminating
Spray and Cleaner

Rad Con™ aerosol spray removes radioactive particles from counting instrument housing . . . detectors . . . sample changing mechanisms . . . work areas where radioactive compounds are used or stored.

It lifts radioactive particles from contaminated surface . . . traps them in aerosol foam. Less danger of contamination reaching hands or clothes. Easily wiped up and discarded. Leaves no residue.

Monitor and repeat if necessary. For rough surfaces allow foam to stand for few seconds before wiping off.

Non-corrosive to glass, plastic, metal, and painted surfaces. No mixing or dilution required. 510g size.

3-337-30Ea/6.75
Case of 6/35.10

Rad Con™ Hand Cleaner

Removes radioactive contaminants from skin areas without using harsh abrasives or detergents. Its aerosol foaming action actually lifts contaminants from pores and holds them in suspension until rinsed away

Just apply, rub, rinse, and wipe clean. Only one application needed to reduce surface count rate to near background levels

Frequent use doesn't irritate skin. Avoid contact with eyes. 510g size

3-337-33Ea 8.25
Case of 5/42.10

3-337-11

Linear Polyethylene
Scintillation Vials

FISHERbrand®. 20ml capacity with 27mm dia screw cap. Resist swelling due to solvent degradation. Absolutely leakproof. Without collars, ridges, seams. Low background count. Excellent light transmission.

Economy Pak consists of 500 loose vials with 500 loose caps in separate bag. Premium Pak consists of 5 vacuum-molded styrene trays with 100 vials with cap screwed on in each tray.

Pak	Cat. No.	Case of 500
Economy	3-337-11	32.00
Premium	3-337-12	37.50

3-337-16

Low Potassium
Glass Vials

FISHERbrand. 20ml capacity. Designed to fit all common counters on the market. Crystal-clear walls. High ultraviolet light transmission.

With cone-shaped plastic liner in white plastic screw-cap. 100 vials to tray with caps packed separately. 5 trays per case.

3-337-16.....Case of 500/70.63

With cork-backed tin foil liner in white plastic screw-cap. 100 vials to tray with caps packed separately. 5 trays per case.

3-337-15.....Case of 500/70.63

Vial Holder

Holds 24 scintillation vials. Polypropylene support with hand grips.
30Lx13Wx9.5cmH.

Case of 4 25.20

3-337-9

Kimble Glass Scintillation Vials

Optimum background characteristics for low activity counting. 20ml capacity. Outside diameter of 28mm. Vials in trays with plastic seals. Caps packed separately in plastic bags of 100.

With cork-backed foil liner in white plastic screw-cap.

3-337-9Case of 500/77.69 (Kimble 74510)

With cone-shaped plastic liner in white plastic screw-cap.

3-337-7Case of 500/82.50 (Kimble 74515)

Replacement caps. For 3-337-7 vials. White plastic screw-caps with cone-shaped plastic liners.

3-337-8Case of 1000/43.04 (Kimble 74525)

Spinbar Box

Assortment of 16 most popular Spinbar magnetic stirring bars in convenient hinged-top clear plastic box.

14-511-5939.50

3-337-20

7ml MiniVial® Polypropylene Scintillation Vials

Reduce costs of reagents by 50% or more. Use same volume of radioactive sample as with 20ml vials . . . but 1/3 to 1/2 less scintillator (only 5ml). Also cost less than conventional vials.

Lower background and high efficiency. Compatible with any conventional scintillation counter using 3-337-21 vial holder. Packed 200 vials per tray with screw-caps in separate compartment in tray. 5 trays per case.

3-337-20Case of 1000/75.00

Vial Holder for 3-337-20 Vials

Makes MiniVials compatible for use with any conventional liquid scintillation counter. Holder with vial inside has same configuration as standard 20ml vial.

3-337-21Pk of 100/39.90

3-337-19

Automatic Scintillation Vial Filler

Fills 100 vials per minute

Multi-Jet 100 Automatic Scintillation Vial Filler makes filling scintillation vials with counting fluid a fast, simple operation. You needn't remove vials from their packing tray.

With just one back-and-forth motion of actuating lever . . . cocktail is dispensed into a full row of 10 vials. Advance vial-holding drawer . . . next row of vials is in place for filling. Entire tray of 100 scintilla-

tion vials takes less than one minute. Individual vials need not be handled.

Dispensing range: 1 to 10ml, with reproducibility better than 1%. Utilizes interchangeable glass syringe metering pumps.

Highly solvent-resistant construction. Handles all manufacturers' 100-vial trays.

3-337-19A.....711.00

Corning Model 175

Automatic pH/Blood Gas Analyzer

With Computerized Convenience

Model 175 is always calibrated, always ready. Runs stat blood gases anywhere in the hospital . . . 24 hours a day. Handles 20 to 22 samples per hour — hour after hour.

Choice of sample size. Accepts samples from syringes, vacuum collection tubes, or microcapillary tubes as small as 125 μ l. Instant message panel indicates when system is ready for new sample; when sample is properly in place; and when to remove sampling device.

Uses Corning's proven single-sample measuring system in which all three measuring electrodes (pH, PO₂, PCO₂) measure the same sample. Sample is held in solid-state electronically thermostated cuvet at 37°C \pm 0.1°C. After each sample is completed, chamber is automatically washed and prepared for next sample.

Automatic endpoint detection. Detects endpoint for each measuring electrode — pH, PO₂, PCO₂. Computer program actually detects individual electrode response endpoints. Only after the three endpoints are reached does Model 175 display the four calculated parameters — HCO₃⁻, base excess, O₂ content, O₂ saturation.

If no endpoint is detected within three minutes, a NO ENDPOINT indicator lights for that parameter and calculated values based on that parameter are not reported. Operator may override the NO ENDPOINT indicator by pushing the button if he believes value is acceptable. When calculated values based on the parameter are displayed, a red light reminds operator that he has chosen to accept values which the computer has questioned.

Self-diagnosis. Model 175's computer is constantly monitoring instrument performance. A series of panel indicators immediately informs operator of a malfunction. Operator can use another panel of diagnostic controls to actually diagnose problem areas. Means minimum downtime and confidence in reported values.

Adaptable to patient and laboratory needs. Dial in patient temperature and hemoglobin, and system automatically displays corrected values. If using calibrating gases other than those recommended by Corning, just dial in values. System calibrates using the entered values. If laboratory normally corrects for PO₂ gas/liquid correction factor, it may also be dialed in for automatic calculation into displayed values.

Automatic calibration. Using self-contained buffers and calibrating gases, Model 175 automatically performs a one-point calibration every half hour (2 min) and a two-point calibration every two hours (3 min). Thus, system is always ready, day or night.

Ordering Information: Model 175 comes complete with accessory kit including all electrodes, reagents, and supplies needed for initial start-up (excluding calibration gases and regulator). Also automatic patient temperature corrector, hemoglobin barometer, and ticket printer. Instrument will be unpacked and installed by authorized service representative. For 110/230V 50/60Hz.

Corning Model 165-2 pH/Gas Analyzer Gives 6 Blood Functions

Values displayed on 5-digit readout

Advanced system for rapid, accurate determination of critical blood functions. Electrodes determine blood pH, PCO₂, and PO₂ directly. Built-in computer uses data to calculate anaerobic plasma bicarbonate and total CO₂ by modified Henderson-Hasselbalch equation. Operator then "dials in" patient's hemoglobin value (determined with Fisher Hemophotometer®, page 589, or other instrument), and computer calculates base excess. Values of all six functions are displayed on 5-digit readout.

Sensing and reference electrodes are in temperature-controlled cuvet (±0.01°C). This eliminates need to split sample or use duplicate samples. Blood may be injected with syringe or aspirated from Vacutainer® or capillary. Interior of cuvet has non-thrombogenic coating to delay clotting, make cleaning easier.

Calibration gases pass through heated humidifiers. Controlled by pushbutton valves that shut off automatically if left on too long.

Calibration buffers are injected same way as blood samples.

Standby circuitry monitors electrode response, actuates signal light if membrane becomes defective. Electrodes have easily replaced preformed cap-type sensing membranes and spacers.

Ordering Information: Comes with electrodes; 1 pt (473ml) filling solution for each electrode; 1 pt (473ml) each blood buffers, pH 7.382 and 6.838; pk/12 reference electrode membranes; 4 oz (118ml) flush solution concentrate; 1 pt (473ml) blood pH electrode cleaning solution; sampling kits; lamps, fuses, adapters, tweezers, and instructions, for 105-135V 50/60Hz.

Calibrating gases supplied in 13-640-955 accessory kit and available separately (page 577).

13-640-980

Corning Model 161 pH/Blood Gas System for \$4600

Exceptionally reliable, low-cost two-part system measures pH, PO₂, PCO₂. Readout module has 5-digit display panel. Separate calibration controls and pushbutton selection for all 3 functions. Indicator lights identify function on readout.

Analytical module houses CO₂ and O₂ electrodes in common sample chamber. Reference and pH electrodes (connected to analytical module) are suspended in sealed KCl container to prevent KCl creepage. Maintenance-free reference electrode junction eliminates messy KCl reference bridges, too.

No need for water baths and preheaters. Electrodes are electronically heated to maintain sample temperature ... iced samples reach test temperature in less than 90 sec.

Pre-cut, pre-fitted gas sensing membranes fit over ends of electrodes. Easy to change. Assures optimum response and stability.

Blood samples are injected with syringe or aspirated from Vacutainer® or capillary. Sample size: 75 μ l for pH function and 125 μ l for PO₂ and PCO₂.

Fast, simple simultaneous calibration of PCO₂ and PO₂ using 2 gas mixtures containing known percentages of carbon dioxide and oxygen. Gases are humidified before entering analytical chamber ... prevents membrane from drying out. Standard buffers also serve as pH calibration standards. Readout set to match known gas pressure and pH value.

Aspiration system flushes and dries sample chamber and gas electrodes after each determination ... prevents cross-contamination. System vents sample and moves waste into plastic bottle. Gravity trip prevents bottle from overflowing.

Ordering Information: Attractive orange baked-enamel finished units. Analog and BCD output. With 13-640-988 accessory kit which includes pH, PO₂, PCO₂ electrodes and sufficient supplies for immediate startup. Without calibrating gases and regulators. 115V 50/60Hz.

Blood Gas Standards in Reusable FISHERbrand® Cylinders

Save 40 to 50% over disposable cylinders yet have high quality blood gas standards.

Plan works like this: Estimate your yearly usage of these gases (minimum of 4 cylinders required for smooth operation). To start, we'll ship you a 60-day supply of filled cylinders. As cylinders become empty, return them . . . continue using remaining supply. Meanwhile, we quickly refill and return cylinders to you.

Plan provides automatic 3 to 4 week inventory. Cylinders shipped in prelabeled mailing cartons for easy return shipping via insured parcel post. Price includes all charges for shipping cylinders to you.

Precision standards are pre-adjusted and certified for calibrating all direct-reading PCO₂ and PO₂ electrodes.

For time-saving convenience, each cylinder label has direct mmHg readout chart, referenced to barometric pressure. You needn't make daily calculations for calibration values.

Each standard is triple-analyzed with gas values accurate to 0.03%. Hence, by formula conversion, direct readout chart is accurate to 0.2mmHg.

Refillable cylinders are medical "E" type with non-indexed medical post valves. No adapters required for standard blood gas installations.

Primary Blood Gas Standard for IL, Corning Systems

Normal range for direct-reading electrodes. Certified preconversion values: 5% CO₂, 12% O₂, and balance N₂.

Primary Standard. 0.57m³ at 123kg/cm².
10-031-11Case of 2/80.00

Secondary Blood Gas Standards for IL, Corning Systems

Slope values for direct-reading PCO₂ and PO₂ electrodes. Certified preconversion values are: 10% CO₂, 0% O₂, balance N₂.

Secondary Standard. 0.57m³ at 123kg/cm².
10-031-21Case of 2/60.00

Blood Gas Standards for Radiometer Blood Gas Systems

Certified nominal values: 5% CO₂, 0% O₂, balance N₂.

Gas Standard. 0.57m³ at 123kg/cm².
10-031-31Ea/20.00
Case of 2/40.00

Certified nominal values: 2.8% CO₂, 0% O₂, balance N₂.

Gas Standard. 0.57m³ at 123kg/cm².
10-031-36Ea/20.00
Case of 2/40.00

Precision Gas Regulator for Calibrating Blood Gas Systems

This gas regulator is designed for closely controlled low flow rates to direct-reading PCO₂ and PO₂ electrodes — a necessity when calibrating delicate blood gas systems. Used with "E" cylinders.

Built-in humidified bubble counter lets you see exactly when flow is one bubble per second. Safety flow restrictor needle valve positively controls gas and prevents accidental membrane rupture from excessively high flow.

Has yoke-type non-indexed valve. Chrome-plated. With transfer tubing and cylinder handwheel.

10-031-25Ea/110.00
Case of 2 220.00

Corning Calibration Gases

For Blood Gas/pH Meters

Calibration gases are supplied in disposable cylinders that hold 560 liters at 154kg/cm². Composition is guaranteed to $\pm 0.01\%$ of minor

component, tanks are not reused. Gases are assortable to obtain Corning quantity discounts.

For Corning Model 161. Balance of gas is nitrogen.

Model 165, Blood Gas/pH Meter calibrated by adjusting circuits to give correct partial pressure readings with gas mixtures containing known percentages of carbon dioxide and oxygen.

Van Slyke Apparatus Determines CO₂, CO, and O₂ in Blood

Van Slyke blood gas apparatus determines carbon dioxide in 1.0ml blood or plasma sample as measure of alkaline reserve . . . to within 1 vol%. Determines oxygen capacity in 2ml sample as measure of hemoglobin . . . to within 0.25 vol%. And determines carbon monoxide in 1ml sample as evidence of poisoning . . . to within 0.25 vol%. Hardwood support apparatus is finished in white enamel. Provides background that sharply defines mercury meniscus in buret. Dovetail clamp firmly fastens board to aluminum support rod with white porcelain base, yet enables technician to remove board quickly, easily, to shake contents of buret. Two pen rings support leveling bulb.

Ordering Information

Original Van Slyke Apparatus. With 50ml buret, calibrated to specifications of Van Slyke, and two 3-way stopcocks.
10-790-15113.50

With Shohl Trap. Van Slyke apparatus has Shohl trap at bottom of buret. Prevents air from entering buret and contaminating sample. Stopcock provided on trap to remove air that might diffuse through rubber tubing.

Microgasometer Measures Gas From Minute Samples

CO₂, CO, O₂, and N₂ in blood, plasma, other fluids

Natelson Microgasometer is completely self-contained, adapts classical Van Slyke method to ultramicro analysis. Results accurate to within 1% on 0.03ml samples.

Motorized model greatly simplifies manipulation and rinsing. Motor-driven piston controls mercury columns; time-controlled magnetic stirrer avoids variations of hand-shaking. Especially suitable for routine clinical analyses.

Operation: sample, reagent, and water introduced and driven, under vacuum, into mixing bulbs. Pressure of liberated gases measured on manometer by motorized apparatus that moves piston in mercury-filled reservoir. Gas-absorbing reagent introduced; pressure of remaining gas measured with manometer.

mixing chambers, pipet, and manometer. With glassware, motor, magnetic stirrer, timer, 8 vials in anodized aluminum rack; stopcock grease; lubricant; 10-800-121 low-foam detergent and 10-800-122 anti-foam detergent. For 115V 50Hz.

10-800-125962.50

Manual model: Same as 10-800-125 but with hand wheel for moving piston in mercury reservoir instead of motor-driven piston. Without magnetic stirrer.

10-800-100522.50

Microgasometer Detergents

Low-foam detergent. Blend of non-ionic polyols combining anti-foam and detergent properties. 125ml bottle.

10-800-1214.35

Anti-foam. Used with low-foam detergent. A non-toxic polyol. 125ml.

10-800-1224.35

Ordering Information: Portable, lightweight, compact. Sturdy cast-iron base and corrosion-resistant aluminum upright for reservoir,

10-800-125

Warburg Manometers and Supports

FISHERbrand® Warburg Single Stem Manometer. More easily read, less likely to break than conventional Warburg manometers. Siamese-type twin capillaries; graduated 0-30cm in mm. 3-way ground-glass stopcock. Inner joint is $\frac{3}{16}$ 17/20 borosilicate glass. Without tubing, reaction vessel or springs.

10-807-332.00

FISHERbrand® Warburg Manometer. 2 arms, both grad 0-30cm in mm. 3-way stopcock. Borosilicate glass. Side arm slightly below stopcock. Has $\frac{3}{16}$ 17/20 inner joint. Without tubing, reaction vessel, or springs.

10-810A39.50

Warburg Manometer Support. For mounting a 10-807-3 or 10-810A manometer on Warburg apparatus. Stainless steel with dull white reflector for easy reading. With clamps for holding support on apparatus.

10-807-230.50

Manometer Metal Stand. Holds ten 10-807-2 Warburg manometer supports. Without supports.

Guaiac-Matic System Detects Occult Blood

Guaiac-Matic System consists of one 2 oz (60ml) dropper bottle of guaiac solution and 500 Guaiac-Matic disposable containers. In only 30 seconds, you can determine if specimen is positive or negative.

Place specimen (feces, sputum, urine, or other body fluid) on filter paper inside container. Add 3 drops of guaiac solution, 2 drops of concentrated glacial acetic acid, and 2 drops of 3% hydrogen peroxide. If green or blue color appears, occult blood is present. If there's no color change, test results are negative.

When test is completed, place tight-fitting cover on container for disposal. Eliminates transferring specimen and chance of spillage. With 500 lids.

8-788Case/54.16

Guaiac Solution. 2 oz (59ml) bottle. For 500 tests.

FibroSystem® — Total System for Coagulation Testing:

Fibrometer®, precision electronic
clot-sensor/timer . . .

Thermal Prep Block, precision heating unit . . .

Automatic Pipet and other valuable
accessories . . .

Reagents, stable, sensitive, and accurate . . .

Fibrometer® Coagulation Timer

Measures prothrombin time to ± 0.1 sec

Determines coagulation properties of plasma or serum for diagnostic use and anticoagulant therapy control. Fibrometer® runs every test under identical conditions; measures each prothrombin time with same high degree of reproducibility, and with ± 0.1 sec accuracy. Shows prothrombin time on digital readout.

Fibrometer automatically:

1. maintains plasma and reagent temperature at $37.2^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$,
2. identically agitates all samples,
3. starts time count when plasma and reagents are mixed,
4. judges endpoint at same stage

of fibrin thread development for all samples.

Fibrometer, a thermostated heating block controlled by dual thermostat, has 7 shallow heated wells to hold coagulation cups (see Accessories). One well is used for test; remaining 6 for bringing reagent to test temperature, $37.2^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$. (Adjacent water bath or heating block such as 2-658-120 required to bring plasma to temperature.)

When reagent cup comes to temperature, it is put into well at center of block. Plasma is blown into reagent, and timer bar is

(Contd. on next page.)

pressed. Arm with fixed and movable probes automatically swings into position, immersing probes in reagent-plasma mixture. Movable probe cycles in 2 planes through mixture, twice each second in a synchronized cycle. When fibrin thread appears in forming clot, probe and timer stop. Readout to ± 0.1 sec. To reuse, wipe probes with tissue; push reset button to clear instrument.

Prothrombin reagents used must be able to form elastic clots with plasma. Granular clots don't have enough fibrin threads to be "felt" by probes.

Digital readout system, connected with synchronous motor. No gears or wheels to turn in reset-

ting. Probe alignment not critical. Bimetallic unit brings Fibrometer® to temperature rapidly, where it's held by fine mercury unit. Neon pilot light signals when Fibrometer reaches operating temperature.

Ordering Information: Transistorized circuits account for Fibrometer compactness, moderate cost, and trouble-free operation. Electrical outlet on side of case for attaching water baths or other auxiliary equipment. Chrome finish. 115V 60Hz. With 400 FibroTube® cups (2-658-105), 0.3ml probe, power cord, and instruction manual.

2-658-100780.00
(BBL 60415)

Thermal Prep Block

Incubates reagents and test specimens

Precision heating unit offers max efficiency in incubating reagents and test specimens at constant 37.2°C. With 20 shallow warming wells for coagulation cups, and 10 deep warming wells for 12x75mm tubes. Uses two removable plastic trays for easy pipetting, transfer, storage of cups.

Ordering Information: Solid-state circuitry maintains temperature to within $\pm 0.5^\circ\text{C}$. Warm-up time for refrigerated reagents averages 5 min. Plugs into either side of Fibrometer. With 2 trays.

2-658-120395.00
(BBL 60419)

2-658-112

Automatic Pipets

Dispense reagents quickly, accurately

Electric. Automatically dispenses 0.1ml or 0.2ml of plasma, serum, or reagent. Automatically starts Fibrometer when contents are ejected into timing coagulation cup.

With 85cmL cord with pin-jack connector, 200 FibroTip™ disposable plastic tips, instructions.

2-658-110107.59
(BBL 60420)

Plunger-operated. Hand-held precision pipet dispenses 0.1ml or 0.2ml with volumetric accuracy of

$\pm 3\%$ using water at 20° to 25°C. Standard deviation (reproducibility): $\pm 1\%$. Adapter supplied permits pipetting of 0.01, 0.02, 0.025, and 0.05ml. Similar in appearance to 2-658-110, but without cord and connector.

Used in hematology, urology, chemistry labs, for pipetting reagents and specimens in variety of tests. Without plastic tips.

2-667

3-Piece Prothrombin System

Saves space and reagents

Complete Ames Sera-Tek® System includes Temp-Control incubator block, disposable reaction chamber, contrast lamp.

0.1ml reagent is added to reservoir on one end of reaction chamber; 0.05ml plasma to other end. Chamber is removed from incubator block, then tilted to begin reaction (timed with stopwatch), and rotated under contrast lamp until clot forms. Clots suspended in chamber capillary are visible immediately. End points are sharp.

Compact incubator block maintains 37°C, provides reproducible incubation for prothrombin time determinations. Holds 20 reaction chambers. 23Lx10Wx7cmH. 115VAC.

Prothrombin reaction chambers with internal capillary space divided in center by rise in chamber floor. 500 disposable chambers per pk.

Black background, overhead light of Sera-Tek contrast lamp make web of clot formation clearly visible, help produce consistent readings from test to test. Lamp also useful for readings of Coombs cross match, blood grouping and typing, other serological procedures where agglutination or hemolysis must be determined. 31Wx23Lx26cmH. 115V 60Hz.

Reagents and Supplies For Coulter Counter® Systems

Hematall® Isotonic Diluents

For electronic counting of red and white blood cells. Also for accurate hemoglobin, MCV, hematocrit, MCH, and MCHC. Will not alter initial volume of cells. Maintains accurate cell size for at least 30 minutes. For Coulter Models A, B, D, F, FN, and S. In PolyPac™ container.

With sodium azide
CS-605-5.....5 gal (19 liter)/15.00

Without sodium azide
CS-606-5.....5 gal (19 liter)/17.00

Hematall LAS Reagent

High speed lysing. Specially prepared for use with Hematall Isotonic Diluent. Compute white blood cells without bothersome contamination from red cell debris. WBC count is stable for over 30 minutes after addition of lysing agent. For use with Coulter Model S. 1 gal (3.8 liter) size in PolyPac container.
CS-615-2.....1 qt (946ml)/50.00
CS-615-1.....1 gal (3.8 liter)/20.00

Hematall Detergent

Removes lysing agents, cellular and other debris from aperture tube and sampling system. Reduces residual particulate count to insignificant level. Neutral pH. Minimal hemolytic properties. Ensures uniformly accurate analyses. Available in ready-to-use form or concentrate . . . just mix contents of one box (100ml) with Hematall Isotonic Diluent to make 2 liters. 1 gal (3.8 liter) size in PolyPac container.

Type	Cat. No.	Quantity	Price
Concentrate	CS-601-9	6x100ml	16.00
Ready-To-Use	CS-611-1	1 gal (3.8 liter)	14.00

Hematall Hemoglobin Detergent

Removes lysing agents and cellular debris from Coulter Hemoglobin Module. Blanks instrument for next determination. In PolyPac container.
CS-625-5.....5 gal (19 liter)/14.00

Hematall LA-Hgb Reagent

Develops Drabkin-like reaction for measurement with Coulter Hemoglobin Module. Packaged in polyethylene dropper bottles. No waste. Just add 3 drops and count. No handling of poisonous powders. Virtually no red cell stroma. Stable for 1 year. For use with Coulter Models F, FN, D, and Hemoglobinometer. Ready to use. 6 vials of 15ml.
CS-620-9.....Box 10.00

Printout Cards for Coulter Counter® Results

For recording results of Coulter Counter Model S Analyzer. Three-part card. All parts snap easily apart. Carbon used between second and third part. Third part made of tag card stock for permanent record. 20Lx8.2cmW.
CS-616.....Pk of 1000/25.00

Printout Cards With Adhesive Tabs

Same as CS-616 cards but with self-adhesive tab attached to third part of form. Sticks directly to tubes. 26Lx8.2cmW.
CS-617.....Pk of 1000/45.00

Sample Vials

Disposable Dilu-vial™ sample vial for automated blood cell counters. Designed for single use. Made of high impact, fast flow polystyrene. Optically clear, dust- and particle-free. One-piece construction, parallel sides. With leakproof snap cap. In plastic film-lined box.
3-341-13Case of 144/10.25

Hematology Analyzer

Performs RBC and WBC counts

Plus hematocrit and hemoglobin determinations

Clay Adams Model HA/4 Hematology Analyzer automatically puts diluted microliter blood samples through 4 essential blood tests and shows results on digital display in appropriate units. Uses either pre-filled diluent reservoirs or bulk reagents and unfilled reservoirs. (See accessories.)

Only 4 operation steps. (1) Dilute sample. For WBC and hemoglobin, use 260:1 standard dilution; for RBC and hematocrit, 67,600:1 standard dilution. (2) Select testing mode. (3) Initiate electronic count cycle. (4) Read and record results. No calculations needed.

Uses standard methodologies. RBC and WBC determined by cell conductivity method. Analyzer counts 18,000 red blood cells to represent RBC value and 8,000 white blood cells for WBC value. RBC counting range: 0 to 7.99 million cells/cu mm, in 10,000 cell increments. WBC counting range: 0 to 30.0 thousand cells/cu mm, in 100 cell increments.

Hematocrit values from red blood cells and cell size. Hematocrit range: 0 to 79.9% in 0.1% increments. Hemoglobin determined colorimetrically by dual beam filter photometer. Hemoglobin range: 0 to 30.0g/dl in 0.1g/dl increments. Calibrate analyzer to commercial reference or assayed patient samples. Easily adjusted. Electronic reference for retrieving preset calibrator.

Virtually maintenance-free. No shutdown or disassembly for cleaning. Eliminates soaking glassware. Aperture easily removed for cleaning. In-line filter minimizes instrument clogging.

Ordering Information: Solid-state circuitry. 32Lx33Wx28cmH. With two 90 μ m apertures and 2 filter assemblies. Shipping wt, 12kg (27 lb). 90-135V 60Hz.

Counting Chambers

For accurate white and red blood cell and platelet counts

Bright-Line Counting Chamber

Consists of molded glass compartment with H-shaped moat forming 2 counting areas. Thin metal surface on each counting area has double Neubauer rulings with 400 small squares in central 1mm square. When viewed through microscope, rulings appear as white lines on dark background. Flat, polished cover glass covers moat region 0.1mm above ruled surface. Difference in surface tension between cover glass and metal counting surface assures smooth capillary action for precise loading and more even cell distribution. V-shaped slashes at each loading side of both counting chambers reduce overflow into moat. With two 0.4mm cover glasses. Without pipets.

2-671-530.00
(AO 1492)

2-671-5

Levy Double Counting Chamber

Consists of small glass slide encased in Bakelite™ frame. Both counting areas have double Neubauer ruling with 400 squares in central 1mm square. With 2 cover glasses 20Lx26mmW.

Blood Cell Counters

Speed up counting and classifying

Calculator for Differential Blood Cell Counts

Lab counter with 8 keys representing 8 normal Schilling groups of leucocytes. Above each key is name and picture of particular cell being counted. Key is pressed down as many times as there are cells of that class observed in blood film. When total of 100 cells is counted, bell rings. Percentage of each cell type is read directly in window below each key. Handle on left rotated to clear all figures.

2-670-15149.00

2-670-15

2-670-14

2-670-13

Lab Counter with Nine Counting Units

Eliminates calculations when making leucocyte count. Eight units record up to 999 and have their own key. Last unit without key on right is the totalizing unit which records total number of strokes made on other keys. At 100 increments, totalizing unit rings bell. When totalizing unit records 100, each figure corresponding to individual keys automatically displays percentage. Two reset knobs, one on each side. Removable tabs on

counter top provide area for identification of classification being counted.

2-670-14167.85
(Clay Adams 4318)

With Six Counting Units

Same as 2-670-14 counter but with five keys and one totalizer unit each with 0 to 999 range and dual reset knobs.

Automatically measures hemoglobin
In just 18 seconds

No more dilutions, long reaction periods, or troublesome calculations during hemoglobin determinations. Model 255 Digiglobin™ Hemoglobinometer measures hemoglobin (g/100ml) in fresh, whole blood . . . displays results on digital readout over 0 to 25g Hb range.

One-step operation. No sample preparation. Simply pre-mix at least 1ml of blood sample. Immerse tip of aspirator tube into sample container. Depress "Start" button, and walk away.

During first 8 seconds, 20µl of blood is drawn into unit and mixed with 5.0ml of reacting diluent to achieve 1:251 dilution. Diluted blood then discharged into internal cuvet and mixed by magnetic stirrer to lyse red cells and develop hemoglobin reaction. After equilibrating for 10 seconds, final product is read by photometer. Results remain on digital display until next cycle is started.

Periodically throughout the day, flush diluent through sample plumbing system to clean out lines. Before shutdown, depress "Purge" control to flush all residual blood from sample plumbing system

Two-step daily standardization. Aspirate diluent and turn "Zero" control to adjust readout to zero. Aspirate commercially available blood control and turn "Calibrate" control to adjust readout to label value.

After standardization, Digiglobin can be easily checked throughout the day for measurement stability with neutral-density reference filter. Just flip filter into optical path . . . saves time and reference standard.

Ordering Information: Thick cold-rolled steel case with chemically-resistant baked acrylic enamel finish. Takes less than 0.2m² of lab bench space. With vacuum pump, all necessary tubing, diluent container, waste container with automatic level sensor, and manifolds.

Fisher Hemophotometer®

Measures hemoglobin in blood within 0.2 Hb/dl whole blood

Digital and analog models

Sealed dual-beam optical photometer measures hemoglobin in blood . . . fast and accurately. For use with blood samples prepared by cyanmethemoglobin method using Drabkin's Reagent.

Digital model displays results on 3-place digital readout over 0 to 25g Hb range . . . readable to 0.1g Hb. Uses either 1:251 or 1:501 diluted samples.

Analog model displays results on readout meter over 0 to 20g Hb range . . . readable to 0.2g Hb. Uses only 1:251 diluted samples.

Converts easily to flow-through operation by adding 2-678-20 or 2-678-21 waste pump accessory with special flow-through cuvet. Pour prepared sample into flow-through cuvet funnel and read results. Depress "Empty" button on waste pump module to evacuate into waste container.

Fiber optics allow source lamp to be located away from sample to prevent deproteinization of heat-sensitive samples. Also allows easy rear-panel access to source lamp and other components.

All optical components fixed and sealed in molded photometer assembly. Eliminates dust contamination and problems with optical alignment.

Only 2 simple operating controls: one to set zero. Another to calibrate instrument. Holds calibration to within ± 0.2 g Hb for long periods. No drift.

Easy to operate. Calibrate Hemophotometer with reference standard. Prepare sample . . . pour sample into cuvet. In seconds, read hemoglobin content directly from meter scale or digital readout.

After initial calibration, Hemophotometer can be checked daily for measurement stability with neutral density reference filter. Filter is flipped into optical path to provide built-in reference standard. Produces constant, reproducible transmittance value. Saves time and reference standard.

12-595

Ames Hema-Tek® Slide Stainer

Automatically stains blood-smeared slides

Produces uniform and reproducible staining of blood film slides to facilitate identification of cell types for faster differential counts. Each slide treated with identical amounts of fresh, standardized reagents slide after slide. Unit consists of conveyor system with compartment containing stain and reagent in plastic bottles.

Place up to 25 slides with dried blood films in vertical slots of loading platform. Turn instrument on. Conveyor system automatically removes slide one by one from loading platform and transports each slide face down across platen. When leading edge of slide enters platen area, sensing switch activates peristaltic pump that delivers metered amount of stain to capillary space between slide and platen. Stain remains in contact with blood film for pre-determined time as slide moves down staining portion of platen at constant speed.

Slide triggers next switch. Metered amount of buffer solution is delivered to produce 1:2 stain/buffer dilution. Angled baffle grooves in buffer portion of platen thoroughly mix buffer solution with stain. Slide triggers last switch. Rinse solution is delivered to slide to completely remove excess stain and buffer. Slide is drained, blown dry, and deposited in collection drawer. Processing time: 1 minute.

Add more slides to vertical slab in loading platform from time to time without stopping instrument. Up to 100 slides can be processed and deposited in collection drawer

Ordering Information: Bench-top unit. 47Lx37Wx19cmH. With 12-595-2 Stain Pak, 12-595-6 cannula set, 12-595-4 pump tube set. 115V 50/60Hz.

12-5952720.00
(Ames 4480)

Accessories Stain Pak

Pre-packaged dispensing unit. Consists of 3 disposable plastic containers with 3 standardized solutions including polychrome methylene blue stain, certified by U.S. Biological Stain Commission; phosphate buffer with pH 6.8; rinsing solution of phosphate; alcohol; distilled water with pH 6.9. Enough solution to stain 1000 slides. Weight-sensing device activates switch to turn off pilot light to signal for replacement when there is only enough stain for 20 slides.

12-595-220.00

FISHERbrand® Clinical Pipets

For wide variety of blood tests

13-645-43

Blood Diluting Pipets

With 3 types of calibration

Red and white cell diluting pipets with 11-line, 3-line, or combination of 11-line and 3-line scales. For 11-line scale: graduations on RBC pipets for 1:100 and 1:200 dilutions and on WBC pipets for 1:10 and 1:20 dilutions plus 11 lines for intermediate ratios. For 3-line scale: graduations on RBC pipets for 1:100 and 1:200 dilutions and on WBC pipets for 1:10 and 1:20 dilutions only. For combination scale: 11-line scale on one side and 3-line scale on other.

Beveled and polished tips and tops. Smooth surfaces that won't harbor dried blood. Permanent amber stain fused markings. Polished red or white mixing bead enclosed in bulb. White back glass. Catalog number, serial number, tolerances marked on side. Meet Fed Spec GG-H-216b and NBS Circular 602 standards. Without rubber tubing and mouthpiece.

Fisher Roto-Mix® Rotating Mixer

Thorough blood mixing without cell damage

Ideal for blood analyses, biological research, serological testing

Aluminum drum apparatus rotates vertically at slight tilt (constant 8rpm, $\pm 10\%$) producing gentle back-and-forth mixing action for complete cell suspension . . . without cell damage or foaming. Holds twenty-four 12 or 13mm OD collection tubes along outside edge and four 0.5ml control vials in center receptacles.

Tubes can be inserted or removed from plastic receptacles — even when drum is rotating. Receptacles are numbered for sample tube positions and lettered for control vial positions for quick identification.

Press quick-release button in center to release drum from drive assembly for cleaning, changing tubes, or remote loading at more convenient location. Three vinyl feet on back of drum let you use it by itself as collecting

tray. Just put tubes right into drum as you collect them . . . no need to transfer each tube from tray to mixer.

Ordering Information: Drum mounted on drive assembly. Motor in ventilated sheet metal housing, attached to base. Gray and black baked acrylic enamel finish. 19Lx22Wx25cmH. Shipping wt, 2.9kg (6.5 lb).

Fisher Roto-Rack[®] Rotator

Holds up to 40 tubes
Reproducible, controlled rates
from 6 to 30rpm

Ideal for keeping blood cells in suspension, blending radioimmunoassay preparations, and for general chemistries. Excellent for washing precipitates, dissolving slow-reacting samples, preparing suspensions, carrying out semi-micro extractions.

Holds up to 40 tubes in convenient numbered positions. Plastic bushings support tubes. All 40 openings accommodate tubes or vials up to 178mm long — 36 positions hold 12 to 13mm dia sample tubes and 4 positions for 15 to 17mm dia vials of blood controls.

Select speeds from 6 to 30rpm on control dial graduated in 10 divisions. Speeds are easily reproducible. Rack revolves in circle, tossing tube contents back and forth from end to end of tube. Guarantees homogeneous mixing. Eliminates balance problems associated with load distribution. Low profile and beam base prevent tipping.

Ordering Information: Made of heavy gauge sheet metal with baked acrylic enamel. 58Lx18Wx19cmH. With one 14-059-5 tube rack. Accessory tube racks let you prepare several racks in advance. Shipping Wt, 6kg (13 lb).

Accessories

Tube Rack

Same as supplied with Roto-Rack. Holds up to 36 tubes, 12 to 13mm dia tubes and four 15 to 17mm dia tubes. Stainless steel with integral carrying handles. For blood controls, cell counts, hematocrits, hemoglobins.

14-059-529.50

Spring Clip Rack

Holds up to 26 tubes with 15 to 17mm dia. Spring clips securely hold each tube in place. With 26 additional interchangeable clips for 10 to 12mm dia tubes. Anodized aluminum construction. With numbered tube positions.

14-059-1047.25

Chemistry Rack

14-059-1

Holds up to 40 tubes, 16 to 17mm dia. Ideal for chemical applications such as RIA and extractions. Stainless steel with integral carrying handles.

14-059-835.00

Control Bottle Accessory

Consists of 2 flexible plastic clips mounted on large stainless-steel spring clip. Each plastic clip accommodates blood control bottles up to 57mm in length and from 19 to 25mm in dia. Especially suitable for 7ml Coulter[®] Counter 4C cell control bottles. Accessory clamps on to 14-059-5 or 14-059-8 rack.

14-059-1212.50

Hema-Tek[®] Aliquot Mixer

Gently rocks samples back and forth
Holds up to 10 large-diameter tubes

Hema-Tek Aliquot Mixer cradles specimen tubes on reversible cushion with capac for 15 small or 10 large tubes. Quiet 18rpm operation provides uniformly mixed solutions in less than 3 min. Specimens can be added or removed without stopping mixer or disturbing samples. 115V 50/60Hz.

 (Ames 4651)

14-256

3-in-1 Unopette® Pipets

**Draw, measure, and dilute blood samples
For hematological and biochemical tests**

Becton-Dickinson self-filling, self-measuring capillary pipet dilutes, delivers blood samples accurately, efficiently, economically for RBC, WBC, platelet, eosinophil counts, hemoglobin, bilirubin, BUN, glucose, sodium, and potassium determinations.

Unopette system draws precise amount of blood into capillary pipet, then dilutes it with solution in its reservoir to proper ratio for testing.

In BUN and bilirubin Unopette pipets, Unocap™ Reagent Capsules are included in each reservoir. Once capsule is crushed, reagent is thoroughly mixed with diluent. Capsule keeps reagents fresh and separated from diluent until testing time. Eliminates need for reconstitution of reagents.

Includes precision glass capillary pipet and diluent reservoir. Pipet has protective polystyrene shield, overflow chamber, holder for handling ease. Polyethylene reservoir is pre-filled with premeasured diluent; eliminates mixing, dispensing, replacing stock diluents.

Pipet is marked with size number for easy identification. Flat base and holder provide clear viewing of sample.

20μl Unopette Pipets

Carton of 100 Unopette pipets only with 5 reusable vented bulbs.

FISHERbrand® Micro Blood Collecting Tubes

For Natelson and Caraway Technics

2-668-10

2-668-25

Glass collecting tubes have tapered bottom tips to facilitate micro-blood sample collection. Color-coded tops distinguish between plain and heparinized tubes. Natelson tubes have 250µl capac; 1.5-1.6mmID; 147±2mmL. Caraway tubes have 370µl capac; 1.8-2.2mmID; 75mm L. Heparinized tubes are treated with ammonium heparinate. For closures, see 2-668-20 and 2-668-35.

Type	Anticoagulant	Color Code	Cat. No.	Box of 100
Natelson	Heparinized	Red	2-668-10	12.75
Natelson	None	Blue	2-668-15	8.75
Caraway	Heparinized	Red	2-668-25	11.00
Caraway	None	Blue	2-668-30	11.00

FISHERbrand® Micro-Hematocrit Capillary Tubes

Plain and Heparinized Types

Low-taper wall construction guarantees error less than 1% absolute, 0.4 hematocrit, relative. Taper does not exceed 0.0254mm in 75mm. L: 75mm±0.02mm. ID: 1.07-1.24mm. Capacity: 40µl. Wall Thickness: 0.20mm ±0.02mm.

Available plain or heparinized with not less than 2 USP units of ammonium heparinate. Color-coded tube tips, vial caps, and labels; fire-polished ends. Conform to government specifications. For closures, see 2-668-70.

2-668-66

Type	Color Code	Cat. No.	Vial of 200	Box of 12 Vials
Heparinized	Red	2-668-66	2.95	30.60
None	Blue	2-668-68	2.30	25.80

Micro Blood Collecting Tubes

Heparinized Only

Micro blood collecting tubes contain minimum of 2 units of heparin ammonium as specified by U.S. Pharmacopoeia. 75 ±2mmL. 1.1 to 1.2mm ID. Wall thickness, 0.2 ±0.02mm. Minimum taper not in excess of 0.0254mm in 76.2mm. Plain end. Disposable. In snap-cap vials.

2-668-55Vial of 100/1.80
Box of 12 vials/19.50

Critocap® Tube Closures

2-668-20

Pliable plastic closures seal fire-polished ends of micro-blood collecting tubes and micro-hematocrit capillary tubes. Provide cushion for centrifugation. Fastened to stem for easy capping. Insert tube tip into closure; twist cap from stem.

For Natelson type micro blood collecting tubes, 2-668-10 and 2-668-15. Translucent. Twelve per stem.
2-668-20Pk of 100/2.60

For Caraway type micro blood collecting tubes, 2-668-25 and 2-668-30. Yellow. Ten per stem.
2-668-35Pk of 100/3.90

For micro hematocrit capillary tubes, 2-668-66 and 2-668-68. Ten per stem.
2-668-70Pk of 100/1.60

Hematocrit Tube Sealant

2-676-20

Critoseal®, a vinyl plastic putty. Seals any type of capillary tube with fast, heatless, flat-bottomed seal. Remains pliable. Will not dry out.

Supplied in tip-proof tray with numbered slots for 24 sets of tubes. With sufficient Critoseal for several hundred tubes.

Press tube tip into Critoseal-filled tray. Twist slightly. Sharp meniscus forms between sealant and sample. Blood-filled tubes stand upright in tray, ready for storage.

2-676-20Box of 6/5.40
Case of 36/29.40

Anticoagulant

Prevents coagulation for 10 hours

Using 25-gauge needle, dispense 2 drops of this 1% aqueous heparin solution into 10ml human blood sample to prevent coagulation. In 10ml, serum-stoppered vial. For laboratory use only.

2-668-100Box of 6 vials/24.15

2-668-100

Hematology Staining Set

Consists of 3-dish system in stainless-steel rack. Simplifies hematology staining. With three 8-818-33B white polypropylene staining dishes with lids, stainless-steel wire dish holder, slide holder for 25 slides.

Fisher Dry-Bath Keeps Temperature Constant

Fisher Model 145 accommodates up to 4 of 8 different heating blocks holding tubes from 6 to 25mm dia. Aluminum blocks conduct heat evenly. Keep temperature constant. Because tubes stay completely dry, Dry-Bath minimizes clean-up problems.

Temperature control dial graduated from 25° to 125°C. The temperature you select stays constant to $\pm 0.1^\circ\text{C}$. Also ideal for enzyme reactions, inactivation of sera, Rh studies, and cholesterol determinations.

11-715-100228.00

Interchangeable Heating Blocks Add Versatility

Black anodized aluminum alloy blocks for above system. Chemical resistant. With thermometer hole.

TissuePrep® Embedding Medium

TissuePrep® is easy to use because it's shaped into fast melting little pellets a mere centimeter in diameter and packaged in 5 lb (2.3kg) store-pour cartons. Formulation for TissuePrep consists of purified paraffin and synthetic polymer.

Open TissuePrep carton just like a milk carton. Simply pour pellets into melting pot. Pellets will never clump together but remain separate and free-flowing. Pellets melt quickly and disperse uniformly in pot.

TissuePrep makes it easy to slice ultra-thin sections. Ribbons smoothly and evenly formed. Won't crumble or crack. Cells protected from shrinkage and distortion. Assures flawless tissue specimens.

For embedding different types of tissue, TissuePrep available, with 2 different melting points guaranteed to $\pm 0.5^\circ\text{C}$ of melting point stated on carton. Four individual 5 lb (2.3kg) cartons in case.

Approx Melting Point	Cat. No.	Case of 20 lb (9.1kg)
56.5°C	T-565	19.00
61.0	T-610	20.65

Tissue Embedding Matrix

12-646-90

O.C.T. Compound, embedding medium with optimal cutting temperature. Formulated of water-soluble glycols and resins. Provides solid bond with object holders to reduce possibility of tissue being dislodged by knife pressure. Leaves no residue. 4 oz (118ml) dispenser bottles.

12-646-90Ea/2.17
Case of 12/26.00

Paraplast® Tissue Embedding Medium

12-646-106

Ideal for embedding all tissues

Highly refined compound of purified paraffin and plastic polymers of regulated molecular weight. In clear pellet form. Double filtered, free of foreign contaminants. Melts rapidly at 56° to 57°C . Cuts to $4\mu\text{m}$ with ribbon continuity. Paraplast infiltrated tissues possess elasticity which allows excellent sections. Sections adhere perfectly to slides without leaving stainable residue. In 1.1kg ($2\frac{1}{2}$ lb) bags; 8 bags per case.

12-646-106Case/15.95

Paraplast® Plus Tissue Embedding Medium

12-646-111

Reduces embedding time by $\frac{1}{3}$

Same as regular Paraplast but has dimethyl sulfoxide added. Better penetration and infiltration make it possible to cut brittle tissue to $2\mu\text{m}$ thickness with excellent ribbon continuity. Prevents cell shrinkage, distortion, hardening during infiltration process. In 1.1kg ($2\frac{1}{2}$ lb) bags; 8 bags per case.

12-646-111Case/16.30

Tissue Grinders

PYREX® Brand Tissue Grinders

Consist of glass tube and pestle with clearance of 0.13 to 0.18mm. Parts ground to medium grind. Designed to be motor-driven, employing friction clutch to eliminate damage to pestle. (Corning 7725)

O.D.xL	Cat. No.	Ea	Case of 4
13x100mm	8-414A	12.91	46.48

Cell Disruption Bomb

Ruptures cell tissue by explosive decompression

4-731-50

Breaks up cells and tissues into a uniformly homogenized suspension. Samples from few milliliters to 500ml can be treated.

Nitrogen taken into individual cells during pressure cycle expands and ruptures cell when pressurized suspension is suddenly released to atmospheric pressure. By varying nitrogen pressure and equilibrium period, rupture action can be controlled to provide mild treatment for fragile cells or complete homogenization of difficult tissues.

Extremely useful for breaking down *E. coli* and other bacterial cells, for homogenizing mammalian tissues, for obtaining extracts from living cells, and for studying cellular membranes from malignant tissues.

Ordering Information: With stainless-steel removable head, gas-filling valve, throttling valve for releasing charge, connecting tube for discharging samples, pressure gauge, nitrogen-filling connection with valves and fittings, wrench, instructions. 4-731-50894.00 (Parr 4635)

Drug and Chemical Blood Level Data Chart

Send for free copy today

Notebook-size chart, published by Fisher, available without charge to toxicologists and other forensic and life science personnel. Almost 180 different substances listed. From Acetaminophen (Tylenol) to Zoxazolamine (Flexin). For each, chart gives THERAPEUTIC OR NORMAL ... TOXIC ... and LETHAL levels in blood serum or plasma. For your free copy, check 5 on reader service card at end of blue index pages.

Fisher Histomatic™ Tissue Processor Model 165

15-182-100

Options of:

Controlled heat and/or controlled vacuum on solvent cycles

Controlled vacuum on paraffin cycles

The new Fisher Histomatic™ Tissue Processor features a fixed, stainless-steel tissue compartment with these unique features: option of controlled heat (to $45^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$) on solvent cycles. Option of controlled vacuum 15" (38cm) Hg on solvent and/or paraffin cycles. Safety thermostats on all heat cycles. An enclosed processing system (no loss of tissue resulting from power or mechanical failure).

You can vary the number of solvent baths and the length of time desired for those baths. Up to 10 solvent and 2 paraffin baths can be successfully drawn by vacuum to the tissue compartment to fix, dehydrate, clear and infiltrate tissue samples. Solvents and paraffin are then returned to their respective reservoirs. Any number of stations may be bypassed without removing them from the unit. This new instrument eliminates the dripping solvents and paraffin of old rotating-top processors.

The processor consists of 12 processing stations, 10 solvent (A) (See figure) and 2 paraffin (B); a stainless-steel tissue compartment with cover (C); and a control panel (D through M).

The 10 solvent stations are a series of 2-liter nylon reservoir bottles. These bottles are attached to the system by a series of 10 permanent screw caps. Two paraffin baths are contained in separate, heated pots maintained at a preset temperature of $63^{\circ}\text{C} \pm 1.7^{\circ}\text{C}$ by two 75-watt, thermostatically controlled heaters. Maximum paraffin pot temperature is 67.8°C . Panel lights on pot door indicate over-range conditions. All processing containers are front loaded for easy exchange and replenishing.

The stainless-steel tissue compartment has a magnetic stirring bar and contains a perforated basket which holds up to 110 tissue capsules.

Tissue compartment temperature for solvent processing cycle is preset at $37^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$. Screwdriver adjustment of this temperature is possible between 30° and 45°C . Actual solvent temperature in the compartment is displayed on a panel meter on the control panel. Over-range thermostat, factory-set at $45^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$. Panel light indicates an over-range condition.

Tissue compartment temperature for the infiltration cycle is preset at $60^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$. Screwdriver adjustment of this temperature is possible between 50° and 63°C . Actual paraffin temperature in compartment is displayed on a temperature panel meter. Over-range thermostat, factory-set at $65^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$. Panel light indicates over-range conditions. Tissue compartment is heated by two 150-watt heaters.

The control panel consists of an end-of-process indicator (D); an up to 60-hour delay timer (E); 12 timers, 0 to 4 hours with 5-minute resolution for each of the 10 solvent and 2 paraffin processing stations (F); an on/off solvent heat switch (G); a vacuum con-

trol for all stations or for paraffin only (H); an over-range temperature indicator for solvent and for paraffin (I); a process-mode switch for starting program and draining paraffin (J); an on/off power indicator (K); a dial indication of temperature from 20° to 65°C (1° divisions) for tissue compartment (L); and a dial indication of vacuum for 0-30" (0-76cm) Hg (M).

Operation is simple. Put tissue samples in tissue capsules. Place capsules in perforated basket. Place basket in tissue compartment. Set desired number of solvent processing stations for desired time (0 to 4 hours). Push process-mode switch. The beginning of the entire process can be delayed up to 60 hours by setting the delay timer.

Once the process is started, solvent from each of the desired number of stations is drawn by vacuum at 2" (5.1cm) Hg from the plastic reservoir bottles to the tissue compartment where processing occurs for the designated length of time. When the first solvent bath is done, the vacuum is released and the solvent is returned to the reservoir bottle. The next designated solvent is drawn up into the tissue compartment for the next step in the process. Every program ends with paraffin baths. Programs can easily be varied from sample batch to sample batch or can be accurately repeated.

Ordering Information: With perforated sample basket, 10 two-liter solvent containers, and 10 lb (4.5kg) Tissue Prep.

Accessories for Fisher Histomatic Tissue Processor

Process/Embedding Cassettes

12-653-15

Clear Plastic

Disposable clear plastic cassettes for holding tissue specimens for embedding operation and for storage in file. Cassette with 12-653-18 cover allows maximum flow of processing fluids for optimum fluid exchange during fixation, dehydration, and paraffin infiltration of tissue specimen. Saves approx 30% paraffin. Saves file space. Eliminates processing capsule. Angled end surface for identifying specimen number. Fits all 12-653-25 molds.

12-653-15.....Pk of 1500/70.00 (Lab-Tek 4191)

12-653-36

White Plastic

Disposable white plastic cassettes similar to 12-653-15 cassettes but are not affected by chloroform, benzene, acetone, THF. Provide pathology lab flexibility to use various processors and reagents without fear of distorting cassette. Use 12-653-18 cover. 3 dispenser boxes of 500 cassettes.

12-653-36Case of 1500/85.00 (Lab-Tek 4187)

Capsules with Cover

Disposable tissue capsules with press-lock cover. Top and bottom grid assure rapid circulation of fluids and retain small specimens. Etched marking surface for number identification. (Lab-Tek 4102 and 4112)

Tissue-Tek® II System

Organizes and simplifies tissue embedding

Tissue-Tek II Tissue Embedding Center provides a compact, durable system for precision tissue embedding and cooling of cast specimens. Consists of 2-liter paraffin storage pot; (see A on illustration); micro-switch dispenser (B); control panel (C); hot well (D); working platform with hot (E) and cold areas (F); chiller plate (G); cold storage drawer (H); waste drawer (J).

Select 12-653-25 base mold of appropriate size. Fill mold with molten wax. Place mold on warm work area. Insert specimen. Place mold on cold work area. Hold specimen in mold. Put 12-653-15 cassette on top of mold. Dispense more paraffin into mold to complete block. Chill mold on exchange plate. Remove specimen block from mold.

Ordering Information: Black xylene-resistant painted sides with brushed aluminum work areas. Self-contained Freon refrigeration compressor. Cooling plate for 40 cast samples maintains frost coverage to maximize heat exchange. Adjustable thermostat control. 37Lx61Wx30cmH. 115V 60Hz.

(Lab-Tek 4676)

12-653-32

Water Bath

For badly wrinkled and crumpled embedded tissue sections. After short period in bath, sections soften and flatten out on water surface. Built-in thermostat control with settings from ambient to 55°C. Easy-to-clean water tray. Front controls, orientation platform. 14Lx20Wx6.4cmH. 115V 60Hz.

12-653-32200.00
(Lab-Tek 4674)

Accessories for Tissue-Tek® II System, Contd.

12-653-22

Carrier

Stainless-steel carrier with two racks which hold 24 cassettes. Handy collection unit for preparing specimens for operational procedures and for conveying them through the processor. U-shaped harness with crosspiece perpendicular to base. Identification numbers of specimen on cassette visible at all times.

12-653-2238.50
(Lab-Tek 4195)

12-653-36

Process/Embedding Cassettes

Disposable white plastic cassettes similar to 12-653-15 cassettes but are not affected by chloroform, benzene, acetone, THF. Provide pathology lab flexibility to use various processors and reagents without fear of distorting cassette. Use 12-653-18 cover. 3 dispenser boxes of 500 cassettes.

12-653-36Case of 1500/85.00
(Lab-Tek 4187)

12-653-15

Process/Embedding Cassettes

Disposable clear plastic cassettes hold tissue specimens for embedding and storage. Cassette with 12-653-18 cover allows maximum flow of processing fluids for optimum fluid exchange during specimen fixation, dehydration, and paraffin infiltration. Saves 30% paraffin: file space. Eliminates processing capsule. Angled end surface for identifying specimen number. Fits all 12-653-25 molds.

12-653-15Pk of 1500/70.00
(Lab-Tek 4191)

12-653-18

Process Cover

Perforated, reusable stainless-steel cover helps to secure specimen in 12-653-15 or 12-653-36 cassette. Snap-lock over end cassette. Prevents specimen floaters.

12-653-18Pk of 25/8.60
(Lab-Tek 4194)

12-653-20

Microtome Chuck Adapter

Accepts cassettes or rings for speedy handling and proper positioning of specimen for sectioning. Simple cam action locks specimen in place. Fits most microtomes.

12-653-2048.00
(Lab-Tek 4196)

12-653-12

Filing Cabinets

Sturdy, dustproof two-tone cabinets hold 1500 embedded blocks. Six impact styrene file drawers with identification areas on drawer fronts. Legs on top and bottom.

With pk of 12-653-15 cassettes.
12-653-1092.00
(Lab-Tek 4190)

Without pk of 12-653-15 cassettes.

12-653-37103.80
(Lab-Tek 4189)

12-653-28

Cassette Organizer

Convenient and organized method for proper identification of histological specimens. Two bulk storage areas: one for 100 cassettes and the other for 100 process covers. Covered by two swing away lids. Top lid covers bulk storage areas. Second covers 3 cassette dispensers. Black xylene-resistant painted sides with brushed aluminum container. Carrying handle. 29Lx22Wx8.9cmH.

12-653-2889.00
(Lab-Tek 4197)

12-653-41

Microtome Waste Collection System

Funnel all trimmings from paraffin blocks sectioned on a microtome into plastic bag. Remove, seal, and discard single bag. Compatible with most microtomes used in hospital laboratories. Easily cleaned with common laboratory solvents. System includes plastic tray, bag holder, and 25 disposable waste collection bags.

12-653-4125.00
(Lab-Tek 4657)

Replacement Waste Collection Bags

250 bags per case.

(Lab-Tek 4658)

Accessories for Tissue-Tek® System

12-653-38

Cold Plate

Polystyrene cold plate uniformly cools surfaces of specimen blocks for improved microtome sectioning.

Not an electromechanical device, plate base freezes in 8 hours in freezer. For optimum results: place in freezer overnight.

Keeps specimen surface cold for up to 1½ hours. To prolong cooling and eliminate moisture accumulation, put plate in styrofoam insulator base. Stack trays for greater cold retention.

27Lx14Wx2.5cmH. Six cold plates with one insulator base per package. Case of 4 packages.

12-653-38Case/100.00 (Lab-Tek 4650)

12-652-10B

Embedding Rings

Plastic rings assure accurate positioning of tissue specimen in 12-652-15 and 12-652-17 molds. Place specimen in mold. Then press ring into mold cavity. Fill mold with embedding media. Serated edges of ring serve as lock. Etched margins are for marking.

12-652-10BBox of 1000/49.00 (Lab-Tek 4151)

Cabinet

Plastic two-tone cabinet with six drawers. Writing areas to record content of each drawer. Built-in dividers to accommodate 750 to 1000 embedding rings. Legs on top and bottom. With box of 12-652-10B embedding rings.

12-65172.00 (Lab-Tek 4169)

12-652-17

12-652-15 Base Molds

Stainless-steel mold for holding specimen. Produces blocks with clean, sharp edges. Use 12-652-10B rings. (Lab-Tek 4121-4133)

12-652-20 Mold Release

Liquid parting agent for use with base molds. Embedding media does not stick to base mold coated with mold release. Blocks separate from mold cleanly with square edges. For 12-652-15 and 12-652-17 base molds. (Lab-Tek 4141 and 4142)

Histo-Tek™ Slide Stainer

Performs hematoxylin-eosin process automatically

12-596-25

Automated stainer does every step of standard hematoxylin-eosin staining procedure — from xylene paraffin removal through coating and drying for coverslipping. Each slide is stained separately with fresh, unused solutions from 12-596-28 Histo-Tek Stain Pak. No more stained clothing and hands, solution spillage, cluttered work areas, cleanup.

Load magazine with 25 slides. Place loaded magazine on loading bar. Press magazine lock release and lower magazine until first slide rests on platen. Slides are then processed automatically.

As slides move along platen, metered amount of stain is delivered directly to each slide from bottled reagent in Stain Pak. After pre-determined time, slide is drained and fluid discarded. Slide moves further down platen for next solution application. Last stage applies thin coating of synthetic resin to slide. Slide is dried and deposited in collection drawer . . . ready to be coverslipped.

Stainer can be loaded with 2

magazines — up to 50 slides. After first slide is processed in 16min, remaining slides are processed one per min. Sufficient reagents in Stain Pak for 1000 slides.

Ordering Information: Bench-top instrument. 43Lx79Wx31cmH. With slide magazines, 12-596-28 Histo-Tek Stain Pak, 13 reservoir caps, slide magazine handle, vinyl dust cover, instruction manual. Net wt 34kg (75 lb). 110V 60Hz. 12-596-255718.97 (Ames 4446)

Histo-Tek Stain Pak

Pre-packaged unit with 13 reagent solutions for Histo-Tek Slide Stainer. Contains xylene, reagent alcohols, hematoxylin stain, dilute acid solution, dilute alkali solution, eosin counter-stain, coating resin. Provides all reagent in concentrations suited to time intervals programmed in slide stainer. Reagents for 1000 slides.

12-596-2889.00 (Ames 4445)

Happy times

MEET three new Swiss beauties. **Precision stop-watches** all ideal for food, pharmaceutical, environmental, petroleum and paint labs — and anywhere else timing is of the essence. They're shockprotected, antimagnetic, with meticulous 7-jewel movements, unbreakable mainsprings, chromed metal cases. Yet economy-priced, a boon to labs using large volumes.

See p 1178.

TissuePrep® Flotation Bath

Eliminates wrinkles and distortions in specimen sections after microtoming

15-464

Designed for use as microsectioned tissue flotation bath. Temperature ranges from ambient to 55°C within ±1.5°C.

Remove tissue from microtome. Deposit tissue on surface of bath. When embedding compound softens, specimen slowly unfolds and flattens out upon water surface. Retrieve tissue on microscope slide by slipping slide under section and lifting.

Place slide on edge of bath. Heat from walls will evaporate remain-

ing water. Tissue ready for further processing.

Ordering Information: Interior of black, spun 18-gauge porcelainized steel. Exterior, 16-gauge aluminum. Insulated with fiberglass. Thermostatic control screwdriver adjustment to control temperature. Front controls. 11Hx29cm dia. 150 watts. 115V 50/60Hz.

15-464137.00

Solvents for Clearing and Dehydrating

Purified and tested by Fisher reagent specialists especially for use in histology labs. Non-flammable solvents furnished in conventional glass bottles. Flammable solvents (designated by Cat. No. having suffix S) in metal safety containers with corner pouring spout. Meet OSHA Specs. All 5 gal (19 liters) containers are metal cans.

Flotation Bath

"De-wrinkles" sectioned tissue

Functional, easy-to-clean bath for flattening out tissue sections wrinkled by microtoming.

Bath's sleek base houses thermostatic temperature control and fluorescent lamp. Clear borosilicate glass flotation tray sits in bath well . . . simply lift it out for super-fast and easy water changes and cleaning.

Tissues are always easy to see during processing. They're illuminated from above and below water surface by built-in fluorescent lamp.

15-464-10

Check bath temperature at glance on mercury glass thermometer immersed in bath in holder provided.

Set temperature dial to 5° to 10°C below melting point of embedding medium. (Temperature range: ambient to 55°C, thermostatically controlled to $\pm 1.0^\circ\text{C}$.) Place tissue on surface of water in flotation tray. Floating sections will soften, unfold, and flatten out. Retrieve sections by slipping microscope slide under them and lifting out of water. Place slides on flat stainless-steel platform surrounding tray for drying.

Ordering Information: Wood-grained front panel. Other three sides finished in baked acrylic enamel. 37Lx33Wx11cmH. With mercury glass thermometer and thermometer holder

For 120V 50/60Hz.

Special-Purpose Work Stations

For histology and pathology labs

Two separate work stations from the Fisher Contempra™ furniture collection. One for gross pathology dissection work. Another for histology staining work.

Each station is complete, self-contained, and fully equipped to handle specific operations, with each phase or operation consolidated in one area.

Histology Staining Station

The entire operation — from staining through rinsing — can be confined to the stainless-steel sink area. Up to 18 stainless-steel pans can be supported in staining solution in five stainless-steel channels in sink. Channels are removable to give access to sink basin when rinsing or cleaning up. Two faucets provide hot and/or cold tap water and distilled water. And, don't worry about stains or spills any-

where, the entire unit is constructed of type 304 stainless steel.

Ordering Information: Over-all dimensions: 230Lx79Wx76cmH. Inside sink dimensions: 110Lx51Wx20cmD at shallow end and 30cmD at drain end. Drain includes 1½" SS waste outlet and stopper. Sink suspended between 2 base units, behind an enclosure.

Gooseneck faucets have a 16cm spread and 15cm spout clearance. Individual staining sinks each 16Lx17Wx15cmD with coved corners and a die-stamped removable cover. Shp wt 89kg (195 lb).

Self-rimmed sink

Stain pans are suspended over the sink

Hinged cover folds down over sink compartment

Cyto-Tek™ Slide Stainer

Handles Pap stains — automatically

Cyto-Tek™ Slide Stainer automatically performs entire sequence of steps in processing Pap smear slides from staining to delivery of finished slides. Fast processing is made possible by slide transporting system, specially designed platen, and 12-596-4 Cyto-Tek Pak containing 14 solutions each with pump and delivery tubes directed to specific area on platen.

Load magazine with 25 slides. Place loaded magazine on loading bar. Press magazine lock release and lower magazine until first slide rests on platen. Position first slide in magazine on platen, making sure slide does not rest on chain tab. Slides then processed automatically.

As slide, smeared side down, moves down platen, metered amount of stain is delivered directly to smear surface of slide. After pre-determined time, slide is drained and fluid

discharged. Slide moves further down platen for next solution application. Last stage applies thin coating of synthetic resin to slide. Slide is dried and deposited into collection drawer.

Stainer can be loaded with 3 magazines, up to 75 slides. After first slide is processed in 15 min, remaining slides are processed one per min.

Ordering Information: Sufficient reagents in stain pak for 1000 slides. 43Lx79Wx31cmH. With three 12-596-2 slide magazines, 12-596-4 Cyto-Tek Stain Pak, 14 reservoir caps, long slide magazine feeder bar, slide magazine handle, metal pre-wash rinse can, vinyl dust cover, instruction manual. Net wt 68kg. 110V 60Hz.

(Ames 4494)

Gross Pathology Station

Gross pathology operations require a working area with good lighting facilities, exhaust system, shallow and deep sinks, storage room, and disposer equipment. Contempra Gross Pathology Station has all this equipment plus more. This station has a shallow sectioning sink with pedal-controlled faucet; deep waste sink with faucet and automatic waste disposer; updraft unit with blower and charcoal filter; fluorescent light covered by milk-white Plexiglass panel. Equipment is housed in combination of Contempra cabinets to provide room for storing large formalin bottles, embedding molds, dissecting tools.

Ordering Information: Over-all dimensions: 151Lx76Wx170cmH. Light, disposer, and blower switches located on front panel. Updraft unit, sink basin, and deck top are chemical- and corrosion-resistant 18-gauge type 304 stainless steel. Sectioning sink dimensions: 71Lx41Wx6.4cmD at shallow end, slopes to 7.6cmD. Waste sink dimensions: 46Lx41Wx25cmD. Waste disposer: $\frac{3}{4}$ hp with a $1\frac{1}{2}$ " IPS drain connection. Shp wt 340kg (750 lb).

97-5684631.00

Dissecting and Post-Mortem Instruments. See pp 253-257.

AutoMicrobic System™

**Automatic detection, identification/
grouping, and enumeration of 9 urinary
tract pathogens plus antimicrobial suscep-
tibility testing. Test results at least twice as
fast as with traditional manual methods.**

The AutoMicrobic System™ enables the microbiology laboratory to furnish information for guidance of antimicrobial therapy the day after specimen collection. Diluted clinical specimens are used directly for inoculation of selective media in the Identi-Pak™ micro plate — a sealed, disposable 20-well plate. After automatic incubation cycle, culture material from positive wells can be transferred to the Sensi-Pak™ micro plate for antimicrobial susceptibility testing. Results show high correlation with manual techniques.

During the incubation cycle, serial electro-optical scanning of each well occurs once per hour. Changes in growth are monitored by a dedicated computer which plots and interprets growth patterns. System provides automatic printout at end of incubation cycle, furnishing enumeration and identification data for every specimen. During progress of cycle you can

obtain, for any specimen desired, a display or printout of interim test status indicating which organisms are positive.

Model 120 processes up to 120 specimens at a time. Model 240 can process 240 specimens. Identi-Pak and Sensi-Pak micro plates can be loaded into the system in any sequence and at any time, except during the four 6-minute scan periods occurring each hour.

Introduced initially to handle the major segment of the microbiology laboratory's workload — urine sample testing — the AutoMicrobic System in its present form is designed, without need for equipment additions or modification, to accommodate analyses of sputum, throat and fecal specimens, blood and spinal fluid. Micro plates for these specimen types are scheduled to become available as validation and correlation studies are completed.

™Trademark of McDonnell Douglas Corporation, developer and manufacturer of the AutoMicrobic System

System Benefits

1 Fast results. Positives recognized in 4 to 13 hours. Susceptibilities reportable overnight. Cuts time required by 50 to 80% versus traditional methods.

2 Less technologist time per specimen. Permits increased lab output, freeing technologists for testing that overloaded schedules have not allowed in the past.

3 Reduces manual record preparation. Automatic printout of test results with the necessary ID data.

4 Accuracy, reliability. Pre-programmed automation minimizes human errors. Advanced micro solid-state technology, fail-safe and error-detection circuitry, of the caliber that has supported space flight.

5 Freedom of access. Sequence of loading and retrieving test plates of same or different types is completely flexible. You can have information on status of any specimen whenever needed.

6 Simplifies supply needs, saves space. Use of pre-loaded micro plates greatly reduces ordering and stocking problems. Compactness minimizes storage and work space requirement.

7 Fisher service network. Prompt, expert service when needed from the Fisher branch that furnishes your system.

Urine Identi-Pak™ Micro Plate

Disposable, clear plastic, with 20 conical wells 3mm dia. Freeze-dried media in the wells are rehydrated when diluted specimen is injected. Well contents are accessible by piercing the tape covering. These organisms are analyzed via the selective media in 9 wells:

Pseudomonas aeruginosa
Proteus spp
Citrobacter freundii
Serratia spp
Escherichia coli
Klebsiella/Enterobacter
 Yeasts
 Enterococcus Group D
Staphylococcus aureus

Five wells contain enumeration media. Positive control well supports growth generally, for detection of organisms not identified. (Five blank wells are for future test expansion.) Seven molded spaces for easy ID marking. Over-all, 91Lx57Wx3mm thick.

Ordering Information . . . AMS™ System

AutoMicrobic System Model 120

Capacity 120 micro plates. Consists of diluent dispenser, filling module, reader/incubator module, computer/control module, data terminal, five 30-place reader/incubator trays, and two 10-place filling racks. Does not include Identi-Pak™ or Sensi-Pak™ micro plates, sample injectors, pipetters, or diluent. 115V 60Hz, 25amp.

2-720-12049,500.00

AutoMicrobic System Model 240

Capacity 240 micro plates. Consists of diluent dispenser, filling module, two reader/incubator modules (capacity 120 micro plates each), computer/control module, data terminal, ten 30-place reader/incubator trays, and two 10-place filling racks. Does not include Identi-Pak or Sensi-Pak micro plates, sample injectors, pipetters, or diluent. 115V 60Hz, 27amp.

2-720-24069,500.00

For detailed bulletin describing the AMS System, check no. 8 on reader service card at end of blue index pages.

Specifications of System Modules

Computer/Control Module for Model 120

Contains basic computer modules with 4K of core memory for data buffering and variable data storage; programmable memory (PROM) module with 5K of program instructions; and interface electronic module. Over-all, 64Lx36Wx60cmH. 110-120V 60Hz, 5amp.

Computer/Control Module for Model 240

Same as 2-720-124 but handles two Reader/Incubator Modules.

Reader/Incubator Module

Holds 120 Identi-Pak and/or Sensi-Pak micro plates in 4 trays. Tray carousel rotates ¼ turn every 15 minutes. Each trayload is scanned once every hour by LED (light emitting diode) arrays. Photometric system calibrated automatically every 15 minutes. Carousel can be rotated manually to remove micro plates. Temperature maintained at 35°C. Over-all, 64Lx36Wx60cmH. Powered by Computer/Control Module.

Data Terminal

Contains display, keyboard, and electrostatic printer. Over-all, 69Lx52Wx36cmH. Readout screen, 25Wx19cmH. Printer paper width, 216mm. 115V 60Hz, 1 amp.

Diluent Dispenser

Delivers 1.8ml and/or 5ml of sterile 0.5% saline diluent into respective chambers of 1 to 10 Sample Injectors simultaneously. Discharge is under pressure for thorough mixing of specimen. Selector switch for delivery volume.

Filling Module

Dual vacuum chambers with paired signal lamps indicating which chamber is in use. Each chamber takes rack of 10 micro plates with Sample Injectors for 5-minute filling cycle. Chamber, 32Wx12Dx15cmH. Over-all, 64Lx61Wx60cmH. 110-120V 60Hz, 13amp.

Sample Injector

Disposable, clear plastic, with 2 dilution chambers and transfer needles which penetrate inlet septa of micro plate. Removable filter caps prevent cross-contamination during micro plate evacuation in filling module.

Accessories and Supplies

Prices furnished on request.

Reader/Incubator Tray

Slotted for 30 micro plates.
2-720-126

Filling Rack

Holds 10 micro plates with sample injectors in diluent dispenser or filling module.
2-720-127

Sample Injector, Double Chamber

Used with urine Identi-Pak™ micro plates. Case of 120.
2-720-2

Sample Injector, Single Chamber

Used with Sensi-Pak™ micro plates. Case of 120.

BBL® Minitek™ System

Differentiates microorganisms

Choice of 35 substrates in paper discs

Virtually a miniaturized lab — Minitek System is designed for differentiating microorganisms by their effect upon chemical substrates. Determinations made by easy-to-read color changes based on pH and end-product reactions. Ideal for accurate classification of *Enterobacteriaceae* and as aid in identifying other organisms such as anaerobes and *Neisseria* spp.

System provides equivalent of a 10 tube-array with just one plate. Utilizes paper discs impregnated with appropriate substrates in plastic cartridges. Use only those substrates you want . . . no waste.

System includes dispenser to position appropriate substrates into plate wells . . . incubation humidifier that holds up to 10 plates . . . pipettor that automatically dispenses predetermined amounts of inoculum without reloading . . . sterile disposable tips . . . inoculum that requires no pre-incubation . . . color standards for comparing color changes . . . and Minicoder™ interpretation device.

Simple four-step operation: plate set-up, inoculation, incubation, interpretation. Eliminates pre-incubation and special inoculum preparation. Produces reliable results comparable to conventional tubed media.

System components are sold separately. Supplies are available individually and as complete sup-

ply sets for Anaerobe, Enteric, or *Neisseria* determination, including Minitek plates, pipet tips, broth, and differentiation discs.

Ordering Information Minitek Supply Sets

Anaerobe Set

Consists of 50 plates, 50 sterile pipet tips, fifty 1.2ml vials of Anaerobe Broth, and one cartridge each of the following substrates: Arabinose, Dextrose, Nitrate Reductase, Esculin, Glycerol, Lactose, Maltose, Mannitol, Salicin, Sucrose, Xylose.

B2501680.00

Enteric Set

Consists of 50 plates, 50 sterile pipet tips, fifty 1.0ml vials of Inoculum Broth, and one cartridge each of the following substrates: Arabinose, Citrate, Dextrose + Nitrate, H₂S + Indole, Inositol, Lysine, Malonate, ONPG, Ornithine, Phenylalanine, Rhamnose, Urea.

B2501773.85

Neisseria Set

Consists of 50 plates, 50 sterile pipet tips, fifty 1.2ml vials of *Neisseria* Broth, and one cartridge each of the following substrates: Dextrose, Maltose, ONPG, Sucrose.

B2501852.50

Minitek™ System Components and Supplies

10-Place Dispenser

Dispenses 10 impregnated discs simultaneously into reaction wells of testing plate. Delrin and stainless-steel construction. Locking bar for easy replacement of disc cartridges. Autoclavable.

B2500135.50

Single Disc Dispenser

Individually dispenses impregnated disc into reaction well of testing plate.

B25003Set of 6/11.65

Humidor with Sponges

For incubation of up to 10 plates. Wet sponge placed in humidifier provides sufficient humidity during incubation period for moisture retention in plates. Polycarbonate construction. Autoclavable.

B25004Pr/11.65

Replacement Sponges

B25005Pk of 10/3.05

Pipettor

Automatically dispenses up to 1ml of inoculum in 0.05ml increments into reaction wells of plate. Allows repeated dispensing without reloading. Symmetrical design for right- or left-handed operation. Uses sterile and non-sterile tips. Delrin and stainless-steel construction with automatic detipper.

B2500668.00

Pipet Tips

Sterile, disposable. For use with B25006 Pipettor. In trays of 10 tips. Trays designed to fit B25009 Organizer.

B25007Pk of 100/12.50

B25008Case of 1000/119.00

Tip Organizer

Convenient work station for holding up to 5 trays of pipet tips.

B2500934.00

Pipet Tip Receptacle

With cover.

B25013Pk of 2/3.35

Plates

Clear plastic stackable plates with wells for up to 12 different impregnated discs. Accepts discs from 10-place dispenser or from single disc dispenser. Frosted area along side of wells permits specimen identification. Large well for holding inoculum vial. Fits GasPak 100 Jar (see p 618) for study of anaerobes and B25004 Humidor.

B25010Pk of 100/23.00

Rack for Minitek™ Plates. See 11-814-15 on page 619.

Color Comparator Set

Used to interpret colors observed in reaction wells of plates for differentiation of microorganisms.

B25011Set/12.15

Minicoder™

Assists interpretation of *Enterobacteriaceae* reactions.

B2513616.55

Inoculum Broth

Cell-suspending fluid for transportation of inoculum to impregnated discs. Provides nutrients for growth of inoculum. For use with over 20 substrates. In 1.0ml screw-capped vials.

B25012Case of 100/34.00

Anaerobe Broth

In vials of 1.2ml.

B25130Case of 100/46.00

Neisseria Broth

In vials of 1.2ml.

B25140Case of 11/43.00

Biochemical Differentiation Discs. Paper discs impregnated with biochemicals for identification of microorganisms (both aerobic and anaerobic) that can be classified by using biochemical reactions. Takes place of differential tubed media and plated media. Each 10x72mm cartridge is equal to 50 tubes of media. Coded with substrate abbreviation.

Vacutainer® Brand Culture Tubes

Draw blood sample directly into tube of culture medium

Reduce contamination risk

Aerobic and anaerobic styles

Evacuated tubes pre-filled with 45ml of supplemented peptone broth. Provides closed blood culture system for aerobic and anaerobic growth.

Attach 2-658-138 Holder/Needle Combination. Tube draws 5ml blood sample directly into culture media. (5ml sample ensures 1:10 dilution ratio for culturing.)

Available with unplugged venting units (clear tip caps) for aerobic incubation or with plugged venting units (black tip caps) for anaerobic incubation.

GasPak® Anaerobic Systems

Sealable containers hold standard Petri dishes

Disposable generator-packs release carbon dioxide, remove oxygen catalytically

11-816

BBL® GasPak® Systems produce anaerobiosis in a closed container at room temperature. GasPak 150 accommodates up to 36 nominal 100x15mm or 12 nominal 150x15mm Petri dishes. GasPak 100 holds up to 12 nominal 100x15mm Petri dishes. Both models are available in vented and nonvented system. Also, GasPak 100 is available in disposable system which accommodates 8 nominal 100x15mm Petri dishes or 25 tubes, size 20x150mm.

For nonvented systems, place Petri dishes and GasPak hydrogen + carbon dioxide generator envelope and GasPak anaerobic indicator into jar. Add 10ml of water to envelope and close lid. Hydrogen evolves from envelope removing oxygen in presence of catalyst. During incubation, anaerobic indicator monitors atmospheric condition of jar

Disposable nonvented systems work in the same manner as regular nonvented systems except clear plastic bags with sponge strip for sealing are used instead of jars. Ideal as auxiliary unit in labs where work loads may vary.

Vented systems allow for use in an evacuation-replacement system using tank gas. Can be used in same manner as nonvented system by simply closing the vent and producing anaerobic conditions with the GasPak hydrogen + carbon dioxide generator envelope.

Systems can be used as carbon dioxide chambers by using GasPak disposable carbon dioxide generator envelope. Just place envelope in jar and add 10ml of water. Carbon dioxide evolves from envelope.

Ordering Information

GasPak 150 Large Anaerobic Systems

Nonvented System

Consists of polycarbonate nonvented jar; lid assembly with O-ring gasket and 3 charged catalyst reaction chambers; 10 extra catalyst charges; 10 disposable anaerobic indicators; 10 disposable hydrogen + carbon dioxide generator envelopes; Petri dish rack, and culture tube holder.

Tissue Culture Tubes and Flasks. See pp 633-640.

FISHER^{brand}® Disposable Petri Dishes

One-hand opening and closing No condensation on media Distortion-free viewing

FISHER^{brand}® Petri dishes are among the easiest dishes to handle with just one hand. Top and bottom edges are squared off (not rounded) to provide a firm, sure grip. The skirt of the lid is flared just enough so that the bottom can be covered quickly after streaking.

Because edges are squared, not rounded, the media is spread evenly over the entire bottom of the dish.

Three venting ribs built into the underside of the lid prevent build-up of condensation which would drip onto the media.

The flat lid of clear polystyrene provides a distortion-free view of cultures. Note the absence of a frosted marking area. Market studies indicate that many microbiologists prefer the totally unobstructed top. They use a grease pencil or felt-tip pen to mark dishes.

Extra-heavy polyethylene sleeves keep FISHER^{brand} dishes (20 per sleeve) sterile during transit, storage, and handling. Because they are not apt to tear, the sleeves can be saved and reused for other purposes.

Breakage is eliminated by a unique egg-crate shipping carton. Each sleeve is nestled in its own compartment to provide a cushion against the shocks of rough handling. It also helps maintain organization in the storeroom.

With Raised Ridge Around Top For Stable Stacking

The Stackable Dish. Select this catalog number for dishes that stack high and remain stacked, with a minimum of slipping, sliding, and resulting scratches. 15Hx 100mm dia.

Phage Typing Grid Dishes

For phage typing, gradient probe assays, antibiotic susceptibility testing, plate counts. Marked numerically in one direction; al-

phabetically in the other. Square shape gives nearly 30% more surface area in the same space required for a round dish.

Dia x H	Grid Squares	Falcon No.	Cat. No.	Case of
100(sq)x15mm	36x13	1012	8-757-140	500/96.18
150x25	32x25	1013	8-757-145	100/37.96

Quebec Style Grid Dishes

Convenient for milk, water counts. Grid has two rows of 1 cm squares at right angles to each other which are subdivided into nine equal parts. Style: 100x15mm.

8-757-130Case of 500/64.72 (Falcon 1010)

8-757-130

Seal Tight Dishes

Box-type dish with tight seal that prevents dehydration, is suitable for classroom observations. Style: 50x9mm. For water and aerosol testing, tuberculosis culturing, field sampling of botanical specimens, insects, and fungi.

8-757-105Case of 500/51.14 (Falcon 1006)

8-757-105

Rodac® Plate

For determining surface contaminants by direct contact, using a raised agar bed. Style: 65x15mm. Approx 16-17ml of agar is poured into the center section. After cooling, agar bed is approx 1mm above dish rim, protected by lid. Surface area: approx 25cm². Grid has 21 squares.

8-757-152Case of 500/72.82 (Falcon 1034)

8-757-152

Disposables . . . Special Purpose

Faceted Edge — Easy Handling

Disposable Sterlstar® dishes with faceted edge . . . 100x15mm. Crystal-clear polystyrene; flat; precision-manufactured to ensure uniformity of media thickness and easy stacking. 20 per pack; 25 packs per case.

8-757-165Case of 500/23.90

8-757-165

The Tight-Seal Dish . . . Uniform Media

Tight seal reduces amount of moisture entering or leaving dish. Sterile, disposable, non-toxic. Ideal for all standard microbiological membrane techniques using 47-mm filters. Useful for water/wastewater labs. 12Hx50mm dia in sleeves of 20 dishes each. Polystyrene.

8-757-18Case of 500/51.00 (Gelman 7230)

8-757-18

Lab-Tek Disposable Petri Dishes

Round Dishes

Round sterile dishes of crystal-clear polystyrene; can be economically thrown away or incinerated. 150x15mm dish for use with multi-sensitivity disc dispenser.

8-757-10

Dia x H	Lab-Tek No.	Cat. No.	Case of
60x20mm	4036	8-757-10A	500/30.75

8-757-15

Water/Wastewater Testing

The Fisher Water and Wastewater Analysis Methods Manual, with step-by-step procedures for over 40 current APHA and EPA tests, is yours for the asking. In easy-to-read form, this valuable handbook also contains illustrated descriptions of recommended equipment, reagent listings, handy reference

tables, conversion factors. Includes latest instrumentation and test kits conforming to standard method requirements. A great help for anyone in the field. For your copy, just check no. 3 on reader service card at end of blue index pages.

Handy Counter

For counting bacteria colonies, drops from pipet, pendulum strokes. Tallies up to 9999. Quickly reset to zero.

7-905.....10.00

Reusable Petri Dishes

Comply with Federal Specification NNN-D-1478

Dishes with reinforced beaded edges. Withstand repeated sterilization. Covers with fused-on red enamel inscription. Bottoms with white enamel inscription and vertical arrow on side to locate starting point for serial dilutions. (Kimble 23060)

With Replaceable Covers and Bottoms

Flat clear dishes with beaded edges. Withstand repeated sterilization, not affected chemically or thermally, resist blooming or fogging. Tops marked in green. Bottoms marked in white with triangular enamel reference point for serial dilutions. (Corning 3160)

Complete Set.

Inoculating Turntables

8-758-10

Mini-Inoculating Turntable

For 100 or 150mm dishes; hand-operated. Place dish on turntable (it's covered with non-skid rubber). Spin table with hand. Move inoculating loop slowly from edge of dish to center. Produces nearly concentric circles of evenly distributed bacterial colonies from edge of dish to center. Decrease loop travel time or turntable rotation speed for concentrated colony growth . . . increase for dispersed growth.

Ordering Information: Low-profile cold-rolled steel structure. Only 32mmH so you can steady your forearm on work surface while plating. Baked acrylic gray enamel turntable with black enamel weighted base. With raised gripper lip and recessed center disc. Holds 150 or 100mm Petri dishes. Dia, 15cm. Wt, 2kg.

8-758-10.....45.50

8-758

Petri Dish Turntable

For 100mm dishes; hand-operated. Place dish on table. Set table in motion with hand. Move inoculating needle slowly from edge of dish to center. Holds standard 100mm Petri dishes. Enameled iron table with 11cm dia.

8-758.....41.50

Fisher Scientific Company

8-758-50

Rota-Plate® Turntable

Motorized to speed plating and streaking
For 100 or 150mm dishes

Fisher Rota-Plate® Inoculating Turntable spreads colonies uniformly on agar surfaces which reduces chances of overgrowth and increases chances of colony selection. Consists of directly-coupled motor and turntable assembly.

Place agar-filled Petri dish on rotating plate. Raise lid on Petri dish. Turn switch on. Plate begins to rotate at 60rpm \pm 10%. Guide single inoculant loop radially across media surface from edge to center. Produces nearly concentric circles of evenly-distributed bacteria colonies. Colonies concentrated or dispersed simply by decreasing or increasing loop travel time.

Inoculation is easily accomplished once optimum pressure is developed between loop or other applicator and agar surface. Note: turntable rotation spreads colonies uniformly, reducing chance of overgrowth and increasing chance of colony selection. Greater number of single colonies develop toward center of dish.

Ordering Information: Housed in die-cast aluminum chassis. Raised gripper lip and recessed center disc allow use of both 150 and 100mm Petri dishes without interchanging equipment or using separate units. Non-skid rubber top surface, connector for remote control. 19Lx19Wx13cmH. Net wt, 2kg (4 $\frac{3}{4}$ lb).

For 115V 50/60Hz.

8-758-50.....109.00

For 230V 50/60Hz.

8-758-51.....120.50

Foot Switch. For remote control of 8-758-50 and 8-758-51 Rota-Plate.

8-758-55.....26.50

Fisher-Lilly Antibiotic Zone Reader II

Direct dial readings of zone diameters for simple assay of antibiotic strength

Determines strength of antibiotic materials by measuring diameters from 0 to 35mm of inhibited zones in Petri dishes.
Agar in Petri dish inoculated with bacteria. Sensitivity discs dispensed onto dish. After incubation, bacterial growth covers dish except for circular inhibited zone around each disc. Zone diameter function of antibiotic's strength. Light from base passes up through transparent and semi-transparent portions of agar. Adjustable black rubber belt facilitates positioning of dish relative to light source. Light then passed to reflecting mirror which reflects image to glass prism mounted on front. Arc from one edge of circle zone adjusted tangent with line on prism by zero adjustment wheel. Entire dish moved by turning final adjustment wheel until arc from opposite side of inhibited zone is brought tangent to same line. Dial moves with final adjustment and reads directly to 0.1mm.
Ordering Information: Cast-aluminum housing enclosing transformer, light source, rubberized cloth belt connected by metal spring. 2 pulleys. Rubber feet. 31Lx23Wx15cmH. 115V 50/60Hz.
7-906515.00

Accessories for Zone Reader

Filter Paper Discs

For assay of penicillin and other antibiotics. Specially prepared to distribute antibiotics evenly. Dia, 12.7mm.
9-897Box of 1000/3.85

Penicylinders

Used in standardization of penicillin preparations and studies of sensitivity of microorganisms to other antibiotics and sulfonamides. When used with 7-906 Zone Reader, area of inhibition surrounding cylinder is measured more accurately and more rapidly than by visual methods. 8 ODx10mmL.

Stainless Steel	7-907-5	6.75	64.80

Modular Petri Dish Filling System

Automatically opens, fills, closes, stacks 700 to 1200 dishes per hour

Tecnomat Filler

Frees technicians from repetitive chore of loading nutrient medium into nominal 100x15mm disposable plastic Petri dishes. Assures uniformity. Peristaltic pump dispenses preset volume into dishes fed from stack holder. Dishes are opened automatically in the sterilizable filling chamber, irradiated by a germicidal UV lamp. Filled dishes are closed and pushed onto a receiver platform smoothly and gently without ruffling the gelling surface.

Dispensed volume is determined by choice of delivery tubing diameter and setting of panel control which varies delivery time. Processes up to 700 dishes per hour with 15ml fill, up to 1200 per hour with 1 ml fill. Panel switch allows single fills by pushbutton control (or by optional foot switch, available separately).

Ordering Information: Inlet stack capacity, 20 dishes. Illuminated pushbutton controls. Panel adjustments for delivery volume and rate of dish through-put. Filling chamber easily removed for autoclaving. Built-in UV lamp. Over-all 20Lx45Wx60cmH. Adjustable legs.

With length of silicone rubber tubing 8mm IDx1.6mm wall. Tubing up to 9.5mm ID can be used for increased output. Does not include 8-760-7 Delivery Table or 8-760-5 Stacomat Stacker, either of which must be purchased unless user intends to improvise a receiving platform. 115V AC, 25w. Without reservoir for medium.

8-760.....2500.00
(Manostat 72-670-000)

Stacomat Stacker

Fits against delivery end of 8-760 Tecnomat Filler. Gently stacks filled Petri dishes 8 to 14 high as quickly as they emerge. Completed stacks are pushed smoothly onto a receiving table with 20-stack capacity. Preset stack height detected by an electronic counter. Can be switched off independently of filler operation to allow access to individual dishes, for inspecting suitability of fill.

Ordering information: With receiving table 45Lx45cmW. Over-all 50Lx128Wx45cmH. 115V AC, 25w.

8-760-5.....2650.00
(Manostat 72-675-000)

Tecnomat Accessories

Delivery Table. Receives loaded dishes from 8-760 Tecnomat Filler when Stacomat Stacker is not used. 50Lx65cmW. Ledge on 3 sides.

8-760-7330.00
(Manostat 72-676-201)

Add-on Delivery Table. Extends capacity of 8-760-7 Table. 50Lx65cm. Ledge on 2 sides.

8-760-9330.00
(Manostat 72-676-202)

Foot Switch. For single-fill operation of Tecnomat Filler. With connecting cable.

8-760-1160.00
(Manostat 72-676-204)

Hooded Filling Nozzle. Sliding shield covers tip of nozzle when withdrawn from filling chamber, to prevent contamination.

8-760-1563.00
(Manostat 72-676-206)

UV Lamp Tube. Replacement for Tecnomat Filler.

8-760-1361.00

Culture Media. See pp 677-693.

Fisher Count-all™ Counter

Automates routine counts of bacterial colonies, tissue culture clones, viral plaques, insect eggs

Performs microscopic counts — cells, autoradiographic grains, fly ash — with optional equipment

Versatile, easy-to-use counter with fast 4-digit readout, count-verifying circuitry, electronic field selector. Routine specimens are completed in seconds, from start to finish.

Standard model counts objects from 0.3mm to 10mm wide, including surface and subsurface microbial colonies in glass or plastic culture dishes, with or without lid. Also counts objects on photomicrographs, electron micrographs, roentgenograms. Optional stage adapter accessory takes tissue culture flasks. Microscope accessories permit using your triocular microscope to count objects down to 0.2 micron. You can easily adjust counter to ignore particles smaller than the objects of interest. Objects counted must be at least 0.3mm apart.

BCD output signal allows connection to an accessory printer or interfacing to data processor.

Rapid-scanning, high resolution television camera counts selected field of up to 100cm² in a fraction of a second. Electronic digital readout shows count total of up to 9999 within 1/2 sec after you press COUNT button. Video monitor shows exact field in clear detail. Verifies that settings are correct. Illuminated dot appears directly over each object counted so you can see what is being counted. This exclusive feature makes it easy to recognize when correct panel adjustments have been made for object size threshold and edge-detector sensitivity. Monitor is portable to allow most comfortable placement.

Electronic field selector and X-Y positioner let you count any circular or square zone within specimen boundaries. The selected field appears as an illuminated zone on monitor screen. Calibrated dial shows field area directly.

Top/bottom lighting switch changes illumination from reflected to transmitted light, whichever is required by degree of transparency of medium or substrate. Light/dark re-

versal switch lets you count objects whether darker or lighter than background. Instrument requires contrast of 30% or more between background and object.

Accessories enable economical performance of dozens of counting jobs that otherwise would require separate high-priced instruments.

Ordering Information: Countable object size 0.3 to 10mm (optional accessories extend this). Maximum field diameter, 115mm. Solid-state circuitry of high reliability, on modular boards. Equipped with 23cm TV monitor, 4-digit readout, 50mm camera lens, calibrated electronic field selector, size threshold adjustment, dual top/bottom lighting, light/dark reversal switch, count compensator switch, auxiliary camera jack, stage holder for culture dishes up to 100mm OD.

For 115V 60Hz

For 220V 50Hz
7-909-516950.00

Count-all Accessories

Printer. For permanent record on paper tape. Prints out 4-digit counts plus 2 auto-sequencing identification numbers. Includes interface.
7-909-151270.00

60mm Lens. Replaces standard 50mm lens of 7-909-50 Counter to permit scanning objects as small as 0.12mm.
7-909-53299.00

75mm Lens. For macro counting of objects from 0.08 to 0.3mm in field 50mm diameter or smaller.
7-909-8225.00

Top-light Stage. For culture dishes 50 to 100mm diameter. Provides optimal visualization for colonies on blood agars.
7-909-5566.00

Tilting Coliform Stage. Supports 50mm culture dish at angle of 12.5-15° for optimal detection of coliform colonies.
7-909-5475.00

Tissue Culture Flask Stage. For positioning 30ml TC flask.
7-909-1261.00

Dark-field Adapter. Gives scanner a countable view of hard-to-see objects. Useful for phage plaques which are nearly transparent.
7-909-10275.00

23cm TV Monitor. Same as supplied with 7-909-50 Counter. Can be used as additional viewing station.
7-909-2B285.00

Replacement Top Lamp.
7-909-1346.00

Replacement Bottom Lamp.
7-909-746.00

High Resolution Model Count-all Counter, recommended for microscopic counting at magnifications above 1250X, is available on request. Specify voltage.

Want more complete details on Count-all Systems for macro and microscopic objects? Check 7 on reader service card at end of blue index pages for descriptive bulletin.

Count-all Accessories for Microscopic Counting

Auxiliary Camera. Attaches to photographic tube of standard triocular (or monocular) microscope. Resolution is generally adequate up to 1250X.
7-909-11650.00

High Resolution Auxiliary Camera. Provides maximum density discrimination recommended above 1250X power.
7-909-17995.00

50mm Infinity-Focus Lens. Adapts auxiliary camera to optical system of microscopes using eyepiece in photographic tube.
7-909-19149.00

Camera Mounting Stand. Supports 7-909-11 or 7-909-17 auxiliary camera in scanning position. Easy to detach microscope for other use.
7-909-52300.00

30cm TV Monitor. Superior resolution of the larger screen permits observation of cellular detail.
7-909-2A390.00

Microscopes. For suitable types, see B&L BST8Z1H on p 783 and AO XL10TG-QW on p 792.

Bacterial Colony Counter

Electronic probe with digital counter . . .
Variable lighting for multi-purpose viewing

Combines electronic counting and multiple light effects in one compact unit for bacteriology, virology, mycology labs. Expedites counting of surface, subsurface bacterial colonies, and plaques growing on any type of agar. Facilitates observation of antibiotic inhibitions, photography of colony morphology, determination of precipitation reactions.

Align background plate on top of counter's adjustable supporting platform. Place Petri dish (100mm dia or smaller) containing bacterial sample on background plate. Insert adjustable nichrome electrode in agar at edge of dish. Touch surface of colony with second nichrome wire, mounted in hand-held probe to complete electrical circuit. Each time probe touches colony, circuit is closed and one count is automatically registered on 4-place digital counter. Mark of probe tip on agar surface shows whether given colony has been registered, eliminating missed counts or duplication.

Round support platform lowered by direct pressure and locked in place over 15mm range. Light source varied by moving platform. Five angles of light possible: transmitted, transmitted oblique, oblique, oblique reflected, reflected.

Ordering Information: Readout dial and thumb wheel to rezero dial. Adjustable 4X swing-away magnifying lens. With 7-910-2 grid plate, dust cover, instruction book.

For 115V 60Hz
7-910235.00

For 230V 50Hz
7-910-1240.00

Accessories

Black Grid Plate. Round, opaque, Lucite plate inscribed with Wolffhuegel grid. Dia 100mm. Thickness, 6mm. With 3 permanently attached steel pins.

7-910-213.50

Clear Plate. Same as 7-910-2 but translucent and without grid markings.

7-910-49.00

Black Satin Plate. Same as 7-910-2 but without grid markings.

7-910-69.25

Platform Lowered: reflecting lighting

Platform raised: transmitted oblique lighting

Quebec Darkfield Colony Counters

Visual-count model for manual tally

Electronic register model for automatic total

Illuminator design clearly reveals colonies of bacteria against dark background to facilitate counting.

Two models available: simple model without register, for visual count and totaling by operator; and electronic register model with electric probe, for automatic totaling. Electronic model operates as follows:

Place Petri dish (either round dish with up to 100mm dia or square plate up to 100Lx100mmW) on dish holder. Put ground probe into side of dish. Touch surface of colony with counting probe to complete electrical circuit. Each time probe touches colony, one count is automatically registered on 5-place digit counter.

Ordering Information

Quebec Colony Counter with Register. Compact two-tone unit. 25Lx28Wx27cmH. Reset bar, panel switch, hinged door, inclined

view screen, tilt leg, 1.5X standard lens on adjustable focusing rod. With electric probe. 110V model UL listed.

For 110V 60Hz

7-908-7453.00
(AO 3327)

For 220V 50Hz

7-908-8453.00
(AO 3328)

Quebec Colony Counter without Register. Same as 7-908-7 but without electric probe and register. Operator must tally the visualized colonies. 110V model UL listed.

For 110V 60Hz

7-908-5221.00
(AO 3325)

For 220V 50Hz

7-908-6221.00
(AO 3326)

Accessories for Quebec Colony Counters

For electronic register model:

7-908-9

Marking Pen. Allows count to be made on closed Petri dish. Each time pen point is pressed against dish, a count is registered on counter.

7-908-949.00
(AO 3322)

7-908-11

Pushbutton Counter. Hand-held device for tallying colony count.

7-908-1127.00
(AO 3324)

For either model:

7-908-13

Auxiliary Lens. 1.5X lens fits over standard lens provided with Quebec Colony Counter to provide 3X magnification.

7-908-1339.00
(AO 3331)

7-908-15

Counting Plate. Stewart. White-ruled target guide.

7-908-1518.00
(AO 3333)

Fisher HandiSwab[®] Culture Collection and Transport System

Mailable pack, easy to reseal
Preloaded with transport medium
Cultures reach lab moist and viable

Prepackaged culture swab system brings samples to their destination viable and prime for transfer. Convenient, unbreakable tube pack of molded plastic and paper contains sterile dacron-tipped swab and 1 ml transport medium (choice of modified Stuart or Amies). Imprinted space on label for patient name, number, and date. No glass to contend with.

Peel apart end for access to swab. Take sample, reinsert swab into tube pack. End of swab snaps

off easily to prevent contamination. Press tape shut to reseal. Squeeze compartment containing medium to moisten swab tip. Carry to lab or put in envelope and mail. No chance of breakage.

Swab remains moist up to 72 hours under normal conditions. Pat. No. 3,835,834.

Type	Cat. No.	Box of 200	
Stuart (mod.)	14-959-95	49.50	14-959-95

14-959-90

Falcon Polyester Swab

Single, polyester fiber-tipped applicator, individually wrapped in easy-to-open Peel-Apart package. Sterile. Size: 15cm. **14-959-90**Case of 1000/24.36 (Falcon 2069)

Lancer Polystyrene Culture Tube

**For blood banks,
coagulation labs**

14-957-70

Optically clear 12x75mm polystyrene tube with-stands centrifugation; eliminates glass activation in coagulation testing.

Packaging minimizes breakage during shipment; insures particle-free tubes. Carton fits standard size lab drawer. 250 tubes per box. 4 boxes per case. **14-957-70** Case of 1000 27.95

Disposable Plastic Culture Tubes

FISHERbrand® Polypropylene Culture Tube

Tough enough to stand centrifuging

Size 12x75mm. Disposable. Ideal for numerous testing applications including RIA procedures. Wall thickness is adequate to withstand centrifugation.

Special molding process avoids leaks and cracks. Slight lip at top provides seal in 14-961-12 Cap.

Capacity 5ml. In bags of 125. Without caps.

14-959-16Case of 1000/30.00

Polyethylene Cap

For FISHERbrand culture tubes 14-959-16, 14-961-10, 14-961-20. Forms leakproof seal.

14-961-12Case of 1000/19.35

14-959-16

FISHERbrand Polystyrene Culture Tubes

Tough . . . inexpensive

Without cap. Size 12x75mm. Same as 14-959-16 but of clear polystyrene. Heavier wall than competitive tubes allows centrifugation at high speeds. In bags of 125.

14-961-10Case of 1000/34.28

With cap. Same as 14-961-10 but with 14-961-12 Polyethylene Caps. In bags of 125.

14-961-20Case of 1000/58.18

14-961-10

14-961-12

Falcon® Culture Tubes

Tested for sterility and microbial compatibility. Falcon culture tubes arrive ready to use. Use once. Throw away. No chance of residual contamination.

Available in clear polystyrene or translucent polypropylene. Biologically tested.

Polystyrene tubes 14-959-38C graduated at 0.5 and 5ml recommended for specimen transport. Used in collecting venous blood for coagulation studies.

All screw cap tubes have outside threads and unconstricted neck, making filling and pipetting easier.

Snap Cap

For 12mm polystyrene tubes

Polyethylene cap fits Falcon 12x75mm polystyrene tubes; 14-959A, 14-959-1A, 14-959-2A, and 14-959-6. Four bags of 500 each per case.

FISHERbrand® Disposable Glass Culture Tubes

Choice of flint or borosilicate glass

Flint glass. Specially annealed to reduce breakage along stress points. They take centrifuging and other rough uses better than ordinary disposables.

Smooth, well-rounded tops and bottoms prevent cuts. Sizes 10x75mm, 12x75mm, and 13x100mm are packed in dispenser boxes of 250. Other sizes are packaged side by side in parallel rows against a styrofoam-lined divider.

Borosilicate glass. You get the chemical stability and biological inertness of hard glass at the price of disposables. Ideal for tissue culture and bacteriological work. Start clean each time — samples not lost because of contaminated, cloudy, or scratched tubes.

Sizes 10x75mm, 12x75mm, and 13x100mm are packed in dispenser boxes of 250.

14-958

Disposable Glass Culture Tubes with Fused-In Color-Coded Labels

5 color choices and 5 sizes
Markings go on smoothly, stay on

14-957-10

FISHERbrand®. Flint glass. No more lost or peeling labels. These culture tubes have handy fused-in color patches, uniquely textured to accept any type of ink or pencil. Even ball point pen writes smoothly. Expose color patches to heat, steam, hours in water bath. Markings remain completely unaffected. Large enough for all necessary information. Not dime-sized frosted spots . . . full 38mm long labeling areas. Save hours of labeling time. In five pastel colors — ideal for color-coding systems. Five sizes.

Lab-Tek Tissue Culture Chamber/Slide

Multi-chamber container miniaturizes tissue culturing. Allows test and control cultures to be maintained at one time, using one or more cell strains. Consists of tray with separate chambers and gaskets; lid; clear glass bottom slide with front writeable frosted surface. Visual record of significant cell changes since individual chambers can be fixed at any stage of testing. (Lab-Tek 4801-8)

Disposable Plastic Tissue Culture Flasks

10-126-1

Falcon® Polystyrene

Specially formulated and processed polystyrene affords excellent cell attachment. Flat growth surface is optically clear, permits distortion-free microscope examination.

Size 30ml has rubber-lined screw cap; neck opening 10mm. Size 50ml has nontoxic plug-seal screw cap. Neck of size 50ml is slanted; neck opening 13.5mm, large enough for 10ml pipets.

The 250ml flasks have 17mm neck opening, large enough for 25ml pipets. Choice of plug-seal screw cap or rubber-lined phenolic type (popular for open system incubation. Spins on and off easily).

Sizes 30 and 50ml are packed 20 per sleeve; 250ml, 5 per sleeve.

10-126-25

Lab-Tek Flaskette™

Biological growth chamber. Neck is tilted 8° for easy access to cells. Large 9mm mouth allows unequalled freedom of manipulation with 5ml pipet. No bulky equipment or large amounts of reagents needed. No spillage; low risk of contamination. Any residue left in neck flows back into chamber. Typical uses: cloning, plaquing, karyologic studies, fluorescent staining, general cytologic examinations, chemotherapy assay, cytogenetics, tumor culture, autoradiography, differential staining.

Total volume: 16ml. Suggested working volume: 5ml. Non-toxic, optically clear, sterile. Ready to use in convenient incubator tray. Standard glass slide allows cells to be fixed with acetone once plastic chamber and gasket are removed. With non-toxic, self-sealing cap. Small size, 87Lx25Wx21mmH, saves incubator and workbench space.

Wheaton Celstir® Culture Flasks

Built-in impeller to stir suspensions

Wheaton "200" brand borosilicate glass flask with screw neck and impeller assembly. Provide maximum surface interface between culture and flask atmosphere. Magnetic impeller assembly rides close to bottom of flask but does not touch it. Nylon screw cap has Teflon®-faced silicone rubber liner for excellent sealing. Eliminates need for clamps, O-rings, high vacuum grease. All parts in contact with culture are Kynar-coated stainless steel, Teflon®, or borosilicate glass. Side arms for: pH probes, inoculation port, or air filter.

Wheaton Biostir® Magnetic Stirrer

Heavy-duty drive unit for Celstir® flasks

Produces gentle stirring action at speeds below 50rpm, adjustable continuously to over 1000rpm. For mixing cell suspensions in Celstir® Suspension Culture Flasks. Transistorized solid-state control with built-in circuit breaker. Speed control knob also turns unit off. Epoxy enamel finish. Minimal heat transfer to top surface. For continuous use in incubators and cold rooms. Compact, 19Lx19Wx15cmH. 120VAC, 100w.
6-440.....139.00

6-440

Biostir® 6 Magnetic Stirrer

Multiple-drive unit for 6 Celstir® flasks

Wheaton. Single housing contains 6 Alnico V magnets driven in pairs by 3 heavy-duty motors. Uniform speeds from 50 to 1000rpm are settable independently for each motor by 3 solid-state controls and reference meter. Sufficient power for six 8-liter culture flasks. Useful for suspension cultures, trypsinizing, and various general stirring requirements. Suitable for use in incubators and cold rooms. Aluminum housing with epoxy finish. Rubber mat surface keeps flasks in place. Four leveling legs. 49Lx74Wx17cmH. 120V 50-60Hz. 288w
6-428.....495.00

6-428

Roller Culture Apparatus

Continuous rotation at accurately regulated speeds

Wheaton. Two models with choice of 2 or 4 pairs of rollers for cylindrical bottles 108 to 121mm dia. Each pair of rollers takes 1 or 2 bottles with total length of up to 290mm. Speed range 0.2 to 8rpm, adjustable continuously by solid-state controller.

Improves media mixing and oxygenation during culture growth. Reduces risk of contamination by eliminating the additional handling required with stationary culture bottles.

Vessels are supported in tiered decks on top of drive unit. Positive-drive gear belts rotate

the paired rubber rollers. Four leveling legs on base allow unit to be tilted back up to 5° if desired.

Circuit compensates for line voltage fluctuations to assure constant speed.

Ordering Information: Consists of drive unit with 1 or 2 decks, each with 2 pairs of rollers. Solid-state speed control. Gear-type motor. Moving parts rotate in sealed ball bearings or self-lubricating nylon bearings. Epoxy enamel finish. Without bottles. 110V 60Hz, 150w.

Pairs of Rollers	No. of Decks	LxWxH	Cat. No.	Ea
2	1	31x31x25cm	6-410	240.00
4	2	31x31x41	6-411	325.00

6-441

Modular Roller Apparatus

For large scale propagation of monolayer cell cultures

Roller decks can be added to accommodate up to 90 bottles

Wheaton. Series of 9 models for rotating standard roller bottles in tiered 5-position decks. Decks can be added if desired to provide up to 9 tiers. Maximum total capacity: 45 bottles up to 570mmL, or 90 bottles under 285mmL.

Suitable for continuous operation. Usable in large incubators or cold rooms.

Speed range 0.25 to 12rpm, adjustable steplessly. Solid-state speed control provides $\pm 1\%$ accuracy. Actual speed shown on panel meter.

Rubber rollers are mounted on aluminum

shafts with bottle retainers on ends. Shafts rotate in lifetime lubricated ball bearings. Coupled to motor through positive-drive gear belts.

Ordering Information: All models include basic drive unit with attached 5-position deck. Models with 10 or more positions include 1 to 8 additional 5-position decks to provide increased capacity shown in table. Solid-state speed control, with reference meter. Heavy-duty motor. On 4 rubber casters. Without bottles. 115V 50/60Hz, 50w.

CulturTek™ Pipets

Speedier tissue culture transfers
Reinforced for extra durability

FISHERbrand®. Fills and drains quickly; speeds cell transfers. Extra rugged pipet originally developed for in-house tissue culture cell production at Smith, Kline and French Laboratories. Made of heavy borosilicate glass. Features reinforced tip and mouthpiece bulb joints. With greater resistance to chipping and breakage than conventional volumetric pipets. Shorter length makes pipets easier to handle and wash. Fill line, capacity, catalog number markings are fused on, can't wash off. Color-coded.

Microtiter® System

Fast, economical, accurate serial dilutions for virology, serology, immunology
Reduces technician time up to 75%
Provides extremely reliable dilutions: ±2% accuracy
Saves space

14-245

Microtiter® System performs 2-fold serial dilutions through microtitration technique. Valuable for tests requiring hemagglutination, hemagglutination inhibition, complement fixation. Replaces macro (test tube) technique with 8-fold savings in saline solution, cells, sera, antigens, complement. Compare minimum equipment for 100 investigations:

Macro Technique:
840 test tubes
100 pipets
21 test tube racks
accessory equipment

Microtiter System:
9 titration plates
4 pipets
8 diluters
Eight serial dilutions are made simultaneously. Entire 12-step dilution takes less than a minute. With titration plates, pipets, and diluters. Available in kits or separately.

Microtiter® System Kits:

See description of each item under Supplies (below).

14-245-54

12-245-53

Supplies for Microtiter System, Contd.

Transparent Plate Sealers

Prevent evaporation; provide unhindered viewing. Available in tape or sheets.

Cooke No.	Description	Cat. No.	Price
220-12	Tape, plastic. Pressure sensitive. Fits 14-245-20 dispenser. 72 yd (66m)/rl.	14-245-19	Ea/15.00
220-12A	Tape, plastic. Pressure sensitive. 36 yd(33m)/rl.	14-245-119	Ea/12.00
220-30	Sheets, pre-cut. Individual; self-adhesive. Box of 100.	14-245-18	Box/12.00
220-30-1	Pre-cut sealers. Non-toxic. Box of 100.	14-245-118	Box/13.00

Tape Dispenser

Dispenses, cuts sealing tape. Anodized aluminum tape dispenser cuts exact amount of rolled tape to cover one titration plate. For use with 14-245-19 tape. With rubber feet for use on flat surfaces.
14-245-2095.00
(Cooke 220-15)

14-245-20

Support Plates

Molded rubber plate holders fit beneath titration plates, prevent slipping during titration, support plates while centrifuging. Make tape sealing easier — prevent flex vinyl plates from bending under roller pressure.

14-245-16

Cooke No.	For	Cat. No.	Ea
220-26	Flex vinyl plates (p 000)	14-245-16	13.00
220-26A	Rigid polystyrene plates (p 000)	14-245-17	13.00

Tape Roller

Roller ensures even seal. Tape roller perfectly seals each well of titration plate when rolled over sealing tape. Prevents creases that can cause well leakage.
14-245-219.00
(Cooke 220-10)

14-245-21

Disposable Pipets

Filled by 14-245-24 suction bulb. (Cooke 220-35 and 220-36)

Filter Cartridges

Prevent oral contact with reagents. Cellulose acetate. Fit permanent pipets described above.
14-245-25.....Box of 100/5.00
(Cooke 220-13)

14-245-24

Suction Bulbs

For pipets listed above. Rubber. Useful for pipetting antigens or noxious solutions. Capac: 5ml.
14-245-24.....Box of 6/3.75
(Cooke 220-21)

14-245-25

Microdiluters and Accessories

Deliver reagents by capillary action. Microdiluters calibrated to ±2% accuracy. Titanium alloy stainless steel with aluminum handles. Tapered end of handle gives evenly spaced spread of tips when held together for manual twirling. Can be sterilized by flaming without loss of accuracy. Aluminum stand recommended for diluter storage and protection.

Cooke No.	Tip Capac	Cat. No.	Box of

(Cooke 220-84)

14-245-33

Carrying/Storage Case

Holds equipment. Holds 16 titration plates, 36 microdiluters, and 6 pipets in their 14-245-34 stand. Halves separate; can be used as wash racks for plates. Polypropylene. Shock-proof, heat resistant, acid/solvent resistant. Autoclavable. 28Lx12Wx31cmH.

14-245-3050.00
(Cooke 220-2)

Wash Rack

Half of 14-245-30 carrying/storage case. Without fasteners. Polypropylene.

14-245-3125.00
(Cooke 220-3)

14-245-30

Single Channel Dispenser

For large volume dispensing. Holds up to 1.5 liters of single reagent, antigen, serum. Dispenses 50 μ l. With dropping tip and ring stand for reagent reservoir.

14-245-36135.00
(Cooke 220-28)

14-245-36

Semi-Automatic Minipipetter[®] and Minidiluter[®]

Minipipetter[®]

Dispenses 25 μ l volumes to 8 samples simultaneously. Adds reagents from 8-tip manifold to each row of Microtiter[®] 96-well titration plate. Plates advance to next row by pushbutton control. Pipetter easily adjusts for delivery of reagents with different viscosities. Hand toggle switch or foot switch for single-row or continuous dispensing action. Manifold, tubing, valves are autoclavable.

Ordering Information: With 5 tubing adapters, 25 tuberculin syringes, filler kit, 8-tip stainless-steel/nylon manifold. 115V 60Hz.

14-245-60 895.00
(Cooke 350-1)

Minipipetter supplied with 12-tip manifold on special order

Rental and Leasing Programs

Both rental and leasing agreements are available for purchase of capital equipment. Terms can be individually suited to the customer's needs. For further details, contact your local Fisher sales representative.

Minidiluter[®]

Performs accurate serial dilutions. With reversible plate carrier, processes 96-well titration plates . . . either 12 samples through 8 rows or 8 samples through 12 rows. Each of 12 microdiluters picks up 25 μ l of diluted sample . . . transfers it to next row of wells. Advance plate one row by pushbutton control . . . repeat dilution process through all 8 or 12 rows of plate.

Carrier assembly guides titration plate to diluters. Diluter head manually lowers each diluter into well. Brake prevents cross-contamination and splashing. Variable dilution rotation speed control on front panel.

Ordering Information: With box of twelve 25 μ l microdiluters. 115V 60Hz.

14-245-61 895.00
(Cooke 360-1)

Minidiluter supplied with twelve 50 μ l microdiluters on special order.

14-245-61

Stethoscopes . . . Two Convenient Types

Ford-100 Model

Hard rubber bell and earpieces. Spring between metal ear tubes holds them at proper tension when in use.

14-409-100 4.50

Lightweight Model

Mushroom-shaped ear tips. Lightweight (99g) stethoscope with tapered gray vinyl tubing. Non-chill ring, rotating binaurals, double-head highly sensitive chestpiece. All metal parts are chrome-plated. Epoxy-fiberglass diaphragm.

14-409-110 30.00

14-409-100

Sphygmomanometers for Blood Pressure

Aneroid Type

Blood pressure instruments with hook-type arm cuff, connecting tube, inflating bulb, control valve. Accurate readings throughout entire 0 to 300mm range. Certified, self-verifying. In black leather carrying case. 18Lx5Wx10cmH. Net wt, 454g.

14-409 Ea/75.80
Case of 8/545.85

300mm Mercury Type

Includes fully recessed tube, easy-to-read aluminated scale, complete latex inflation system, mercury reservoir with shut-off valve. Guaranteed against breakage for ten years. In Duralumin case. With cuff, bag, bulb, and valve. 35Lx9.5Wx4.8cmH. Net wt, 1 kg.

Special Patient Chairs

Ensure safe,
comfortable venipunctures

Labconco Blood Drawing Chairs

With swing-down arm rests

Unique padded arm rest extends completely across chair so you can draw blood from patient's left or right arm, without moving him. If patient should faint or fall forward, safety arm will catch and hold him. Arm rest adjusts vertically to accommodate any size patient comfortably and securely. And it can be hinged on either right or left side.

Seat constructed of compression-molded polyester, contoured for maximum comfort. Wide stance keeps it stable and upright. Three models available.

Basic Chair. Polyester seat, supporting legs, and padded arm rest. 66Lx70Wx95cmH. Shipping wt, 14.5kg (32 lb).

91-290.....250.00
(Labconco 11200)

Storage Cabinet on Side. Same as 91-290 but with two-drawer storage cabinet on side. Shipping wt, 23.5kg (52 lb). 107Lx70Wx95cmH.

91-291.....435.00
(Labconco 11201)

Two Chairs with Center Storage Cabinet. Two basic chairs attached to sides of two-drawer storage cabinet. With mounting bracket for cabinet. 173Lx70Wx95cmH. Shipping wt, 38kg (84 lb).

91-292.....675.00
(Labconco 11202)

Lancer™ Blood Drawing Chair

With angled side arm rests

Key feature: two arm rests that adjust to different angles . . . support any patient's arm from shoulder to wrist in secure, straight position. Prevents back-bending elbow and subsequent flattening of vein. Draw blood from either arm.

Ordering Information: Contoured fiberglass chair with modified "A" frame design to assure stability. Drawer under each arm rest for storage of essential blood-drawing supplies. 95Lx59cmW. Seat H, 45cm. Drawers, 29Lx20Wx13cmH. Arm rests are 70cmW . . . back edges can be raised to 84cmH. Distance between arm rests 51cm.

91-295.....245.00

91-295

Ceramic Ring Slide

With 12 raised red ceramic rings permanently fused on double-thick glass. Rings withstand repeated washing in detergent. Frosted area. Size: 3x2¹/₁₆" (76.2x52.3mm); 2.3mm thick. Rings ID, 14mm.

12-568-30.....Ea/1.45

Pk of 12/15.60

(Clay Adams 5416)

Shielded Bulb

With magnifying mirror

For agglutination tube viewing. Tube and contents are illuminated from above by shielded bulb and viewed from below by magnifying mirror. Bulb and shield are attached to base by gooseneck. Mirror is attached by double universal ball joint. Magnification varies from 1½ to 2 depending on individual adjustment.

Ordering Information: Finished in gray hammertone enamel. 115V 60Hz.

15-345-100.....50.15

Laboratory Trays

Hold slides, pipets, specimens, glassware

15-253

Stanley Tray

Made of cadmium-plated steel wire

With 3 removable insets. Bottle rack holds six 30ml solution bottles and measures 25Lx3.8cmW. Basket holds 12 diluting pipets horizontally; 8 pairs of smear slides back to back vertically, and measures 18Lx15cmW. Tube rack holds 21 test tubes to 20mm OD and measures 17Lx7.6cmW. Space at side for supplies. Tray: 36Lx26Wx5cmH. With three 30ml wide mouth bottles and three 30ml dropping bottles.

15-25323.80

14-810-76

Hematology Trays

In 3 sizes

Acrylic pickup trays provide space for all hematology items. Includes removable test tubes and microscope slide holders plus utility space for requisitions, extra tubes, syringes, needles, and miscellaneous items. Without handles.

Yankee® Polystyrene Tray

With specimen rack

Light green polystyrene base tray with 15-253-15 removable specimen rack and aluminum handle. Base tray can be loaded with specimen racks. Has compartments for syringes, needles, blood lancets, diluting fluids, alcohol sponges, tourniquets, pencils. Lightweight, durable. Easy to clean. Resistant to most lab solutions. 34Lx28Wx5.7cmH.

15-253-1035.75
(Clay Adams 1700)

Specimen Rack for 15-253-10 Trays

Capac of 16 test tubes, 8 pairs of micro slides, 8 blood diluting pipets, 8 pairs hematocrit capillary tubes. Stat calls or small collections. 18Lx18Wx5cmH.

15-253-15Ea/14.45
(Clay Adams 1704) Lot of 5, ea/13.65

15-252

Blood Collection Tray

With removable partitions

You can design and redesign this polypropylene tray to suit your needs. Just move sectioned walls . . . even remove handle, if desired. Autoclavable at 121°C. With two tube supports each holding forty 16mm tubes, one 18-slide holder, one large requisition section, and partitions for needles, syringes, etc. 36Lx29Wx5cmH.

15-25232.00

Holders and Racks

For test tubes, slides, bottles, cups, vials

14-810-67

Auto Analysis Sample Cup Holders

Provide space-saving storage for hundreds of sample cups in less than a square foot of space. Stack conveniently. Solid cover available to protect top holder. Up to six holders can be stacked under one solid cover.

Holders

Microlance® Disposable Blood Lancets

Provide immediate flow of blood for sample

Sterile disposable blood lancets produce half-round gape incision that delay clotting and premature wound closure.

Gentle pressure provides adequate sample with minimum tissue fluid dilution. Point angle and special-side flanges automatically control penetration depth.

Available with regular or long point. Long-point, heavy-duty lancet designed for puncture of newborns' heels, is useful whenever capillary blood source is heavily calloused.

Individual lancets, hermetically sealed in pre-formed aluminum well, are provided in strips of 5 for convenient dispensing. Peel-apart package is easy to open.

Vacutainer® Brand System

For fast, accurate blood specimen collection

- Eliminates preparation of anticoagulants
- No reprocessing of container
- Minimizes hemolysis in specimens
- Assures accurate blood-to-additive ratio

System consists of: 1) Vacutainer® tube and 2) reusable holder and disposable needle (or disposable holder with needle).

A Vacutainer tube is an evacuated test tube with rubber stopper for taking blood specimens to perform serological, hematological, and chemical tests. Made to handle like a syringe; multiple samples can be taken with one venipuncture.

The tube is inserted into holder with needle until soft rubber stopper of tube meets line on holder. This embeds needle's rear point in rubber stopper. Complete stopper puncture is made after tissue entry by pressing on bottom end of tube. Blood flows through sterile needle immediately upon vein entry. Stoppers are color-coded. Simple to remove.

Vacutainer tubes are available in standard volume, prelabeled standard volume, and small volume sizes. Come in a variety of types for a variety of purposes (prothrombin studies, blood lead determinations, serological studies, cell preservation work, etc.).

Vacutainer® Brand Holders

For Standard Volume Tubes

Reusable plastic holder without needle. For 5 through 20ml tubes. Cleaned with water or any cold germicidal solution. Holder makes complete blood collection assembly when combined with any needle listed on next page and Vacutainer tube.

2-665-110Pk of 10/.90
(B-D 4893)

Sterile, disposable holder with 20-gauge needle. Same as 2-665-110 but sterile with multiple 20-gauge, 38mm needle. Needle is removable so holder can be reused with other needles.

2-665-67Case of 500/65.70
(B-D 4889)

Vacutainer Adapter. Adapts 2-665-110 Vacutainer holder for use with other luer-slip reusable or disposable needles.

Case of 1000/80.00
(B-D 4892)

Vacutainer® Brand Stopper Remover

2-665-29

Safely separates stoppers from blood specimen tubes. Reduce risk of contamination through spilled blood or contact with infectious aerosols. Just grip handle of remover. Fit device firmly over stopper and squeeze. Lift up and away. To release stopper from remover, just relax your grip. For 13 and 16mm Vacutainer tubes. Lightweight. Autoclavable. Washable.

2-665-29Ea/3.15
Case of 10/29.50

To complete your Vacutainer Brand System, see next several pages for listings describing Vacutainer needles, standard volume Vacutainer tubes, and small volume Vacutainer tubes.

Vacutainer® Brand Single Sample Needles

For use with 2-665-110 or small volume holders. Needles with 21 gauge have thin walls. All with exceptionally sharp points. Color-coded to indicate gauge. Each needle in plainly marked, peel-apart package. (B-D 5741-46)

Gauge	L	Cat. No.	Case of 1000
22	25mm	2-665-16	73.87
22	38	2-665-17	73.87
21	25	2-665-18	73.87

20	25	2-665-115B	73.87
20	38	2-665-115A	73.87

Vacutainer® Brand Multiple Sample Needles

For taking multiple specimens from a venipuncture with minimal blood loss or leakage. Use 2-665-110 and small volume holders.

Shut-off valve opens automatically with forward push of Vacutainer tube; closes automatically when filled tube is removed.

With sharp stopper point and silicone treated outer cannula. Latex rubber sleeve occluding on stopper point.

Needles with 21 gauge have thin walls. Permit easier skin penetration, smoother vein entry, and minimal patient discomfort.

Sterile lot control numbers are marked on each color-coded package. Each needle in hardpack package, consisting of plastic needle shields with center no-roll hub. Hardpack carton ideal for discarding used needles. 100 needles per Hardpack carton; 10 cartons and 5 holders per case. (B-D 7220-7225)

Vacutainer® Brand Culture Tubes

Cut risk of contamination

Evacuated, sterile-stoppered tubes pre-filled with 45ml of culture media. Choice of supplemented peptone broth, Columbia broth, Trypticase® soy broth, or Thioglycollate medium. Provides closed blood culture system for aerobic and anaerobic growth.

Attach multiple sample holder/needle combination and perform venipuncture. Draw 5ml

blood sample directly into culture medium. (5ml sample ensures 1:10 dilution ratio for culturing.)

Available with plugged venting units (A on illustration) for anaerobic incubation or unplugged venting units (B on illustration) for aerobic incubation.

Vacutainer Brand Culture Tubes. With venting units.

Vacutainer® Brand Serum Separation Tube™

Separates serum from cells quickly

Evacuated blood collection tube with self-contained serum separator.

Provides better serum samples than existing techniques. Makes procedure easier. Eliminates intermediary transfers. Saves valuable technologist time.

Each tube contains an inert silicone material with density between serum and blood cells. After blood clots and during subsequent centrifuging, silicone moves upward to seek serum-clot interface. Silicone then attaches itself to tube walls to form physical barrier that separates serum from clot. Serum can then be decanted directly into analyzer cup. Or safely refrigerated in tube for up to 48 hr.

Stable at room temperature. Use before expiration date on carton and case.

Chill Block™ Storage Containers

Transport specimens at 2°C

For rapid chilling and transport of clinical specimens in procedures such as blood gas, pH, blood ammonia, insulin levels, coagulation panels. Eliminate cups, trays, Emiss basins with variable temperatures. Specimen temperature descends to 4° to 6°C in 5 to 10 minutes. Temperature stabilizes at 2°C. Remains there for up to 4 hours. Copper sleeve exchanges specimen heat with cold chemicals surrounding sleeve. Blocks store in freezer to be ready to use. Require no upkeep. Reusable. Three models for holding variety of containers.

14-375-151

5-538-55

Specimen Collection Tubes

Polypropylene, 50ml capacity, conical bottoms

With red screw cap. Disposable, conical 50ml tube, 30x115mm. Graduated at 2.5, 5, 7.5, 10, and every 5ml thereafter. Red polyethylene screw cap.

14-432-27Case of 500/96.80
(Falcon® 2074)

Fits all standard centrifuge heads. Sterile disposable 50ml tube of chemically resistant, autoclavable polypropylene. Graduated from 2.5 to 50ml at 2.5, 5, 7.5, 10, and every 5ml thereafter. With screw cap.

14-432-10Case of 500/94.58
(Kimble 58330)

Free-standing. 50ml graduated tube with white plastic-cap. Conical tube is recessed into flat-bottom barrel. Stands without support. Sealed inside sterile plastic bags of 25. Cardboard rack included in each case.

14-375-150Case of 500/87.00

Snap-on funnel. For 14-375-150 tubes. Facilitate pouring. Inert plastic.

14-375-149Case of 500/33.33

Free-standing, with funnel. Same as 14-375-150 tubes but with 14-375-149 snap-on funnels. One tube, cap, and funnel sealed in individual sterile bag. Cardboard rack included in each case.

14-375-151Case of 100/65.00

Sterile or non-sterile; with or without caps. For general lab centrifuging, specimen collecting, and transporting. Opaque, resilient polypropylene. Accurately graduated. Tested for speed tolerance and accuracy. Available in 2 styles: non-sterile without cap and sterile with cap. In styrofoam trays of 25 tubes. (Corning 25320 and 25330)

Type	Cat. No.	Case of 500
Non-sterile, w/o cap	5-538-54	46.92
Sterile, with cap	5-538-55	93.14

Specimen Collection Containers

Multi-purpose, disposable

14-375-127 14-375-128

210ml Container with Pouring Lip

Clear polystyrene. Top-to-bottom channel for QNS (quantity not sufficient) specimen and strip tests. For urine, sputum, or as a measuring cup. 210ml (7oz) capacity graduated in ml and oz. Internal lugs for stacking. Convenient sleeve pack of 25 provides for small quantity dispensing. For lids, see 14-375-128. Fisher. **14-375-127**.....Case of 500/24.60

Cardboard Lid. For 14-375-127. Imprinted for patient collection information.

14-375-128.....Box of 500/3.63
Case of 10 boxes/36.30

14-375-129

Autoclavable 118ml (4oz) Container and Lid

Translucent polypropylene container with opaque polypropylene lid. Graduated in ml and oz. For single use, collection, transport, and storage of lab specimens. Individually wrapped and sterilized in polyethylene bags. Fisher.

14-375-129.....Case of 100/24.30

2-540-10

Double-Purpose Polypropylene Containers

Use as beaker by applying pressure to rim to form pouring lip . . . or use as specimen collection vessel for specimens. Graduated to 250ml and 8oz. Sterile, ready-to-use. Tested for sterility, accuracy, and leakage. In unit packs of one per sleeve with lid or 20 per sleeve without lids for high-volume clinical use. (Corning 25400 and 25410)

Unit Pack	Cat. No.	Case of
1/sleeve with lid	2-540-10	100/21.10
20/sleeve w/o lids	2-540-11	500/32.50

Lids. For 2-540-11 containers. Sterile, rigid polyethylene.

2-540-12.....Case of 500/15.05
(Corning 25420)

Clear Polypropylene Containers With oz and ml Graduations

Molded. Autoclavable cups. Chemically resistant to commonly used lab reagents at room temp. For collection, transportation, and storage of specimens. Nonautoclavable polyethylene lids. Individually wrapped. Sterile. (Falcon® 4013 and 4015)

Capac	Graduated to	Cat. No.	Case of 100
4½ oz (133ml)	4 oz/110ml	11-838-16	20.85
8 (237)	8/220	11-838-21	23.21

Without lids. Same as 11-838-16 and 11-838-21 containers but without polyethylene lids. In bags of 20. Sterile. (Falcon 4014 and 4020)

Capac	Cat. No.	Case of 500
4½ oz (133ml)	11-838-15	22.66
8 (237)	11-838-20	35.75

Lids only. Polyethylene. Sterile. Cannot be autoclaved.
11-838-24.....Case of 500/16.56
(Falcon 4017)

Clinic-White Containers

Disposable containers for specimen or fluid collection and storage. Notations can be made on side or lid. Tight-fitting lids for secure transport and semi-permanent storage. 118ml size is clear polypropylene; 237, 473, and 946ml are polystyrene; 2.5 and 5.1 liter sizes are polyethylene. (Lab-Tek 4719-29)

Capac	HxO.D.	Cat. No.	Case of

14-375-135

Tri-Cornered Container

Bea-Kup™ containers are multi-purpose, crystal-clear plastic. Graduated to 7oz and 210ml. Tolerate aqueous solutions (acid or base) up to 3N. Withstand temperatures to 45°C. Biologically inert; easily incinerated. With tight-fitting plastic-coated lids.

14-375-135.....Box of 100/5.85

Emergency Care For Lab Burns

When an accident happens, turn to this handy Emergency Burn Relief Station for fast relief. Station holds two 177ml (6 oz) cans of Americaine Burn Relief Spray. Safe, fast, temporary comfort from pain of minor burns. The 43x28cm backboard screws securely to wall. **Cat. No. 10-030**, just \$15.50. Americaine Spray refill is **Cat. No. 10-030-5**; \$17.85 for case of six 177ml (6 oz) cans.

Flo-Thru Total Solids Meter

13-946-105

Determines protein concentration and specific gravity

Complete system (13-946-105), consisting of the Total Solids Meter, Table Stand, and Flo-Thru Prism Cover and Pump, analyzes small samples from 0.02ml to 0.005ml of serum, plasma, or urine easily and accurately.

Just apply drop of urine to prism face. Close cover. Take reading through eyepiece for specific gravity from 1.000 to 1.035, protein concentration from 0% to 15% range, and refraction from 0-320 range. Tables are provided for converting readings to other related values for plasma, serum, urine.

Total Solids Meter (13-946-100) with no moving parts. Provides automatic temperature compensation for all aqueous solutions. No time needed for temperature equilibrium; analysis can be made immediately. With vinyl case.

Table Stand (13-946-102) holds 13-946-100 meter securely while providing direct source of illumination. With tilting device and drip pan. 110V 60Hz. UL listed.

Flo-Thru Prism Cover and Pump (13-946-106) provides rapid, efficient, successive screenings of urine specimens where lab is not sample-limited. Used with 13-946-100 meter and 13-946-102 table stand.

13-946-100

Arrange specimens in test tube rack. Place flexible intake tubing into test tube. Depress pump bar to draw 1.5ml of sample. Depress pump bar again, to move enough specimen so that contrast line can be read on reticle scale. Move tubing to next sample tube. Depress pump bar twice again for next reading and for flushing preceding specimen through waste tube.

Where sample is limited, disposable hypodermic needle replaces tubing. Specimen brought to needle, tip immersed, and pump operated to draw adequate sample.

Refractometer/Dispenser

**Collects urine, measures specific gravity, dispenses . . .
all in 7 seconds**

Urine refractometer and dispenser combination collects accurate volumes of urine . . . optically measures specific gravity . . . then dispenses sample for further testing.

Fast operation. Squeeze trigger to pick up 2.0 to 5.0ml of urine through Teflon® tube. Release trigger. Read specific gravity from refractometer. Press trigger again to dispense sample volume into centrifuge tube.

Ordering Information: Lightweight gun-shaped instrument. Corrosion-resistant, leakproof fluid system. Flow-through cell with battery-operated light source. Complete with

refractometer, recharging base for charging batteries, and Teflon® extension tube: 15Lx15Wx24cmH. 115V 50/60Hz.

13-946-115487.00
(Hamilton 75000)

Dispenser Only. In case you already have a refractometer (American Optical 10400 Total Solids Meter), you can buy refractometer dispenser without refractometer.

13-946-117195.00
(Hamilton 75002)

Urinometers

For rapid determinations of specific gravity of urine

11-384-5

One-Piece Urinometer

Designed on principle of regular storage battery hydrometer. Draw sample up into float chamber by squeezing bulb. When hydrometer floats in vertical position, take reading from scale graduated from 1.000 to 1.060 in 0.001 divisions. Hydrometer with glass suction tube. Over-all L, 36cm. Long enough to read bottom of 4oz (118ml) sample bottle

11-384-58.15

11-384-15

Two-Piece Urinometer

Calibrated at 60°F (15.6°C). Squibb 13cm urinometer with specific gravity scale from 1.000 to 1.060. With heavy molded glass cylinder.

11-384-158.15

11-384-25

Midget Urinometer

This urinometer consists of a graduated hydrometer with range from 1.000 to 1.040. Solid shot-weighted float. With molded 13cm glass cylinder with extra-wide base.

11-384-254.25
(Clay Adams 1525)

Thermometer. For use with the above urinometers. 0-40°C in ½° div. L. 11cm.

10-794-127.50

Concentrated Stain

For urinary sediment

Sedi-Stain™, highly selective formula that stains blood cells, casts, and other formed elements in urine sediment to permit rapid and accurate identification. Only small amount needed, avoiding danger of excessive dilution. No mixing; no filtration. Used directly from dropper bottle. Remains stable indefinitely. For 1500 tests. 60ml bottle with dropper.

2-659Ea/14.80
Case of 10/125.00
(Clay Adams 1571)

2-659

For urine specimen collection systems, see pp 659-660.

Albuminometer

Determines albumin in urine

Albuminometer (KIMAX® brand) for testing urine according to Esbach or Pfeiffer method. Graduated tube calibrated for quantities of urine (designated on tube with U) and reagent (designated on tube with R) to be added. Amount of albumin present in urine in parts per thousand can be read directly using the Esbach method.

Ordering Information: Wooden base. With rubber stopper and case.

11-385Pk of 1/8.75
Case of 6/47.28
(Kimble 48005)

Bovine Albumin-Based Control

Rangecheck®, for monitoring upper limits of linear response of non-enzyme chemistries. Values of constituents are approximately 80% of linear range of each chemistry. Assures proper operational performance.

Constituents include glucose (400mg/dl), urea nitrogen (60mg/dl), total protein (7.0g/dl), calcium (14.0mg/dl), phosphorus (9.5mg/dl), uric acid (10.0mg/dl), albumin (7.0mg/dl), sodium (155mEq/liter), potassium (6mEq/liter), chloride (120mEq/liter), bilirubin (10mg/dl), creatinine (6mg/dl), and iron (300mg/dl). Eighteen 5ml vials.

MC200345.00

Chemistry Control Serum

Qualify® I and Qualify® II are chemistry control material prepared from human blood base and lyophilized to assure maximum stability of the constituents. When reconstituted, both can be used to evaluate reproducibility and accuracy of chemistry methodologies. Both contain values for the following: total bilirubin, glucose, BUN, total protein, albumin, calcium, phosphorus, uric acid, creatinine, alkaline phosphatase, acid phosphatase, LDH, SGOT, SGPT, CPK, cholesterol, chloride, iron, and UIBC.

Control	Range	Quantity	Cat. No.	Box
Qualify I	Normal	6x10ml	MC2009	29.50
Qualify II	Abnormal	6x10	MC2010	29.50

American Monitor Reagents for Manual and Automated Serum Chemistries

Albumin

Manual, automated

Albumin binds to the dye 3, 3', 5, 5'-Tetrabromo-m-cresolphthalein specifically and quantitatively, producing an intense blue chromophore measured at 600nm. The chromophore is stable for at least 1 hr. Requires only 20 μ l serum. Complete in 2 min plus pipetting time.

Reagent Sets for Manual Determinations

Include albumin dye and lyophilized 5g/dl albumin standard.

Quantity	Cat. No.	Box
50-test	MC1006	14.00
185-	MC1007	21.00

Reagent for Automatic Determinations

Buffered Albumin Dye. 960ml.
MC100521.00

Azurechrome® Acid Phosphatase Manual

Substrate sodium thymolphthalein monophosphate eliminates false positive elevations. Reaction measured at pH 6.0 with a citrate buffer. The enzyme hydrolyzes the substrate and yields chromogenic thymolphthalein proportional to the enzyme activity. The chromophore is quantitated photometrically at 590nm. Simple procedure involves only addition of serum and two reagents to test and serum blank.

Reagent Sets

Include reagents and standard.

Quantity	Cat. No.	Box
25-test	MC1019	12.50
50-	MC1030	19.50

Azurechrome® Alkaline Phosphatase Manual

Reaction measured at pH 10.2 with a diethanolamine buffer. The enzyme hydrolyzes the substrate (sodium thymolphthalein monophosphate) and yields chromogenic thymolphthalein proportional to the enzyme

activity. The chromophore is quantitated photometrically at 590nm. Free of hemoglobin and bilirubin interference. Requires only 50 μ l serum. Complete in less than 16 min.

Reagent Set

Includes reagents and standard for 200 tests.
MC101825.00

"525" Bilirubin (Total and Direct)

Manual

Ideal for laboratories with low-volume bilirubin assays. In the direct reaction, bilirubin glucuronides react with p-benzenediazonium sulfonate directly under acid conditions and develop a red azobilirubin color for spectrophotometric measurement. For the total reaction, all bilirubin, both conjugated and unconjugated, is reacted to form azobilirubin. The aqueous catalyst produces immediate coupling, eliminates variation in reaction time.

Reagent Set

Includes all reagents for 60 total and 60 direct bilirubins. For macro or micro use.
MC5250Box/19.50

Sodium Nitrite	60	MC9004	2.00

Jendrassik Bilirubin (Total and Direct)

Manual, automated

Bilirubin glucuronides (direct bilirubin) reacts with azosulfanilic acid (diazo reagent) in an acid medium to prevent the reaction of unconjugated bilirubin. The acid red azobilirubin color developed is stabilized with hydroxylamine and shifted to a blue chromophore with the addition of an alkaline reagent. The reaction for total bilirubin is catalyzed and buffered by a caffeine solution. The red azobilirubin chromophore is stabilized and shifted to a blue chromophore with the addition of an alkaline reagent. The blue chromophore in both reactions is measured photometrically at 600nm and is stable for at

least 30 min. Requires only 2 min plus pipetting time. Standardized with MC9000-SD, MC3077, or MC3078 standards.

Reagent Set for Manual Determinations

Includes reagents for 100 direct and 100 total bilirubins. For macro or micro.

Stabilizer	240	MC9006	4.50

HPE® Calcium Manual

HPE forms a colored complex with calcium at pH 12.0. Under the conditions of the reaction, magnesium will not give a colored reaction with the dye. Polyvinylpyrrolidone catalyzes the complexing of phosphate by molybdate, thus eliminating occasional low results caused by the formation of a phosphate-calcium complex.

Reagent Sets

Include reagents and standards. MC1011 also has 50 plastic reaction tubes. MC1012 has 100 tubes.

Quantity	Cat. No.	Box
50-test	MC1011	18.00
100-	MC1012	29.00

American Monitor Reagents, Contd.

60 Second® Calcium

Manual

Calcium, in an alkaline medium, reacts with o-cresolphthalein complexone forming an intensely colored chromophore absorbing at 575nm. Magnesium and iron are excluded from the reaction by complexing with 8-hydroxyquinoline. The original method of Baginski *et al*, has been modified by the additions of surfactants and a solvent system which minimizes interference from lipemia.

Reagent Sets

Include reagent and 10mg/dl calcium standard. MC1031 also has 50 plastic reaction tubes.

Quantity	Cat. No.	Box
50-test	MC1031	12.50
120-	MC1032	16.00

Chloride

Manual

Offers a good sensitivity with a change of 1% T equal to 1 mEq/liter. A single test takes 12 min and a "batch", only the additional time required for pipetting and readings. Use serum or plasma. No filtrate required. Colorimetric end point stable for 30 min.

Reagent Sets

Include reagents and 3 chloride standards (80, 100, and 120mEq/liter).

Quantity	Cat. No.	Box
60-test	MC1001	14.00
120-	MC1002	22.00

Cholesterol (Enzymatic)

Manual

Free and esterified cholesterol enzymatically produce hydrogen peroxide, which in turn is measured colorimetrically using an improved condensation reaction. Better sensitivity than previous phenol methods. Less interference from hemoglobin, lipemia, and icterus.

Reagents for Cholesterol (Enzymatic)

Quantity	Cat. No.	Price
50-test	MC1680	22.50
200-	MC1681	60.00

Cholesterol

Manual

Direct serum reagent system. Agrees with the reference Abel method. Unique reagent Cholesteright® provides specificity by blanking non-cholesterol interference substances.

Reagent Set

Includes reagents and 200mg/dl standard for 150 tests.

MC102515.00

Individual Reagents

Description	Size	Cat. No.	Price
Cholesteright Reagent	960ml	MC1037	16.50
Cholesterol Color Reagent	1 gal (3.8 liters)	MC1038	31.00

Diaphorase CPK

Manual

Single tube, direct serum colorimetric procedure. An improvement of the classic Oliver-Rosalki methods. NADH formed in reaction is enzymatically catalyzed to reduce the chromogen 2-p-iodophenyl-3-p-nitrophenyl tetrazolium chloride (INT). The chromophore produced is the familiar formazan chromophore quantitated photometrically at 500nm.

Measure reaction as an end point procedure or spectrophotometrically as a kinetic rate reaction.

Reagent Set

Includes 50 individual-test Microvials® of substrate, chromogen, and standard.

MC103448.00

Glucose (Hexokinase Method)

Manual

Five-minute, single reagent, hexokinase method. Requires no serum blank. Free from interference from hemoglobin, lipemia, and icterus. Final chromophore read at 610nm and stable for 30 min.

Reagents for Glucose (Hexokinase)

Quantity	Cat. No.	Price
100-test	MC1625	12.00
300-	MC1626	24.00

Trucose® Brand Glucose

Manual, automated

A unique ortho-toluidine reagent system without glacial acetic acid. Combines o-toluidine, b-hydroxytricarballic acid in an ethandiol solution with a stabilizer. A non-ionic, surface active agent suppresses turbidity from lipemic sera.

Trucose Reagent for Manual Determinations

Size	Cat. No.	Price
1 gal (3.8 liters)	MC1052	40.00
5 (19 liters)	MC1053	90.00

Phosphorus End Point CPK

Manual

Creatine phosphokinase (CPK) catalyzes the transfer of a phosphate group from ATP to creatine. The creatine phosphate thus formed is subsequently hydrolyzed yielding inorganic phosphorus. The activity of CPK is maintained by the sulphydryl activator glutathione.

The phosphorus released is measured by the Monitor phosphorus reaction. The reduced phosphomolybdate-blue color complex developed is proportional to the CPK activity.

NOTE: Also requires Monitor Catalyzed Phosphorus Reagent System (MC6500), or each of the individual reagents (MC7501, MC7502, MC7503).

Reagent Sets

Quantity	Cat. No.	Box
50-test	MC6510-50	32.00
100-	MC6510-1C	42.00

Serum Iron/Total Iron Binding Capacity

Manual

Direct on serum. Requires only 2.0ml of serum for both serum iron and TIBC. Highly specific and sensitive magnesium bathophenanthroline sulfonate reacts with ferrous iron to form a red color complex measured at 535nm. Eliminates positive errors due to ferrous iron.

Reagent Set

Includes reagents and 200mcg/dl working iron standard for 60 total iron and TIBC's.

MC535021.00

Individual Reagents

Absorbent Capsule	120-	MC5358	15.50

Catalyzed Phosphorus

Manual, automated

Specific for inorganic phosphorus. Single determination takes just 8 min. Direct on serum or urine. No filtrate required. Reaction follows Beer's Law. Linear on most instruments to 10 or more mg/dl.

Molybdate is catalyzed to its reactive polymer state and reacts immediately with phosphorus to form an intermediate yellow phospho-molybdate complex. This solution is alkalinized, activating the reduction of the intermediate complex to the familiar blue reduced phospho-molybdate chromophore measured at 650nm.

System also used for end point determination of inorganic phosphorus in Monitor's phosphorus end point CPK (MC6510-50 and MC6510-1C).

Reagent Set

Includes reagents for 50 determinations.

MC6500Box/14.50

Individual Reagents

Description	Quantity	Cat. No.	Price
Molybdate Reagent	500-test	MC7501	7.50
Reductant-Catalyst	500-	MC7502	19.50
Buffer Reagent	500-	MC7503	4.50

Diaphorase LDH

Manual

A single tube, direct serum, colorimetric procedure. Easier and more specific than LDH-INT reduction reaction. Can be performed by simple end-point method. Ideal for routine "batch" testing, or by kinetic reaction monitoring for research.

Reagent Set

Includes 100 individual substrate Microvials®, chromogen, and standard.

MC102052.00

Serum Iron/Unbound Iron Binding Capacity

Manual

In the measurement of iron, ferric iron is dissociated from its carrier protein transferrin, an acid medium; reduced to the ferrous form; and reacted with a sulfonated triazine compound to form an intensely colored blue chromophore. The absorption peak for the developed chromophore occurs at 610nm. Quantitation at this wavelength minimizes interference from endogenous serum chromogens by decreasing the contribution of bilirubin and carotenoids to the measured absorbance. Routine use of a modified serum blank procedure eliminates problems commonly encountered with lipemic or turbid specimens.

To quantitate unsaturated iron binding capacity, excess ferrous iron is added to serum in an alkaline buffer, pH 8.3, to facilitate saturation of unbound sites in the transferrin molecule. The remaining iron is quantitated with the sulfonated triazine compound, the absorbed iron being the measure of unbound transferrin in the sample. Calculate total iron binding capacity by adding the results of the iron assay to the value obtained for unsaturated iron binding capacity.

Requires only 1ml serum. Reaction time for serum iron only 5 min. UIBC completed in 20 min.

Reagent Set

Includes reagents for 50 irons and 50 UIBC's plus a 200mcg/dl and 600 mcg/dl working standards and 100 plastic reaction tubes in reusable rack.

MC161053.00

Total Protein

Manual, automated

Biuret reagent stabilized by sodium citrate. Highly alkaline pH required for the reaction obtained by adding a separate reagent. Hence, the Biuret reagent is stable indefinitely, even at room temperature.

Reagent Set for Manual Determinations

Includes stable Biuret reagent and alkaline reagent for 150 tests.

MC1003Box/10.00

Individual Reagents for Automated Determinations

Description	Size	Cat. No.	Price
Biuret Reagent	960ml	MC1004	6.00
0.75N Sodium Hydroxide/Sodium Potassium Tartrate	1000	MC1101	5.00

Triglyceride (Enzymatic)

Manual

Serum triglycerides hydrolyzed enzymatically to form glycerol, then NADH, then an intense blue chromophore. Single incubation. Linear to at least 500mg/dl.

Reagents for Triglyceride

Quantity	Cat. No.	Price
50-test	MC1620	35.00

Uricase Uric Acid

Manual
Phosphotungstate reacts with uric acid to form a blue chromophore. A blank is performed in which uric acid is destroyed by the action of uricase.
Substances such as glucose, ascorbic acid, glutathione, caffeine, salicylates (gentisic acid) and others which might otherwise interfere, contribute equally to test and blank, thus their effect is eliminated. Use serum directly. No filtrate required.

Reagent Sets

Include phosphotungstate reagent, carbonate reagent, 15mg/dl standard, standard diluent, uricase, and buffer.

Quantity	Cat. No.	Box
25-test	MC1016	14.00

Analytab (API) Systems

Simple, rapid identification of enterics, anaerobes, and clinical yeasts

Ready-to-use microtube systems for standard identification tests of enteric organisms, anaerobic organisms, and clinical yeasts. Single colony inoculum prevents error due to presence of other organisms.

API Systems consist of strips of microtubes containing dehydrated substrates for a series of biochemical tests necessary to identify the organisms. Adding a pure suspension of inoculum to microtubes reconstitutes the substrates. Strips, placed on plastic trays, are then incubated. Clear-cut, easy-to-read reactions.

API 20E

Gram Negative Rod Identification System

For rapid and accurate species/subspecies identification of Enterobacteriaceae in 18 to 24 hours. Group/species identification of many non-fermenters in 24 to 48 hours. Conventional tests are reduced to microscale. Media and technique standardized to provide rapid, reliable, reproducible results. API 20E consists of 20 microtubes containing the following substrates: ONPG, arginine, lysine, ornithine, citrate, H₂S, urease, tryptophane, indole, acetoin (VP), gelatin, glucose, mannitol, inositol, sorbitol, rhamnose, sucrose, melibiose, amygdalin, and arabinose. Instructions provided for performing oxidase and catalase tests.

Shelf life: 1 year from date of manufacture when stored at 2° to 8°C. No risk of contamination when

strips are autoclaved or incinerated.

Ordering Information: Package includes 25 API 20E strips, 27 incubation trays and lids, 25 report sheets, instruction manual, and differential chart.

AP2010Box/54.38

API 10 Screen System

Same as API 20E system but for routine screening to identify enteric organisms by following 10 biochemical tests: arabinose, citrate, glucose, H₂S, indole, lysine, ONPG, ornithine, tryptophane, urease. Strips and trays supplied for 50 determinations. Order reagents separately.

AP1010Box/75.00

API Supplementary Tests

API OF Test

Supplementary test used for differentiation of fermentative from oxidative metabolism of glucose by various gram-negative bacteria. Designed for use in conjunction with API 20E to assist in identification of non-Enterobacteriaceae gram-negative bacteria. Package contains 50 ampules.

AP500117.50

API M Test

Supplementary test for differentiation of motile from non-motile gram-negative bacteria. Designed for use in conjunction with API 20E to assist in identification of non-Enterobacteriaceae gram-negative bacteria. Package contains 50 ampules.

AP500217.50

Analytab Systems, Contd.

API 20 Anaerobe System

21 tests for anaerobic organisms

A ready-to-use system for identifying *Clostridium*, *Propionibacterium*, *Bacteroides*, and *Fusobacterium* within 24 to 48 hours. Accurate to 93%.

Media included for 21 anaerobe identification tests: indole, urease, 16 carbohydrates, gelatin, esculin, and catalase. Inoculate micro tubes aerobically, then incubate them anaerobically.

Ordering Information: For 25 determinations of each 21 tests. With 25 microtube strips (each strip for 21 tests), 25 incubation trays and covers, 26 vials of suspension media, 25 report sheets, instruction manual, and differential chart.

Xylene	15	AP4100	1.75
For carbohydrates:			
Bromocresol Purple, 0.02%	30	AP4090	1.75

Accessory for API 20

Anaerobe Jar Converter System. For incubating test strips with anaerobic jar system. Holds up to 6 test strips. Includes test strip holder and jar support. Without anaerobic jar.

AP2043.....27.00

API 20 Clinical Yeast System

20 tests for clinical yeasts

For identifying *Candida*, *Cryptococcus*, *Torulopsis*, *Trichosporon*, *Rhodotorula*, and *Saccharomyces* in 24 to 72 hr.

Includes 20 standard biochemical tests for fermentation and assimilation. Fermentation tests are: glucose, galactose, maltose, saccharose, lactose, raffinose, trehalose, melibiose, and a control. Assimilation tests: inositol, glucose, galactose, maltose, saccharose, lactose, raffinose, trehalose, melibiose, cellobiose, and actidione.

Ordering Information: For 25 determinations of each series of 20 tests. With 25 strips of microtubes (each strip with substrate for 20 tests), 26 ampules of suspension medium, 25 incubation trays and covers, 25 report sheets, instruction manual, and differential chart

AP2020.....Box/75.00

Profile Recognition System — Computer Service

Computerized service allows simultaneous interpretation of up to 24 biochemical tests performed with API 20E and supplementary tests for identification of fermenters, oxidizers, and non-oxidizers.

System components consist of: Analytical Profile Index — current listing of over 3000 biotypes showing three highest biochemical probabilities for each biotype as well as additional information required for final identification. Quick Index — biotypes encountered most frequently in clinical situation. API Coder — establishes organism profiles by converting reactions of 21 biochemical tests into 7-digit number.

What's more, you enjoy unlimited free use of API's computer via toll-free number for profiles not listed in Index. And use of API's reference culture center for strains requiring additional biochemical testing.

API data base is comprised of 48 species or subspecies of *Enterobacteriaceae* and 30 groups or species of other gram-negative bacteria. Data has been derived exclusively from results obtained on API 20E, API motility

GI medium, and API of glucose medium. Over 100,000 results have been compiled and analyzed.

Service for 1 year.
AP8110.....99.00

Dial Caliper Measures Antibiotic Susceptibility Zone Sizes

Measures up to 130mm, readable to 0.1mm. Easy to use. Thumb roller for fine adjustment.

Constructed of scratch-resistant polyamid plastic. Rustproof; lightweight. Special green color provides good contrast for reading ease. In protective box.

Digoxin Control Digox-EI is dried human serum with appropriate additions to reflect in assay an elevated level of digoxin.	2x5	AS4021	10.00
Digitoxin Controls Digitox-EI is dried serum with appropriate additions to reflect in assay an elevated level of digitoxin.	2x5	AS4081	10.00
Gastrin Control Gastr-EI is dried human serum with appropriate additions to reflect in assay an elevated level of gastrin.	2x5	AS4141	10.00
Gentamicin Control Gent-EI is dried human serum with appropriate additions to reflect in assay an elevated level of gentamicin.	2x5	AS4151	10.00
Insulin Control Insul-EI is dried human serum with appropriate additions to reflect in assay an elevated level of insulin.	2x5	AS4061	10.00
Testosterone Control Testost-EI is dried human serum with appropriate additions to reflect in assay an elevated level of testosterone.	2x5	AS4121	10.00
Vitamin B12 Control Vit-EI (B12) is dried human serum with appropriate additions to reflect in assay an elevated level of vitamin B12.	2x5	AS4051	10.00
Triiodothyronine Control Thyr-EI is dried human serum with appropriate additions to reflect in assay an elevated level of triiodothyronine.	2x5	AS4131	10.00

A. R. Smith Special Chemistry Controls

Description	Quantity	Cat. No.	Pk
Triglycerides Control Tri-EI is dried human serum which will reflect in assay a significantly elevated level of triglycerides.	2x5ml	AS4011	15.00
Urine Control Urine Control is dried human urine with appropriate additions to reflect in assay values for ammonia, amylase, calcium, catecholamines, chloride, chorionic gonadotropin, copper, coproporphyrin, creatinine, delta amino levulinic acid, estriol, glucose, magnesium, metanephines, osmolality, pH, phenyl pyruvate, phosphorous, potassium, pregnandiol, pregnantriol, sodium, specific gravity, urea, uric acid, uroporphyrin, VMA, zinc, 5 HIAA, 17 hydroxy corticosteroids, ketogenic steroids, 17 keto steroids.	10x25	AS9021	62.50

A. R. Smith Atomic Absorption Controls

Description	Quantity	Cat. No.	Pk
Trace Metals Control Met-EI (S) is dried human serum with appropriate additions to reflect in assay elevated levels of the trace metals — zinc, iron, copper, nickel, manganese, chromium, selenium, cobalt, molybdenum, vanadium, strontium, sodium, potassium, calcium, magnesium.	2x5ml	AS4031	15.00
Lead Controls Normal level Tox-EI (Pb) 1 is dried human whole blood which will reflect in assay a normal level of lead.	6x5	AS4161	18.00
Elevated level Tox-EI (Pb) 2 is dried human whole blood with appropriate additions to reflect in assay a slightly elevated level of lead.	6x5	AS4111	Box/18.00
Toxic level Tox-EI (Pb) 3 is dried human whole blood with appropriate additions to reflect in assay a significantly toxic elevation of lead.	6x5	AS4171	18.00

BBL® Coagulation Reagents

B40775

B40637

B40631

B40778

B40640

B40638

B40821 FibroPlastin® II Liquid Thromboplastin Reagent

Pure liquid rabbit brain thromboplastin with calcium chloride added, as originally recommended by Quick. Ready to use. No restoration or dilution required. For prothrombin time test. May be used in other test systems which use thromboplastin as substrate.

Tests	Cat. No.	Box of 10 Vials
20	B40821	14.52
100	B40822	45.39

B40775 FibroPlastin Thromboplastin

Lyophilized pure rabbit brain thromboplastin extract with calcium chloride, as originally recommended by Quick. Stable, sensitive, accurate. Upon restoration, ready for immediate use in prothrombin time test or other coagulation tests that require thromboplastin. Store at -20° to $+8^{\circ}\text{C}$.

Tests	Cat. No.	Box of 10 Vials
20	B40775	14.52
50	B40776	32.69

B40637 Anti-Coagulant Works in 9:1 Ratio

Sodium oxalate, 0.1M, useful in coagulation studies. 9 parts of blood added to 1 part sodium oxalate to prevent clotting. Oxalated plasma can be used in coagulation determinations where plasma is indicated. 25ml/vial.

B40637.....Box of 10 vials/6.38

B40802 FibroTrol® 10-20 Abnormal Range Coagulation Control Plasmas

Prepared and standardized to approximate plasma of patients anticoagulated to levels of 10 and 20% prothrombin activity. Recommended for use as daily control to assure proper performance of reagent, equipment, and technique in therapeutic range.

Citrated or oxalated. Kits consist of five 1ml vials of control plasma, 10% range of activity, and five 1ml vials of control plasma, 20% range of activity.

FibroTrol Control	Cat. No.	Box
Citrate	B40802	14.52
Oxalate	B40805	14.52

B40631 Platelet Factor Reagent

Rabbit brain extract prepared by Bell & Alton method. Lyophilized. Source of platelet factor substitute; can be used in tests: partial thromboplastin time (PTT), thromboplastin generation time (TGT), Hicks-Pitney modification of TGT. 2.5ml/vial. Store at 2° to 8°C .

B40631...Box of 10 vials/14.52

Bovine Plasma Free of Factor II

Lyophilized, prothrombin-free, for P & P test. Factor II removed by adsorption with barium sulfate. Also can be used for same procedures as prothrombin-free rabbit plasma. 5ml. Store at -20° to $+8^{\circ}\text{C}$.

B40636.....3.81

B40778 FibroTrol® Normal Coagulation Control Plasma

FibroTrol® lyophilized normal human plasma control produces clot within 10 to 30 sec in prothrombin time test.

Quality controlled to assure performance as control for all coagulation tests. Made from pure human blood drawn from healthy donors.

Oxalated or citrated. Select FibroTrol control to match anticoagulant used for collecting blood samples. Citrated system strongly recommended for coagulation tested. Sodium citrate's ability to preserve labile coagulation factors is far superior to that of sodium oxalate. Determinations with citrated test specimens may be 1 to 2 sec shorter than those with oxalated specimens. 1ml/vial. Store at 2° to 8°C .

FibroTrol Control	Cat. No.	Box of 10 Vials
Citrate	B40777	11.45
Oxalate	B40778	11.45

B40640 Complete TGT Reagent Kit

With standardized reagents for thromboplastin generation time test: 2.5ml platelet factor reagent, 2ml adsorbed plasma reagent, 2ml serum reagent, 2x2.5ml plasma substrate reagent, 5ml calcium chloride, 0.025M; 4x100mg barium sulfate. Store at 2° to 8°C .

B40640.....14.52

B40638 Calcium Chloride in 2 Molarities

0.02M, for prothrombin time test. Unless specified, should be added in equal volumes to calcium-free reagent. Should not be added to FibroPlastin, 25ml/vial.

0.025M, for various coagulation tests; including: partial thromboplastin time (PTT), activation of TGT, and recalcification time. 25ml/vial.

Molarity	Cat. No.	Box of 10 Vials
0.02M	B40638	6.38
0.025	B40639	6.38

B40779 FibroLet® Activated Platelet Factor Reagent

Lyophilized activated platelet factor reagent (cephalin) detects bleeding disorders. A chloroform extract of brain prepared according to Bell & Alton method, activated with Celite, diatomaceous silicate. Stable for 30 days at 2° - 8°C after reconstitution.

Reliable for detecting congenital and acquired bleeding disorders, quantitative factor assays, and for monitoring heparin therapy. 1ml or 2.5ml/vial. Store at 2° - 8°C .

Capac	Cat. No.	Box of 10 Vials
1.0ml	B40779	9.74
2.5	B40780	14.52

BBL® Dehydrated Culture Media

B40779

B40823 ThromboTest Owren® Reagent

Prothrombin time reagent sensitive to depression of 4 factors reduced by oral anticoagulants. Recommended for management of anticoagulant therapy. Thoroughly standardized, lyophilized preparation of thromboplastin, modified plasma (bovine) with cephalin, and preservatives.

Either capillary or venous blood samples can be used to determine ThromboTest times. Coagulation activity reported in percentage of normal determined from correlation curves for capillary and venous blood. Curves supplied with each ampule of reagent, along with instructions. Store at 2° to 8°C.

Tests	Cat. No.	Box of 5 Vials
8	B40642	16.44
40	B40641	48.14

0.0032M Calcium Chloride

Restores ThromboTest Prothrombin Time Reagent when venous blood method is used. 3ml/vial.

B40662Box of 10 vials/3.81

BART™ Test Reagent

Stable liquid reagent for use in whole blood activated recalcification time (BART) test. Provide immediate and simple means of monitoring heparin therapy. For 25 tests.

B40823..Box of 10 vials/14.52

BBL® Prepared Culture Bottles

Reduce the possibility of contamination

Accurate, flexible, convenient culture bottle system provides sterile technique, reduces possibility of contamination, is time-saving and convenient. Sealed bottle contains ready-to-use media in CO₂ atmosphere. Used with one sterile blood taking unit (see below), bottle provides closed fluid path from vein to media. Can be used for anaerobic or aerobic cultures.

Bottles contain 50 or 100ml broth, or 25ml broth with agar surface. Media include: brain heart infusion with PABA, Columbia broth, fluid thioglycollate without CO₂, thioglycollate medium without indicator -135C, and Trypticase® Soy broth. Media carefully controlled for ability to grow organisms. Selected to show early growth from positive

specimen from minimal inoculation. Available with growth-promoting 0.03% sodium polyanethol sulfonate (SPS). Additive acts as highly effective anticoagulant, inactivates complement, inhibits phagocytosis and other antibactericidal properties of blood, reduces activity of certain antibiotics.

Description	Size	Cat. No./Pk. of 10	Cat. No.	Case of
Brain Heart Infusion with PABA and CO ₂	50ml	B21420/13.24	B21421	100/115.88

Case of 100/66.02

Epoxy-coated test tube racks can be autoclaved

Steel wire racks have a tough epoxy coating that isn't affected by organic solvents, salts, weak acids, weak alkalies. Racks have three decks (bottom deck is fine mesh) with square holes.

Tube diameter	No. of Tubes	Cat. No.	Ea	Case of 12

BBL® Prepared Media In Disposable Petri Dishes

Several types of dishes with BBL prepared culture media are available:

Falcon Optilux® Dishes

100x15mm style dishes (see 8-757-103A on page 248) plated with one medium. Packaged in expanded polystyrene foam containers. Assure moisture retention, temperature constancy, shipping protection, and optimal product performance.

I Plate® Dishes

Divided 100x15mm style dish (see 8-757-110 on page 248) plated with two media. Packaged in expanded polystyrene foam containers.

150x15mm Style Dishes

Contain Mueller Hinton Agar, with or without blood. For use in Bauer-Kirby and standardized methods of anti-microbial susceptibility testing. Packed in expanded polystyrene containers.

Rodac® Dishes

Modification of 65x15mm Falcon® dish. (See 8-757-152 on page 249.) Base has inward-sloping walls and convex bottom designed to keep agar in place during transit and use. Packaged in expanded polystyrene foam containers.

All dishes supplied 20 per package; 100 dishes per carton. Store at 2° to 8°C. Because media are perishable and special shipping is required, dishes cannot be included with other

BBL items for best price.

For large quantities, standing order plan is available. Order 5,000 or more dishes to be shipped during 12-month period, with minimum shipment of 200 dishes prepaid. Total number of dishes determines quantity price, e.g., 10,000 dish price applies to standing order of 200 dishes per week for 52 weeks.

Any formulation not shown will be made on special order for minimum of 200 dishes.

Fisher
Dry-Bath Keeps
Temperature
Constant

Fisher Model 145 accommodates up to 4 of 8 different heating blocks holding tubes from 6 to 25mm dia. Aluminum blocks conduct heat evenly. Keep temperature constant. Because tubes stay completely dry, Dry-Bath minimizes clean-up problems.

Temperature control dial graduated from 25° to 125°C. The temperature you select stays constant to ±0.1°C. Ideal for enzyme reactions, inactivation of sera, Rh studies, and cholesterol determinations.

11-715-100228.00

Interchangeable heating
blocks add versatility

Black anodized aluminum alloy blocks for above system. Chemical resistant. With thermometer hole.

Handy Stations

For cleaning eye glasses, magnifiers, other lenses

End problems with smudged and smeared lenses in your lab. Lab-Lens Stations — with dispensers for lens papers and anti-fogging liquid — thoroughly clean dirty optical surfaces of all smears.

Ideal for camera lenses, microscopes, telescopes, or other optical surfaces. Cleans away dirt and grit. Absorbs oil residues and polishes lenses. Even prevents fog build-up.

Easy to use. Just spray lens with anti-fogging liquid. Wipe clean with lens paper. Two stations available.

NOTE: Use only the wet station for cleaning plastic lenses.

LabLens™ Wet Station

With lens paper and liquid cleaner dispensers. Holds 760 LabLens tissues and 1 pt (473ml) bottle of anti-fogging liquid with spray attachment.

Holes for wall mounting. With lock and key. 27Lx20Wx8.6cmH. Without liquid, pump, or tissues.

11-999-2515.75

LabLens Tissues

Heavy-duty, wet-strength. No Lint. Size, 15x13cm.

11-999-27Pk of 760/1.80
Case of 36 pk/61.20

LabLens Liquid, Gal (3.8 liters)

Polyethylene bottle with convenient handle. For refilling pt bottles. Funnel in each case.

11-999-31gal(3.8 liters)/14.50

LabLens Dry Station

Similar to wet station but without liquid dispenser. Holds 1800 LabLens silicone-coated tissue. Dispenses one tissue at a time. Meets NNN-P-40, Type III Fed Spec.

Heavy enameled steel dispenser. 13Lx9Wx8.3cmH. With lock and key. Holes for wall mounting.

11-999-335.25

LabLens Tissues

Silicone treated on both sides. Not recommended for plastic lenses. Size 13x13cm.

11-999-35Pk of 1800/2.65
Case of 18 pk/45.00

BBL Sensi-Disc® System

For susceptibility testing

Convenient Dispensers

12-place dispenser deposits 12 test discs per plate with centers at least 24mm apart. Integral height adjusting ring makes uniform disc pattern possible regardless of agar depth. Plastic dome cover keeps dispenser free of dust during storage.

8-place model dispenses 8 Sensi-Discs on 100mm dishes.

Single-disc dispenser is useful when adding antimicrobial agents to established patterns in routine studies, or when new antimicrobial discs are being studied.

Antibiotic, Antimicrobial Test Discs

BBL® Sensi-Disc agent is high quality absorbent paper impregnated with accurately determined amounts of antibiotic or other chemotherapeutic agents. Discs containing certifiable agents (such as penicillins, streptomycin, chloramphenicol and tetracycline compounds) are submitted to FDA for assay and certification before distribution.

Sensi-Discs clearly marked on both sides with letters and numbers designating agent and concentration.

Available in full range of agents. Also available blank. In cartridges of 50 discs each that fit 8 and 12-place dispensers. In packs of 1 cartridge or 10 cartridges.

Blank Sensi-Test Discs

With high quality absorbent paper. Dia, 6.4mm. 50 discs per vial

BBL® Sensi-Disc® Antimicrobial Discs

For use in
culture media

These Sensi-Discs for depositing on culture media to add antimicrobial agents. Discs valuable for studies of mycobacteria and related organisms. May be added to measured amounts of Middlebrook 7H10 agar in Falcon Type X 4-compartment plates (see p 248).

Select discs, incubate plates, and interpret results according to latest methods recommended by Center for Disease Control, Veterans Administration, state health departments, or other organizations.

In cartridges of 50 discs each. Refrigerate. Store at -20° to +8°C.

BBL® Taxo® Discs**Detect, differentiate, identify microorganisms**

Discs and strips impregnated with various chemical agents. Reactions or responses to agents indicate taxonomy of organisms being studied.

50 discs or strips per vial; 6 vials per package; 10 cartridges per package. Refrigerate. Store at 2°-8°C.

Description	Cat. No./Ea	Cat. No./Pk of 6 Vials	Cat. No./Pk of 10 Cartridges
Taxo Differentiation Discs, Strips			
A Discs, for differentiating Group A Streptococci:			
50 discs/vial; 6 vials/pk	B31040/2.10	B31041/ 7.47	----
50 discs/vial; 10 crt/pk	B31042/2.10	----	B31552/11.86
N Discs, for identifying Neisseria and Pseudomonas	B31044/2.10	B31045/ 7.47	----
Nystatin (Mycostatin® Discs) for inhibiting yeasts			
50 discs/vial; 6 vials/pk	B31548/2.10	B31549/7.47	----
50 discs/crt.; 10 crt/pk	B31550/2.10	----	B31553/11.86
ONPG Discs for detecting lactosefermenters	B31248/7.75	B31249/38.56	----
P Discs, for differentiating Pneumococci:			
50 discs/vial; 6 vials/pk	B31046/2.10	B31047/ 7.47	----
50 discs/crt; 10 crt/pk	B31048/2.10	----	B31554/11.86
X and V Factor Strips	B31104/3.30	B31105/16.94	----
X Factor Strips	B31106/3.30	B31107/16.94	----
V Factor Strips	B31108/3.30	B31109/16.94	----

**Instant alcohol**

WHY risk contamination? Our ready-to-use sterile swabs are yours in pre-sealed foil packets. No need for alcohol dispensers, bottles, bulky packages of balls. Just tear open. Remove lintfree swab saturated with 70% isop-

ropyl. Apply. Patients love 'em. In easy-to-store boxes of 100. Catalog No. 2-665-400. Price: only \$22.50 per case of 2000. We'd call them **dirt-cheap**. But the whole point of the swabs is their **purity**. Right?

BBL Bacteriuria Screening Test Kit

BST Kit provides for quantitative screening of urine culture on media. Indicates total bacterial colony count and number of gram-negative organisms per ml.

Ready-to-use, disposable system. Consists of dual-chambered media holder positioned inside screw-cap vial. Each chamber has 310mm² of surface area. One chamber plated with modified Trypticase® Soy Broth (non-selective general purpose medium) for isolation and enumeration of common

bacteria which may cause bacteriuria. Other chamber plated with modified Levine Eosin Methylene Blue Agar (selective and differential medium) for aiding in detection and enumeration of enteric organisms.

Easy to use. Dip media holder into specimen. Allow excess urine to drain from media surfaces. Incubate. Read results.

Bioware Supplies for Electrophoresis and Immuno-electrophoresis

Cool-Pak® Temperature-Controlled Electrophoretic Cell.

Maintains proper temperature from 5° to 12°C of buffer and support media during electrophoresis. Cell's chilled environment enhances resolution and prevents denaturation of proteins and enzymes. Accommodates agarose gel plastic sheets or cellulose acetate media up to 13x18cm in size.

Operates with or without cooling facilities. For cooling applications, simply insert coolant canister inside chamber drawer to maintain temperatures below 12° for up to 3 to 4 hours. No wicks needed; use for special applications if desired. Observe movement of dye marker through transparent lid. Electrophoresis completed in 15 to 35min depending upon V/cm.

Ordering Information: Molded high-impact, fire-retardant, self-extinguishing plastic cell chamber. Transparent cover with magnetic safety interlock. Automatic shut-off device, standard jacks and plugs, electrode tank with 150-200ml buffer capacity. Use with most variable power supplies without adapters. 24Lx23Wx11cmH. With two Cool-Pak Cartridges.

BW62-535-0-11200.00

Cool-Pak Cartridge

Coolant canister for Cool-Pak Electrophoretic Cell. Maintains buffer and electrophoretic support media at 5° to 12°C for up to 4 hours. No water, pumps, ice, or connections other than power leads are required. Store cartridges at -20°C until ready to use.

BW62-536-0-1112.00

Gel Blade

For inoculating 1 to 2µl specimens on agarose sheets.

BW62-531-0-113.00

Electric Jacks

Electric power supply leads for Cool-Pak Electrophoretic Cell.

BW62-524-0-11Pr/8.00

Fisher Scientific Company

Incubation Chamber

Provides high humidity, room temperature environment for development of immunoprecipitant lines, rings, or arcs. Holds up to fourteen 13x18cm immunoplates.

To insure high humidity, place Petri dish filled with water inside chamber. High humidity decreases chances of agarose dehydration during diffusion phase.

Tightly sealed, molded plastic construction. 20Lx17Wx37cmH. With 2 film supports.

BW62-503-0-11135.00

Well Cutter

Cuts 4mm wells for counter-electrophoresis. Can be coupled to vacuum.

BW62-519-0-1110.00

Film Support

Heavy plastic support for diffusion phase of immuno-electrophoresis.

BW62-533-0-115.00

Immuno-Electric Dryer

Forced hot air oven for drying agarose-coated film and strips at 45° to 50°C. Holds fourteen 13x18cm film hangers or 14 strip hangers.

Simple to use. Turn oven on. Place hangers in grooves inside oven. Leave hangers in oven until dry . . . approximately 30 to 45min. Materials that have not been dehydrated with alcohol will take longer to dry.

Non-corrosive molded plastic construction. 28Lx62Wx27cmH.

BW62-505-0-11275.00

Immuno Hanger

For processing 13x18cm agarose sheets.

BW62-506-0-1120.00

Film Hanger

Holds five 35mm wide agarose strips.

BW62-510-0-1110.00

Immuno-Glo® Dark-Field Illumination Viewer

Provides illumination for photographing unstained immunoprecipitant bands in immuno-electrophoresis, immunoglobulin quantitation, and electroimmunodiffusion.

Easy to use. Switch light on. Place film hanger containing immuno-electrophoretogram into viewer grooves. Center viewer under camera. Focus camera and take Polaroid print of pattern.

Two-part construction with hinges on each side. Top easily removed for maintenance and replacement of fluorescent lights. 28Lx34Wx29cmH.

BW62-504-0-11224.00

Gel Needle

Cuts 1mm serum wells for immuno-electrophoresis. Can be coupled to vacuum.

BW62-530-0-1110.00

Tank

For processing twelve 13x18cm plates. Stainless steel. 15Lx26Wx20cmH. With cover.

BW62-513-0-1142.00

Fisher Scientific Company

Pistolpet™ Pipettor — Squeeze Trigger To Dispense; Release To Refill

MST71-800-085

Gun-shaped pipetting device with 5cm short travel trigger reduces wrist and finger fatigue in repetitive dispensing. Also, contributes to better control . . . accurate to $\pm 0.5\%$ of full scale.

Attaches directly to most commonly used reagent bottles with 38mm standard bores. Eliminates risks of spillage from pouring. Adapter kit permits Pistolpet to be used with containers having 28mm or 33mm standard bores.

High impact plastic housing. Only Teflon® or glass parts come in contact with fluid. Easy to clean; just pipet cleaning solution through tip.

Available in 2 capacities. Both adjustable over entire range.

Capac	Cat. No.	Price

CPK/LDH Isoenzyme Kits

Results in less than one hour

Convenient, easy-to-use kits for hospitals and clinical labs for obtaining proper heart fraction when myocardial infarction is suspected. Kits include isoenzyme columns pre-packed and pre-measured with 5.25ml of buffered sodium chloride (0.1M, pH8) and 90mg of Sephadex® A-50 Resin; buffered sodium chloride reagents with 0.1M and pH8, 0.2M and pH8, and 0.5M and pH7; with or without sample concentrator.

Simple procedure. Pour 1ml of serum sample into isoenzyme column. Add 3 buffered sodium chloride reagents in succession to split sample. Third reagent provides myocardial CPK (MB) and LDH (LDH1, 2). Compare total CPK/LDH with isoenzyme fractions as determined by spectrophotometric analysis. Eliminates electrophoretic analysis.

Pipetter's Paradise

The little **Oxford® pipetting center** below provides the wherewithal for fast, safe, convenient micropipetting. The 9"x11" unit comes complete with instrument rack and 2 trays. Rack holds 6 Oxford Sampler® units. A tray holds a 240-tip layer from 5-layer Organized-Tip Package. Simply remove layer from package, fit against pipetting center, and lower onto tray — it presents all tips to Sampler, ready to use.

Use the center with Model Q Sampler and you can affix tip, transfer sample, and eject tip — **without ever touching tip!** Eliminates cross-contamination, exposure to hazardous materials. Ideal for hepatitis tests, bacteriology, tissue culture, radioimmunoassay, microchemistry, and quality control.

21-24124.00

Additional support trays.

Diagnostic Technology Hematology Controls

Valid for All Instruments

Count-A-Part Controls ideal for verifying accuracy of blood cell counts, hemoglobins, hematocrits. Behave like actual human blood; have single set of assay values valid for manual or automated techniques.

Suspended in non-clotting media; hence, no clogged instruments. 6-week shelf life; less waste due to discarding old material, especially in small-volume labs. Vial screw cap with built-in stopper assures leakproof seal; no evaporation, caking.

Count-A-Part Complete

Unique 4-in-1 Count-A-Part Complete controls for RBC, WBC, Hb, HCT, MCV, MCH, and MCHC determinations available in vials for normal or abnormal levels, and in combination sets of vials.

Size	Cat. No.	Box

Stabilized preparation of lysed erythrocytes, standardized by cyanmethemoglobin method. For hemoglobinometry. 2-yr dating period

Normal Level	5x0.5ml	DT301	13.50
Sub-Normal Level	5x0.5	DT302	13.50
Combination Kit	5x0.5ml vials ea normal and sub-normal levels	DT303	25.00

Cyanmethemoglobin Sets

Count-A-Part Cyanmethemoglobin Reagent

Used in performing hemoglobin determinations by modified Drabkin method. Each vial has enough pre-weighed powder to produce 1 liter of working reagent. 2-yr dating period.

DT401Box of 5 vials/8.00

Count-A-Part Cyanmethemoglobin Standard Sets

Specially prepared, stabilized formulation of lysed human erythrocytes for use in preparation of standard curves and calibration of hemoglobinometers. 1-yr dating period.

For instruments requiring 1:251 and 1:301 dilutions. Set includes two 50ml bottles of approx 80mg% Hb, two 50ml bottles of approx 40mg% Hb, and two 50ml bottles of approx 20mg% Hb.

DT60125.00

For instruments requiring 1:501 dilution. Set includes two 50ml bottles of approx 40mg% Hb, two 50ml bottles of approx 20mg% Hb, two 50ml bottles of approx 15mg% Hb.

DT60225.00

Your Lab Ready for an OSHA Inspector?

Here's a manual that can help!

Fisher Safety Manual . . . 65 pages of useful safety tips.

Covers OSHA requirements, safety equipment, accident prevention, laboratory first aid, fires and fire fighting . . . gives you dozens of references on laboratory safety.

Just check no. 2 on reader service card at end of blue index pages. We'll have a copy on its way by return mail.

General Diagnostics

Clinical Chemistry Test Systems

Product	Description	Quantity	Cat. No.	Box
AccUric®	Colorimetric test system for quantitative determination of uric acid. Employs sodium carbonate and improved phosphotungstate reagent to speed, simplify determinations. Provides increased precision and sensitivity, linearity to 15mg/dl.	100 tests	W36602	30.00
AlbuStrate®	Single-reagent test system for quantitative colorimetric assay of serum albumin. Utilizes bromocresol green dye which binds albumin specifically; does not react with globulins. Albumin measured directly without prior salt fractionation or electrophoretic separation. Method is not temperature sensitive; provides linearity up to 8g/dl. Manual and automated test methods available. Patented.	100ml (100 tests) 250 (250 tests)	W34050 W34051	30.00 60.00
DyAmyl®-L	For quantitative, colorimetric determination of amylase in serum and urine. System consists of stable liquid substrate [dyed amylopectin 3 and precipitant (ethylene glycol monomethyl ether-salt solution)]. Requires no special preparation. Provides accurate, reproducible results. Linear to 550 DyAmyl-L units. Total test time — 25min. Multiple determinations can be performed concurrently and conveniently.	50 tests	W30127	25.00
BilliStrate® — Total & Direct	Stable, quantitative, colorimetric test systems for determining total and direct serum bilirubin. Utilizes improved Jendrassik-Grof method. Reagents interchangeable except for accelerator reagent (Total) and hydroxylamine hydrochloride (Direct)			
	BilliStrate Total	100 tests	W36605	30.00
	BilliStrate Direct	100 tests	W36606	30.00

General Diagnostics Clinical Chemistry Test Systems, Contd.

Product	Description	Quantity	Cat. No.	Box
Gluco Strate	Colorimetric glucose test system for quantitative determination of glucose in serum, plasma, and cerebrospinal fluid. Utilizes hexokinase and glucose-6-phosphate dehydrogenase. Procedure provides linear response up to 50mg/dl; requires only 20 μ l of sample; is highly specific for glucose. Method is rapid and easy to perform, requires only 10min incubation.	100 tests	W36601	28.00
Lac-Dehystrate®	For quantitative colorimetric determinations of lactic dehydrogenase (Lactate \rightarrow Pyruvate). Patented. Manual	100	W35974	61.00
Phosphastrate® Acid	Simple, highly sensitive test system for quantitative colorimetric determination of acid phosphatase in serum or plasma. Utilizes alpha-naphthyl phosphate substrate. Method not dependent on final inorganic phosphate assay; not subject to error due to phosphate or red cells present in samples. Patented.	100	W36150	30.00
Phosphatabs® Acid	Quantitative and semi-quantitative test systems for colorimetric determinations of prostatic acid phosphatase in plasma or serum. Both systems employ alpha-naphthyl phosphate substrate and tetrazotized orthodianisidine color developer.			
	Semi-quantitative , with small test tubes (Teswells®), tube rack, and color comparison chart.	48	W36148	22.00
	Quantitative (Patented) , with standard for Quantitative results.	100	W36110	36.00
Phosphastrate® Acid α-Naphthol Standard	Calibration reference to be used with phosphastrate acid reagents in determinations of serum and plasma acid phosphatase. 1ml vial contains sufficient α -naphthol in human serum base for preparation of a calibration curve. Use with a diluent of 2.5ml having about 7g/dl total protein.	10 vials	W36151	18.00
Phosphastrate Alkaline	Two-component test system or individual reagents using manual or automated methods for quantitative colorimetric determinations of alkaline phosphate in serum and plasma. Simple, rapid, and highly sensitive method employs phenolphthalein monophosphate substrate. Reaction color produced is linear with respect to enzyme concentration and incubation time. Patented.			
	Manual	200 tests	W35950	60.00
	Automated Phosphastrate Alkaline Substrate Concentrate	4x25ml bottles	W35952	108.00
	Phosphastrate Alkaline Color Stabilizer	12 packets (each for 250ml)	W35951	27.00
Phosphastrate Alkaline Phenolphthalein Standard	Calibration reference to be used with Phosphastrate Alkaline reagents in determination of serum alkaline phosphatase. 1.6ml ampule contains solution of phenolphthalein in 50% alcohol. To use, open ampule. Pipet 1.0ml into 50ml volumetric flask. Bring to total volume with distilled water. Mix thoroughly. Prepare calibration curve.	3 ampules	W35956	6.00
Phosphatabs Alkaline	Similar to Phosphatabs Acid but for alkaline phosphate. Employs phenolphthalein phosphate substrate and sodium hydroxide color developer.			
	Semi-quantitative	48 tests	W35920	22.00
	Quantitative (Patented)	100	W35910	36.00

Clinical Chem Test Systems Contd.

Product	Description	Quantity	Cat. No.	Box
TransAc®	Test systems for quantitative colorimetric determinations of serum glutaminoxalacetic transaminase (SGOT). Procedure selectively produces color in proportion to amount of transamination product (oxalacetic acid) formed. Flexible, uncomplicated, rapid method. Patented. Manual			
		100 tests	W33815	34.00
		250	W33821	52.00
BUN-Strate®	Indirect colorimetric test system for quantitative determination of blood urea nitrogen (BUN). Improved Berthelot procedure utilizes enzyme urease to convert urea to ammonia, with subsequent final analysis of ammonium ion. Highly specific and sensitive; linear response up to 80mg/dl.	100	W36801	30.00
Urograph®	Accurate, simple, single-paper test strip system for semi-quantitative determination of urea nitrogen levels in serum and plasma. Requires less than one minute working time per test. Is equally useful for single determinations as well as large routine series of determinations. Prepared by impregnating reagents on chromatography paper in precise proportions. Combines chemical principles of Conway Microdiffusion Method with physical principles of paper chromatography.	100	W30006	23.00
		250	W30004	46.50

Vali-Data Computerized Clinical Quality Control Program

Inexpensive comparison of your lab's performance

Comprehensive statistical computer services specifically designed for the clinical laboratory. Choose from 3 distinctively different quality control programs.

Program "A" offers a total monthly and cumulative picture of your lab's performance in comparison to 25 or more peer labs.

Program "B" offers a total monthly and cumulative picture of your lab's performance in comparison to 8 or more peer labs.

Program "C" offers an individual monthly and cumulative performance summary.

These programs decrease paperwork, save laboratory time, minimize errors, and allow for comparison of test results among peer groups. Performance summarized by lab and by method.

For further information contact your local Fisher representative or write to your local Fisher branch.

General Diagnostics Clinical Chemistry Quality Control Products for Automated, Semi-Automated, and Manual Procedures

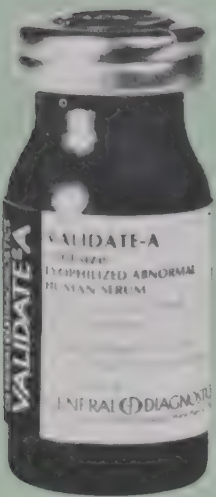

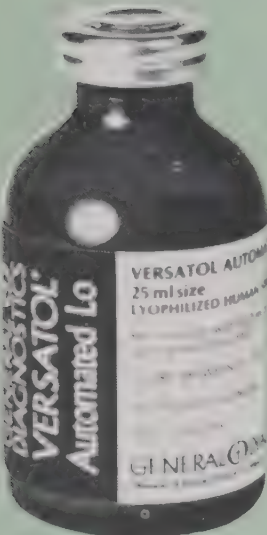

Product	Description	Quantity	Cat. No.	Box
Validate®-EL	Stable, elevated lipid control. Prepared with lipid extracts of human blood and egg yolk added to bovine serum base. Labeled for cholesterol, triglycerides, total lipids, and phospholipids. Methods and values listed on inserts are kept current with the continuous changes in lipid research and are based on determinations performed by specially selected reference laboratories according to rigid specifications of the Warner-Lambert Company.	6x5ml	W30189	24.50

Validate®	Stable normal comprehensive control serum prepared by lyophilizing fresh normal human serum. Assay values for each serum constituent are means of statistically significant values from replicate assays performed by a large network of specially selected reference laboratories under the rigid specifications and control of the Quality Control Department of the Warner-Lambert Company.	6x10	W30185	31.00
		6x5	W30182	16.00

			6x25	W30116 56.50
	Blood G.A.S. (Gas Analyzer System) Control	Ready-to-use control system for pH, PCO ₂ , and PO ₂ analyses. Encompasses 3 clinically significant ranges: Level I has pH and PCO ₂ values representative of metabolic acidosis, while PO ₂ corresponds to oxygen therapy. Level II represents clinically normal pH, PCO ₂ , and PO ₂ . Level III has pH and PCO ₂ representative of metabolic alkalosis, while PO ₂ corresponds to hypoventilation or impaired diffusion. Detect problems such as broken membranes, electrical malfunction, cracked electrodes, and buffer contamination. Store at room temperature. Up to 4-month stability. In convenient trays with one single-dose ampoule of each level. Ten trays per package.		
		30x1.7ml	W30194	55.00

Product	Description	Quantity	Cat. No.	Box
	Versatol Acid-Base	Human control serum for control of pH, CO ₂ and PCO ₂ analyses. When examining acid-base balance, serum provides control for other constituents frequently determined (e.g. lactic acid, urea nitrogen, sodium, and potassium). Three levels simulate patient disturbances in metabolic and respiratory conditions reflecting normal, acidosis, and alkalosis. Provide reliable, simple system for validating blood gas and electrolyte test results. All supplied with diluent.		
	Versatol Acid-Base Normal	6x3ml	W30148	25.00
	Versatol Acid-Base Acidosis	6x3	W30147	25.00
	Versatol Acid-Base Alkalosis	6x3	W30146	25.00
	Versatol Acid-Base Full Range	18x3	W30192	68.70
	Calibrate® (levels 1, 2 and 3)	Reference, prepared from human serum. For preparing calibration curves for manual, semi-automated and automated procedures. 16 serum constituents; each at 3 different levels. Manufactured using exact weighed-in technique.	18x5ml (6 vials each level) 3x5ml (1 vial each level)	50.00 9.50
	Versatol®	Lyophilized, human calibration reference and control serum with normal electrophoretic pattern. Labeled for at least 16 constituents normal for adults. Most constituents for which it is standardized are initially removed (or reduced to an insignificant level) from a human serum pool. Then pure raw materials, containing desired constituents, are added to serum base at precise, weighed-in levels.	10x5ml	W30101 31.00
	Versatol-A	Similar to Versatol (W30101) but with constituents labeled at an abnormal level.	10x5ml	W30103 31.00

General Diagnostics Clinical Chemistry Quality Control Products, Contd.

Product	Description	Quantity	Cat. No.	Box
Versatol®-A Alternate	Similar to Versatol-A (W30103) but with constituent values labeled at abnormal levels significantly different from those of Versatol-A.	10x5ml	W30110	31.00

Versatol Full-Range Quality Control Set	Each package contains six 5ml vials each of Versatol, Versatol-A, and Versatol-A Alternate.	18x5	W30108	50.00
--	---	------	---------------	-------

Versatol-E-N	Human calibration reference and control serum. Normal level. Standardized for 6 serum enzymes ... alkaline phosphatase, prostatic acid phosphatase, amylase, lipase, lactic dehydrogenase, and serum glutamic-oxalacetic transaminase.	10x3	W30141	25.00
---------------------	--	------	---------------	-------

Versatol-E	Similar to Versatol-E-N (W30141) but with constituents labeled at an elevated abnormal level.	10x3	W30140	25.00
-------------------	---	------	---------------	-------

Versatol Pediatric	Human calibration reference and control serum. Standardized at clinically significant pediatric levels for each of 13 constituents, according to weighed-in technique. Bilirubin at abnormal high level for detecting neonatal jaundice. Phenylalanine at abnormal high level for detecting phenylketonuria. Protein-bound iodine elevated; calcium and glucose at abnormally low level.	10x3	W30149	31.00
---------------------------	---	------	---------------	-------

Product	Description	Quantity	Cat. No.	Box
 Serachol®	Lyophilized human control serum standardized for cholesterol (total, free, esters) at abnormal elevated level.	10x5ml	W30175	28.00
 Versatol®-E-N Plus	Comprehensive enzyme controls designed for reference and control in normal range. Provides values for 12 enzymes. In bovine albumin base. Reconstituted, Versatol-E-N Plus is an almost water-clear serum. Reconstituted product stable for 48 hours, even for CPK.	6x3	W30190	20.00
 Versatol-E Plus	Similar to Versatol-E-N Plus (W30190) but has values at least 2-3 times normal.	6x3	W30191	20.00
 Reliatol™ Levels I and II	Lyophilized, assayed serum controls for automated, semi-automated, and manual test systems. Provide complementary values in 2 clinically discrete ranges. Prepared from bovine serum. HAA negative, comes with diluent. Basis of sound quality control program for over 35 constituents.			
	Level I	6x5	W30173	14.00
		6x10	W30174	24.50
	Level II	6x5	W30176	14.00
		6x10	W30177	24.50
 Quality Assurance Serum Levels I and II	Lyophilized unassayed quality control serum provides 2 significant and complementary control levels. These levels test system's capability and clinical significance. Dialysis and filtration virtually eliminate turbidity interference. With diluent.			
	Level I	6x10	W30170	11.50
	Level II	6x10	W30169	11.50
 Quality Control for Urine	Monitor performance of reagent test strips and other tests commonly used in routine urinalysis. Contains known levels of constituents commonly determined in semi-quantitative urinalysis with dip-stick procedures when assessing acid-base balance, carbohydrate metabolism, kidney and liver function, etc. QCU-test system includes 10 disposable test tubes with caps, 37ml diluent and 10 urine control tablets.	10 tests	W30193	9.75

Simplex™	Thromboplastin reagent prepared from fresh brain and lung tissue of rabbits. Contains suitable proportion of calcium and sodium chloride. For accurate prothrombin time (PT) determinations in coagulation testing using manual, mechanical and photo-optical clot detection methods. Rigidly standardized in normal and therapeutic ranges.	10x6-test vials 10x20 10x50	W35114 W35124 W35105	9.00 15.50 32.50

Product	Description	Quantity	Cat. No.	Box
Simplastin-A	Similar to Simplastin but contains optimum quantity of Factor V and fibrinogen. For one-stage prothrombin time (PT) testing of plasmas over 4 hours old, and for the prothrombin-proconvertin (PP) test.	10x20	W35101	21.45
Platelin®	Platelet Factor 3 reagent (partial thromboplastin) containing rabbit brain phospholipids. For coagulation test requiring partial thromboplastin [e.g. partial thromboplastin time (PTT) test and thromboplastin generation test (TGT)].	10x2.5ml vials	W35501	16.00
Platelin Plus Activator	Platelet Factor 3 reagent (partial thromboplastin) containing rabbit brain phospholipids and celite as activator. For determination of activated partial thromboplastin times (APTT). Use of celite yields more reproducible results and shorter times by assuring complete activation of plasmas being tested.	10x2.5	W35503	16.00
Verify® Normal Citrate	Normal human plasma rigidly standardized to contain optimum quantities of clotting factors. For use as a control for patient samples drawn into citrate.	10x0.5ml vials	W34111	11.50
		10x1.0	W34112	16.50
Verify Normal Oxalate	Similar to Verify Normal Citrate but for use as a control for patient plasmas drawn into oxalate.	10x0.5	W34106	11.50
Verify Abnormal Citrate (I & II)	Prothrombin control for monitoring sensitive upper and lower ranges of extended time range. Human plasma, standardized to contain reduced amounts of Factors II, VII, IX, and X to approximate plasmas from patients treated with oral anticoagulants. Package with ten vials — 5 each of Verify I and Verify II.	10x0.5	W34105	14.50
		10x1.0	W34113	21.00
		Verify I only 10x1.0	W34127	21.00
		Verify II only 10x1.0	W34129	21.00
Verify Abnormal Oxalate (I & II)	Similar to Verify Abnormal Citrate (I and II) except for the anticoagulant it is to be used with.	10x0.5	W34104	14.50

General Diagnostics
Coagulation Reagents and Controls, Contd.

Product	Description	Quantity	Cat. No.	Box
Simplastin® Auto- mated	Two-component thromboplastin-calcium reagent system specifically designed for performing Prothrombin Time (PT) determinations with automated and semi-automated coagulation systems. Prepared from rabbit brain and lung tissue. Provides excellent reproducibility. Sensitive to oral anticoagulant therapy and to individual factor deficiencies. With diluent.	5x60 test vials	W35106	20.00
		6x25	W35108	11.00
Calcium Chloride 0.025M	Designed for use with Platelin® Plus Activator and Automated APTT. 0.025 Molar has been determined as the optimum concentration for use with PTT and APTT procedures.	10x10ml vials	W35514	12.50
Automated APTT	A Platelet Factor 3 Reagent plus Particulate Activator. Partial thromboplastin prepared from rabbit brain tissue. Sensitive to low levels of heparin and to individual coagulation factor deficiencies. Excellent buffering capacity. Provides reproducible Activated Partial Thromboplastin Times (APTT) with automated and semi-automated coagulation systems as well as with other conventional methods for determining APTT.	10x30 test vials	W35513	19.50
Fibrinogen	Prepared from bovine plasma. Free of prothrombin complex, anticoagulants, and accessory factors. For diagnostic tests, e.g. prothrombin consumption test, 2-stage prothrombin time test for prothrombin activity. When reconstituted with purified water, each vial contains 300mg% fibrinogen in physiological saline.	3x2.0ml	W34501	7.00

General Diagnostics
PathoTec® Microbiological Test Systems/Sure-Sep®

PathoTec®
Rapid ID
System

Biochemical test strips identify 95% of enterobacteriaceae found in laboratory, within 4 hours after primary isolation. System of 10 individual components set up in less than 5 minutes.

Paper strips impregnated with reagents that detect specific enzymes or metabolic end products characteristic of certain microorganisms. Reagents include substrate and indicator system that gives readily identifiable color change.

Precise quantities of substrate and detection reagents applied to each test strip so that incompatible materials are separated. Results in increased accuracy and extended stability. One biochemical test on each strip insures no interference between individual reactions and provides flexibility in design of identification procedures.

System contains 25 tests each of 10 individual components listed. 250 tests per box. W34186.....Box/44.00

General Medical Systems

Diagnostic Test Kits for Iso-Computron Systems

GM-T3

Thyro-Quant T₃ Tests

For thyroid function *in vitro* evaluation by radioassay. Indirectly determines number of unoccupied binding sites of T₄ binding serum protein. Results expressed as T₃ binding index.

Only 0.1ml of serum needed. Testing time: 35min. Patient serum and reference standard run simultaneously. Coefficient of variation: less than 5%.

Particularly useful where thyroids are producing normal quantities of hormone, yet have abnormally increased or decreased serum levels of total thyroxine.

Test pack for 20 tests consists of 20 radioassay vials, 20 anionic membrane strips, 2.0ml of human serum control standard, forceps, instruction manual.

Sure-Sep® Serum Plasma Separator

Disposable device for rapid, convenient, and effective separation of serum or plasma from blood sample. Produces serum or plasma sufficiently clean for laboratory testing in only one centrifugation. Reduces evaporation during centrifugation by providing a cover for collection tube.

Sure-Sep forms durable, physical barrier between serum or plasma and cellular components of the collected specimen. Eliminates need for transfer of sample to a separate container — thus no need to relabel.

Ordering Information: Fits 13 and 16mm dia collection tubes. 100 units per box.

W33706.....Box/9.75

Thyro-Quant T₄ Tests

For total serum thyroxine determinations. Procedure based on principles of competitive protein-binding analysis (modified Murphy-Pattee test).

Involves fewer steps than most other T₄ procedures. Safer: no pipeting of radioactive material required. Greater diagnostic accuracy due to stable reference serum standard containing known quantities of thyroxine. Results not affected by non-hormonal iodine-containing compounds, iodinated

X-ray contrast media, or mercury-containing compounds.

Only 0.5ml of serum required per test. Testing time: 45 min. Patient sample and reference serum run simultaneously.

Test pack for 20 tests consists of 20 radioassay vials, 20 anionic membrane strips, two 2.8ml vials of reference serum standard, 1 vial of thyroxine standard, 1 bottle of extraction alcohol, forceps, graph paper, instruction manual.

Gugol Stains/Staining Sets for Hematology

GG 8930

WBC Differential Staining

Gugol Blue are strips of paper impregnated with dye. Place strip in catalyst for 2 or 3 seconds. Place wet strip over thin blood smear on slide for 30 to 60 seconds. Remove strip from slide. Swirl slide in buffer and dry. Eliminates messy Wright staining. For 1000 tests.

GG 8930Pk/42.00

Gugol Blue Multi Stain

Same as GG 8930 but with rack and jars. 60 slides stained in 5 minutes. For 1200 tests.

GG 3121Pk/56.00

For other staining sets and supplies, see p 609

Determine TB Bacteria

Acid Fast are dry, disposable staining strips. Immerse red Acid Fast strip in 20% methyl alcohol solution. Place strip on heat-fixed Acid-Fast smear for 3 minutes. Remove strip and rinse slide. Immerse decolorizing/counter staining strip (blue or green) in methyl alcohol solution. Place strip on smear and allow to stand for two minutes. Remove strip and rinse slide. Let slide air dry. Examine slide under microscope. For 210 tests.

Counter Staining Strip	Cat. No.	Pk
Green	GG 8931G	42.00
Blue	GG 8931B	42.00

Detect General Bacteria

Gugol Gram Stain is used to determine gram + or gram - organisms. Immerse purple strip into 20% methanol alcohol solution. Place wet strip on slide for one minute. Peel strip from slide and rinse. Immerse white strip into 1% HCl solution. Place wet strip on same slide for two minutes. Peel strip from slide and rinse. Dip slide in acetone alcohol until purple stain stops running from slide. Rinse slide thoroughly under distilled water. Immerse red strip into distilled water. Place wet strip on smear for 10 seconds. Peel strip from slide and rinse. Allow to dry. View under microscope. Gram + organism will be stained blue; gram - organism, red.

GG 8934Pk/52.00 (500 tests)

GG 8935Pk/17.50 (100 tests)

Oxicult Reagent Dropper

For identifying *Neisseria* colonies

HP-100

Consists of hermetically sealed glass ampule of oxidase reagent inside a plastic dropper tube. Useful for identifying various gram-negative bacilli. Simply hold dropper upright. Squeeze to break ampule.

Ordering Information: Contains enough reagent for up to 10 colony identifications. Pre-mixed, convenient, easy-to-use. Stable for 1 yr if kept at room temperature and protected from light.

HP-100Case of 72/19.50

Handy Manomark® Pens

Write on paper, plastic, glass, metal, wood, cloth

Fine-line felt-tip pens with extra tip conveniently stored on top of pen. Patented precision seal valve guarantees continuous flow of ink. Ink fully resistant to acids, alkalies, alcohol. Package of 12 color-coded pens with assorted colored inks.

13-385Pk of 12/14.40

Peristaltic Pump

Dispenses a Few Drops or Large Volumes with $\pm 5\%$ Accuracy

13-875-115

Veristaltic® Dispenser Pump fills test tubes, dishes, flasks at high speeds without fear of contamination. Dispenses 1.5 to 250ml per dispensing cycle from 0 to 6 sec.

Pump utilizes squeezing action of rollers on flexible tubing to create flow. Fluid never comes in contact with any part of pump — except inert tubing. Tubing is easily removed for cleaning, sterilizing, or autoclaving.

Complete with peristaltic pumping head, timer, manual dispensing arm, stand, glass and plastic tips. All controls located on front panel. Uses $\frac{1}{8}$ to $\frac{5}{16}$ " ID tubing with $\frac{1}{16}$ " thick walls.

For 15V 60Hz.
13-875-115425.00

For 220V 50Hz.
MST 72-600-220520.00

Reagents and Reagent Sets for Hycel Instrumentation

All Hycel reagents and reagent sets are conveniently available from your local Fisher branch. Check pp 736-737 for dispensers and supplies too.

Alkaline Phosphatase

Alkaline phosphatase set. With one ea HY209, 210, 211 reagents.

HY20845.10

Reagents	Capac	Cat. No.	Ea
Alkaline Phosphatase Substrate	580ml	HY209	27.00
Alkali Reagent	250	HY210	10.80
Thymolphthalein Standard	55	HY211	9.00

Serum Bilirubin

Direct and total serum bilirubin set.

Simple colorimetric method for determining bilirubin directly on serum. With one ea HY291A, 292A, 293A reagents.

HY290A39.60

Reagents	Capac	Cat. No.	Ea
Sulfanilic Acid Reagent	580ml	HY291A	22.32
Nitrite Sucrose Reagent	240	HY292A	10.80
Methanol Reagent	580	HY293A	10.80

Cholesterol

Reagents	Capac	Cat. No.	Ea
Stable cholesterol reagent, Liebermann-Burchard, can be used directly on serum, extracts of serum, or saponified extracts of serum	580ml	HY181	27.00

Support Rack
for 50 Pipets

Sturdy molded polypropylene rack holds pipets in vertical position for safe, orderly, and space-saving storage. Rack rows in 5x10 arrangement. Holes in top and middle deck, 16mm dia. Bottom holes tapered from 16 to 1mm dia. Lower deck high enough above base to prevent pipet tips from contacting table beneath. Over-all dimensions, 8 3/8 L x 4 1/2 W x 8 3/4 H. Autoclavable at 121°C. With hand grips on both ends.
BAR-H-18953.....11.50

Hycel Serum Chemistries

Acid Phosphatase

For determining acid phosphatase activity in serum by colorimetry. Phosphates are liberated by enzymatic hydrolysis of β -glycerophosphate with subsequent meas-

urement of phosphate ion. Measurement employs a modified Fiske-Subbarow reaction. With one ea HY236-238.
HY235.....38.98

Replacement Reagents	Capac	Cat. No.	Ea
Acid Phosphatase Color Reagent	580ml	HY237A	21.60
Acid Phosphatase Substrate	240	HY236	17.84
Phosphatase Standard	55	HY238	8.89

CPK

Set for determining CPK activity in serum. Determination time: single sample, 38 minutes; 20 samples plus standards, 62 minutes.

utes. With one ea HY901-905.

HY90057.00

Total Serum Calcium

A highly specific, simple, colorimetric cuvet method for total serum calcium. The method takes only five minutes to perform using two reagents directly on 0.1ml of serum in the cuvet. Calcium is released from protein in acid solution and complexed by cresolphthalein complexone. Addition of 3.0ml of a base reagent results in formation of a purple color complex. The reagents are available for Hycel automation and are also adaptable to continuous flow systems.

An alternate procedure requires 0.05ml serum. No. of tests/set is 80-160 for 6 or 3ml total volume. Reagents are stable for 1 year at room temperature. Can be used for measurement of urine calcium. Readings are made at 540nm. Determination time: 20 samples plus standards — 36 minutes.

Includes one ea: HY971, HY973MX; 2 ea HY972A.

HY97041.29

Calcium Base Reagent	580ml	HY973MX	Ea/10.80

Chloride

A rapid, direct method for colorimetric assay of chloride in serum; 3.0ml of a single working reagent is added to only 0.05ml of serum. Color development is immediate and stable for 24 hours. The test is based on the liberation of thiocyanate from mercuric thiocyanate by chloride to form a colored complex. The method is adaptable to Hycel automation and

to selected continuous flow systems.

Readings are made at 505nm. Stability is 1 year at room temperature. Recommend HY975 Electrolyte Standard, for standardization (p 736).

Includes one ea HY233, HY263. For 100 determinations.

HY26421.60

Replacement Reagents	Capac	Cat. No.	Ea

Hycel Serum Chemistries Contd.

Creatinine

A simple, colorimetric method for direct and filtrate determinations of creatinine in serum or urine. The reaction complexes creatinine and picrate ion in alkaline solution to produce red creatinine picrate. In the direct serum method, 0.2ml of serum is placed in boiling water for five minutes and a heat clot formed. Three ml of deionized water is added, followed after a ten-minute interval by 3.0ml of alkaline picrate. The color reaction is developed for 15 minutes and read at 520nm.

Total determination time is 30 minutes. The method is adaptable to Hycel automated analyzers.

Measurement of urine creatinine can be made. The standard set is a lyophilized preparation with values equivalent to 0, 4, 8, and 12mg/dl creatinine.

Determination time: for 20 samples direct — 50 minutes; for filtrate — 45 minutes. Includes one ea HY941, HY943.

HY940.....45.13

Total Lipids

Provides direct quantitative determination of total lipids in only 0.1ml of serum. The test uses the sulfophosphovanillin reaction and is specific for carbon-carbon double bonds characteristic of cholesterol, cholesterol esters, triglycerides, phospholipids, and free fatty acids. Total reaction time is 60 minutes,

and the color developed is stable at room temperature for 30 minutes. The Total Lipid Test is packaged in 100 determination sets, making it economically advantageous for laboratory use. Shelf life: 6 months at room temperature.

HY957.....18.00

Beta-Lipoprotein

The Hycel Beta-Lipoprotein Test is a rapid, one-step turbidimetric screening test for detection of beta-lipoproteins in serum. A single reagent is added to the test sample directly in the cuvet and the reaction occurs almost instantaneously. No centrifugation or other time-consuming steps required. The test is based upon selective precipitation of beta and pre-beta lipoprotein by heparin in the presence of calcium ion. Particulate matter is finely and evenly distributed upon addition of the reagent, and the test can be read immediately at 650nm. The Hycel 50-determination package provides the laboratory with both cost savings and convenience. Stability is 2 years at room temperature.

HY95827.00

Phospholipids

Simple, rapid colorimetric procedure specific for phospholipids in serum. Method employs stable reagents and requires only 20 minutes for a single determination. Phospholipids are precipitated with trichloroacetic acid, and non-lipid phosphates are removed by simple centrifugation. The precipitate is then digested at 235°C with perchloric acid and ammonium metavanadate. Addition of ammonium molybdate to the digest forms a color complex which is stable at room temperature for several days. The stable reagents are provided in a 100-test set. Reagents are stable for 2 years at room temperature.

HY94842.88

Serum Iron and Iron Binding

Reagent provides simple, colorimetric method for determining serum iron and iron binding capacity. Serum iron dissociates from protein, is reduced to ferrous state with

hydroxylamine hydrochloride, forms bathophenanthroline color complex. With one ea HY295-299.

Triglycerides

A completely enzymatic, rapid colorimetric method for the direct quantitative determination of triglycerides in serum. Test may be performed in single cuvet on as little as 0.05ml of serum. Only three reagent additions required. Single sample may be read in 20 minutes; no extraction, no pre-treatment, and no flammable reagents are required. The method involves direct, rapid enzymatic hydrolysis at 37°C. Prior removal of phospholipids is not required since they are not

hydrolyzed. The test measures glycerol directly produced from triglycerides, and the final product absorbs in the visible range at 505nm. All reagents have a 1-year shelf life refrigerated.
HY961 includes 2 ea: HY962, HY963, HY946, HY960.
HY964 includes 1 ea: HY962, HY963.

Cyanmethemoglobin Reagents

Rapid quantitative measurement of total hemoglobin. The reagent is available in liquid form ready for use or as a pre-weighed powder which has only to be dissolved in distilled water for use. Normal erythrocytes are instantly lysed by the efficient stromolytic action of the reagent. Studies have shown that certain abnormal erythrocytes are resistant to

lysing in the reagent. These cells, associated with certain hemolytic anemias and traits, enable the reagent to provide a screening test for detection of these red cell abnormalities.
Check p 735 for cyanmethemoglobin standards and controls.

Protein-Bound Iodine (PBI) Systems

Hycel reagents and equipment available for determining protein-bound iodine in serum by 3 methods: cuvet, dry ash, and acid distillation (macro and semi-micro). They can also be used in determining total iodine, inorganic iodine, and butanol-extractable iodine.

Cuvet Set. Provides simple, single test tube procedure. PBI is released by perchloric destruction of protein, then oxidized to iodate. Ceric ammonium sulfate is reduced by arsenious acid which is catalyzed by iodine.

With one ea HY216-220 reagents; pk of 14-385-900E cuvetts; HY446 triple dispenser clamp; two HY551 dispensers; one HY571 dispenser; and HY451 thermal block.

Standards and Controls for Hycel Systems

Cyanmethemoglobin Standard

HY117

All lots are identical in assay value (80.0 mg%). The high assay value covers newborn and polycythemia ranges, eliminating errors caused by unwarranted extension of lower assay standard curves. A complete five-point standard curve may be prepared from one vial thus preventing nonlinear errors caused by variations in instrument linearity. The standard is prepared with the exclusive Hycel formula for stable cyanmethemoglobin reagent, in accordance with the specifications proposed by the International Committee for Standardization in Hematology. The standard is packed in wide-mouth, single-use vials (6x17ml). Plastic snap-caps provide safe, easy opening and direct pipeting.

HY117.....Pk/17.60

Hemoglobin Control

HY119

Hycel Hemoglobin Controls are solutions of hemoglobin prepared from lysed human erythrocytes. They are intended for *in vitro* diagnostic use for monitoring the accuracy of Hycel Cyanmethemoglobin test results. Three concentrations of hemoglobin are provided: low (approximately 8g/dl), normal (approximately 12g/dl), and high (approximately 16g/dl). Assay values are specific for each lot of Hemoglobin Controls. Hycel Hemoglobin Controls are treated in exactly the same manner as unknown blood samples, and thus provide good quality control over the range of commonly encountered levels of hemoglobin. 24x0.5ml.

HY119.....Pk/34.56

Human Protein Standard

HY974

Prepared from purified human serum albumin (HSA) for use in the determination of Total Protein and Albumin. Protein concentration is determined by nitrogen analysis. Concentration is approximately 8g/dl; exact assayed value is supplied for each lot number with each order. As packaged, the HSA preparation is stable for two years at room temperature. It is in liquid form, 6x3.0ml per box, and ready for use directly from the bottle with no pre-treatment.

HY974.....52.44

Normal and Abnormal Control Serum

These control sera are lyophilized preparations of pooled HAA negative, adult human serum. Assayed by Hycel manual serum chemistry methods. Verified on the Hycel 17 and Mark X Discretionary Automated Chemical Analyzers. Assay values from albumin, globulin, total protein, alkaline phosphatase,

CPK, LDH, SGOT, SGPT, calcium, chloride, phosphorus, potassium, sodium, cholesterol, triglycerides, bilirubin, creatinine, glucose, PBI, urea nitrogen, and uric acid are provided. Both normal and abnormal control sera are available in selected lots, packaged in 10.0ml and 25.0ml sizes. Unopened vials are stable for one year from date of manufacture when stored under refrigeration. After reconstitution, stability is the same as for fresh serum.

Serum	Capac	Cat. No.	Pk
Normal Control Serum	10x25ml	HY931	96.68
Abnormal Control Serum	10x25	HY932	102.56
Normal Control Serum	12x10	HY933	70.48
Abnormal Control Serum	12x10	HY934	71.40

Standards and Controls For Hycel Systems Contd.

Electrolyte Standard

Hycel Electrolyte Standard for use in quantitative determination of sodium, potassium, lithium, and chloride, is packaged in sets containing two ampules each of "low", "middle" and "high" range standards. Concentrations of constituents are specific for each lot number and are supplied with each order. Typical values are:

Values	Low Range	Middle Range	High Range
Sodium (mEq/liter)	120	140	160
Potassium (mEq/liter)	2.5	5.0	7.5
Lithium (mEq/liter)	0.5	1.0	1.5
Chloride (mEq/liter)	80	100	120

These standards may be used directly from the ampule and require no pre-treatment. They are stable for one year when stored unopened and at room temperature. 6x2ml. **HY975**.....9.60

Lipid Standard Sera

Used for calibration of Hycel tests for triglycerides, total lipids, phospholipids, beta-lipoproteins and cholesterol in serum. They are prepared from HAA-negative human sera and are available in both normal and elevated lipid levels. Assay values are provided with each package. These sera contain assay values for all lipid constituents which can be tested by Hycel methods, thus providing a complete lipid reference standard pack.

Sera	Capac	Cat. No.	Pk
Normal	6x2.0ml	HY936	21.60
Abnormal	6x2.0	HY937	21.60
Normal/Abnormal (3 each)	6x2.0	HY935	21.60

Cork and Rubber Stopper Gauge

Determine cork and rubber stopper size quickly with 15cm plastic (blue vinyl) gauge. Place gauge into mouth of flask, bottle, or tube; read size directly on appropriate scale.

11-284.....Ea/1.30
Pk of 10 10.90

Urine Control

Lyophilized pooled normal human urine intended as a quality control material to monitor the accuracy of the results obtained in measuring various urine constituents. It is assayed against primary standards by Hycel methods for 17-ketosteroids, 17-ketogenic steroids, 17-hydroxycorticosteroids, 3-methoxy-4hydroxy mandelic acid, 5-hydroxyindole acetic acid, creatinine, urea nitrogen, calcium, uric acid, and phosphorus. The assay values and allowable limits are specified with each lot. Shelf life: 2 years, refrigerated. 4x25ml. **HY987**.....24.00

HY987

Hycel Reagent Dispensers

Variety of dispensers in volume capacities especially for Hycel reagent sets.

Description	Capac	Cat. No.	Ea
Clear	1.0ml	HY550	72.00
Clear	2.0	HY551	72.00
Clear	5.0	HY556	72.00
Clear	6.0	HY557	72.00
Clear w/delivery collar	5.0	HY561	72.00
Amber	1.0	HY570	72.00
Amber	2.0	HY571	72.00
Amber	5.0	HY574	72.00
Amber	6.0	HY575	72.00
Amber w/delivery collar	3.0	HY576	72.00

Dispenser Clamps

Clamp. Holds one or two Hycel reagent dispensers. Fits standard support stands. **HY445A**.....17.28

Triple Clamp

Holds three reagent dispensers. **HY446**.....25.92

Hyclette Dispensers

Dispense reagent volumes from 0 to 6.0ml in easily selected 0.1ml increments. Fits 592ml, 946ml, or 1.9 liter reagent containers.

HY700.....Ea 48.00
HY710.....Pk of 3 116.40

Hycel Equipment and Supplies

HY451 with HY452

Thermal Block. Heats 36 cuvetts, 19x150mm, at 100°C or 230°C. Temperatures are factory-set, accurate to $\pm 5^\circ\text{C}$. Controls include 3-way switch and signal lights. 600-watt circular heater is embedded in base. Heavily insulated, machined aluminum block is encased in stainless steel. Heat-resistant handles. 115V 60Hz.
HY451.....400.00

Portable Fume Hood. Vapo-Hood for PBI determinations. Fan motor. 115V 60Hz.
HY452.....300.00

Portable Vapo-Vent fume hood. For laboratories without a fume hood for safe ether evaporation. Capac, twelve 125ml flasks. 400 watt heater, enclosed in watertight casting, and blower system. 115V 60Hz.
HY421.....400.00

Graph Paper. Optical density vs concentration. 100 sheets per package.
HY449Pk/10.80

Snap-Cap. 25mm. For 25x150mm test tubes.
HY261Pk of 25/2.40

Multi-Test Kits Quantitate G, A, and M Immunoglobulins

IC83111

IC83110

Simple and specific radial immunodiffusion tests for identification and quantitation of plasma proteins in plasma and other body fluids. Choice of testing method — Fahey's kinetic method where ring diameter is read at specific time, or Mancini's endpoint method which allows reaction to go to completion.

Kits have 6 ready-to-use radial immunodiffusion plates for IgG, IgA, and IgM immunoglobulins. Each plate contains specific heavy chain antibody incorporated into agarose gel. Plates have 6 or 12 wells.

Pipet reference sera and patient sera into wells of plate. Select incubation temperature and time period for desired test method. For kinetic method, 20hr. For endpoint method, 18 to 72hr depending on immunoglobulin being tested. Read precipitin rings to nearest 0.1mm with viewer. With readings, plot calibration curve. Concentration of the unknown samples are determined using the calibration curve established by the reference standards.

Ordering Information: Complete kit with two plates each for IgG, IgA, and IgM; three 0.25ml vials of reference serum; precision capillaries, graduated from 1 to 5 microliters and wire plunger. Plates packaged in aluminum-Mylar bags. Remain stable for 12 months when stored in aluminum bags between 2° to 8°C.
IC83111(36 determinations)/43.00
IC83110(72 determinations)/82.00

Furnaces. See p 389.
Cuvets. See p 1101.

Radial Immunodiffusion Kits for Specific Proteins

IC83511

Individual kits for serum protein determinations, by either Fahey's kinetic or Mancini's endpoint method.

Each kit has 6-well radial immunodiffusion plates containing specific heavy chain antibodies in agarose gel and 3 vials of reference serum, and capillaries.

For 36 Determinations:

Type	Cat. No.	Ea
Alpha-1-Antitrypsin (AAT TEST™)	IC83142	59.00
Haptoglobin	IC83145	59.00
IgD	IC83119	42.00
Transferrin	IC83147	53.00
C3	IC83161	42.00
C4	IC83163	50.00
IgG	IC83113	42.00
IgG Low Level	IC83123	42.00
IgG Ultra Low Level	IC83133	42.00
IgA	IC83115	42.00
IgA Low Level	IC83125	42.00
IgA Ultra Low Level	IC83135	42.00
IgM	IC83117	42.00
IgM Low Level	IC83127	42.00
IgG Globulin and Albumin (3 plates each)	IC83155	65.00

For 72 Determinations:

Following kits contain 6 plates, 12 wells each, reference sera and capillaries.

IgG	IC83112	81.00
IgA	IC83114	81.00
IgM	IC83116	81.00

For 120 Determinations:

Following kits contain ten plates only, 12 wells each.

IgG	IC83171	108.00
IgA	IC83173	108.00
IgM	IC83175	108.00

Immunology Control Serum

Human control serum assayed for IgG, A, M, D, C3, C4, haptoglobin, transferrin, albumin, AAT, total proteins, Alpha-1, Alpha-2, Beta, and Gamma Globulin assays in mg/dl and IU/ml where applicable. 3x0.5ml vials
IC8351117.00

Kova-System™

For standardizing urinalysis procedures

Kova-System provides necessary equipment for standardizing urinalysis with regard to consistent volumes of sample and sediment for microscopic analysis. Enables labs to perform reliable urine analyses during patient's treatment.

System consists of: Kova-slides, Kova-tubes, Kova-kaps, Kova-petters, Kova-trol I, and Kova-trol II control sera.

System is fast and reliable. First, determine color, turbidity, and specific gravity of urine specimen. Perform chemical tests (pH, protein, ketones, blood, bilirubin, urobilinogen, and sugar) using reagent dipsticks. Decant

12ml of specimen into Kova-tube. Centrifuge at 1500rpm for 5 min. Place Kova-petter into tube to decant and discard supernatant; 1.0ml of urine and sediment is retained. Add one drop of Kova-stain to remaining 1.0ml of urine and sediment in Kova-tube. Mix well with Kova-petter. Squeeze Kova-petter to draw specimen into pipet. Transfer one drop of specimen to area adjacent to each chamber in Kova-slide. Specimen drawn under cover examination area by capillary action. Allow to set for one minute to permit settling. Place Kova-slide on microscope stage. Use 10X eyepiece with 10X objective to read low power fields and with 43X objective to read high power fields. Record results.

1C87-135 1C87-137 1C87-139

System Components

Kova-tube

Clear plastic disposable collection and centrifuge tube with conical bottom. Graduated at 1.0, 3.0, 6.0, 9.0, and 12.0ml. Non-sterile.

IC87137Box of 500/22.50

Kova-kap

Provides tight closure for Kova-tubes when storing or transferring urine from collection station to lab. Plastic, disposable, non-sterile.

IC87139Box of 500/5.00

Kova-petter

Disposable plastic transfer pipet with built-in plastic disc. For transferring specimen to Kova-slide for microscopic analysis and mixing specimen in Kova-tube. Disc holds back 1ml of urine and sediment in Kova-tube for standardization of volume.

IC87135Box of 500/24.50

Kova-trol

Freeze-dried human urine control for physical, chemical, and microscopic analysis of urine. Excellent for teaching and routine QC purposes. Daily Quality Control Chart in each package.

Quantitative values for specific gravity, osmolality, pH, protein, ketones, hemo-

globin, occult blood, urobilinogen, bilirubin, nitrite, RBC's, and stimulated WBC's. Qualitative values for color and turbidity.

Stable for 5 days after reconstitution when stored between 2° to 8°C. Diluent provided.

Values	Cat. No.	Box of
Kova-trol I (Normal to High)	IC87121	2/15.00
Kova-trol I (Normal to High)	IC87120	5/28.00
Kova-trol II (Low to Normal)	IC87123	2/15.00
Kova-trol II (Low to Normal)	IC87124	5/28.00

Kova-stain

Stabilized Sternheimer-Malbin stain facilitates differentiation of cellular elements of urinary sediment found by microscopic examination. Eliminates precipitate formation and need for filtration.

Stable at room temperature. In 25ml plastic dropper vial.

IC87115Ea/6.00

IC87116Box of 3/15.00

Kova-slide

Disposable plastic slides, each with four separate, distinct covered examination chambers. Uniform depth and area permits standardized reading of Microscopics. Clean, clear, and concise readings. 100 slides per box. 10 boxes per case.

IC87211Case/139.00

Trichina Test Detects Trichinella Antigen Antibodies

Rapid screening qualitative test for detecting antibodies to *Trichinella spiralis* antigen in human and animal serum. Results yield 96.5% agreement with complement fixation tests.

Trichina reagent formulated with stabilized erythrocytes and polystyrene latex particles. Provides large indicator surface for demonstrating positive reactions. Eliminates difficul-

ties of resuspension. Stable for one year from date of manufacture without loss of activity due to hemolysis.

Kit includes 0.5ml stabilized trichina reagent, 0.3ml positive control, 0.25ml negative control, capillaries, and slide. Enough reagents for 12 determinations.

IC8027122.00

RAF Rheuma·fac™ Latex Test Simplifies Detection of Rheumatoid Arthritis Factor

Rapid latex agglutination slide test for qualitative and/or quantitative determination of rheumatoid factors in serum. Clearly legible agglutination results virtually eliminate misinterpretation. Results are 95% accurate with low level of false positives.

Easy to use. Add 0.05ml sample to 1.0ml glycine saline buffer for 1:21 dilution. Place one drop of diluted sample, negative control, and positive control on separate areas of slide. Add one drop of latex reagent to negative control, positive control, and diluted sample. Mix each pool with separate applicator stick. Tilt slide back and forth for 1 to 2 min. Observe for agglutination.

50-test kit: With 2.5ml latex reagent, 1.0ml positive human control, 1.0ml negative human control, 50ml glycine saline buffer, capillaries, applicator stick, slide. Reference Standard available separately.

IC8270116.50

120-test kit: With 6.0ml latex reagent, 2.0ml positive human control, 2.0ml negative human control, 100ml glycine saline buffer, capillaries, applicator sticks, and slide. Reference Standard available separately for quantitation.

IC8270226.50

RAF Reference Standard. For establishing unit value rather than titer for quantitative determination of patient sample using RAF Rheuma·fac™ kits. Unit value assigned based on CDC Provisional Reference Preparation and WHO Standard. Enough standard for 20 determinations.

IC8271420.00

IM MONO·Tek™ Test

**For qualitative/quantitative
determination of
infectious mononucleosis**

Test kit provides reagents and controls for detecting Heterophile antibodies associated with infectious mononucleosis. By either rapid qualitative slide tests or quantitative slide test method using serially diluted specimens.

Results show 98% correlation with positive specimens from Davidson differential testing. With 0.4% rate of false positive reactions.

MONO·Tek™ stabilized reagent formu-

lated with horse erythrocytes and polystyrene latex particles. Provides easy-to-read agglutination endpoints. No interference from normal Forssman or serum sickness antibodies.

Kit includes 2.5ml stabilized reagent, 1.0ml positive control, 1.0ml negative control, capillaries, applicator sticks, and slide. For 50 determinations. Stable for one year.

IC8023122.00

Tri-G Test System Simplifies Manual/Automated Triglyceride Testing

MD515

Includes Tri-G premeasured extraction tubes and kit of stable ready-to-use Tri-G reagents. Full extraction takes only 60 sec. Final results in less than 30 min with less than 10 min of actual working time.

Much easier than classical procedures. No reagent measuring, diluting, refrigerating, or centrifuging. No need for constant temperature or stopwatch readings.

Simple colorimetric procedure. Add serum to extraction tube. Mix on vortex mixer for 15 sec. Allow phases to separate for 60 sec. Transfer 0.2ml of nonane to cuvet. Add reagents. Incubate. Read results from spectrophotometer.

Tri-G Extraction Tubes. Each tube contains 2ml of nonane and 4.5ml of isopropanol and H₂SO₄. For 100 tests.

MD513Box of 100 tubes/37.00

Tri-G Reagent Kit. Contains 400ml transesterifying reagent, 20ml oxidizing reagent, 1.5ml part 1 color reagent (acetyl acetone), 150ml part 2 color reagent (2M ammonium acetate buffer), 7.5ml triolein standard, 10ml isopropanol diluent. For 100 tests.

MD515Ea/38.00

12 RIA Kits Offer Accuracy Plus Economy

MV500

Each provides all the necessary supplies for running accurate, convenient RIA assays.

Each kit contains: (1) dry and lyophilized reagents; (2) standards calculated for 3 or 4 complete standard lines; (3) reference controls for quality control and checking between-assay reproducibility;

and (4) suitable graph sheets for calculation of results.

Kits are shipped at ambient temperature. After reconstitution, reagents must be refrigerated at 4°C for short term storage or frozen at -20°C for longer periods of time.

Description	Label	Size	Cat. No.	Kit

When ordering, please include your AEC or agreement state license number.

Diagnostic Screening Tests

SikleScrene™ Detects Sick Cell Anemia

MD917

Simple 4-step SikleScrene™ test complete in less than 3 min. Positive, negative readings easy to interpret. Takes micro samples of capillary or anticoagulated whole blood.

SikleScrene test based on turbidity reaction: deoxygenated form of sickle cell hemoglobin, unlike normal hemoglobin, is insoluble in concentrated salt solutions.

Kit supplied with reagents and materials for 100 tests: 4 capsules

activator reagent, ready-to-use buffer solution, plastic screw cap bottle for mixing activated test solution. No weighing or pipetting. Each capsule makes 25ml test solution.

No refrigeration required. Unactivated solution components can be stored for at least 2 years at room temperature. Prepared test solution remains stable for 1 month when refrigerated at 3°-8°C.

MD91721.00

Rapid-Screne™ Detects G-6PD Deficiency

MD918

Single bottle of Rapid-Screne™ reagent is sufficient for 100 determinations of glucose-6-phosphate dehydrogenase deficiency. Ready-to-use. No mixing. No refrigeration. Rapid-Screne can be stored at room temperature for up to 2 years.

Simple, fast method uses finger puncture or venous blood. Normal cells take up methylene blue rapidly, removing dye from sus-

pension medium, G-6PD deficient cells take up dye at markedly impaired rate. Thus, lingering blue-green color indicates positive test.

Rapid-Screne can be run concurrently with MD917 SikleScrene procedure. Interpreted in approx 30 min.

Kit for 100 tests. With instructions.

MD91821.00

VMA Screne™

Detects Urinary Vanillyl Mandelic Acid Levels

MD815

A simple, rapid screening test to determine normal and abnormal levels of urinary vanillyl mandelic acid. Also useful in confirming results of quantitative catecholamine assays.

Enough reagents for 100 determinations. Powdered reagents must be reconstituted with acidified distilled water. Reconstituted reagents are stable for 6 months if refrigerated at 2° to 10°C and kept tightly capped.

Add reagents to test tube. Mix well. Add 0.5ml of urine. Allow tube to stand (30 sec to 1 min). Use color card to compare color of solution in tube with normal and abnormal colors shown on card.

With 0.03g para-nitroaniline powder, 1g sodium nitrite powder, 30ml potassium carbonate solution, and color card for reading results.

MD81531.50

Organon Pregnosticon® Pregnancy Tests

Accuspheres® Test Kits

Two-hour *in vitro* pregnancy test employing urine. Sensitive to Human Chorionic Gonadotropin (HCG) concentrations as low as 0.6IU/ml. Exact sensitivity factor (between 0.6-0.9IU HCG/ml) is labeled on each kit.

Ordering Information: Contains all reagents necessary to perform qualitative tests or to quantitatively determine HCG titers. Each tube contains one freeze dried Accusphere of anti-HCG serum (rabbit) and one freeze dried Accusphere of HCG-coated erythrocytes (sheep). Reagents stable for 1 year at 2-8°C.

25-Test Kit: With 25 tubes, 3 capsules urine diluent, dispenser containing 2ml buffer concentrate, 1 vial positive urine control, 1 vial negative urine control, and directions.

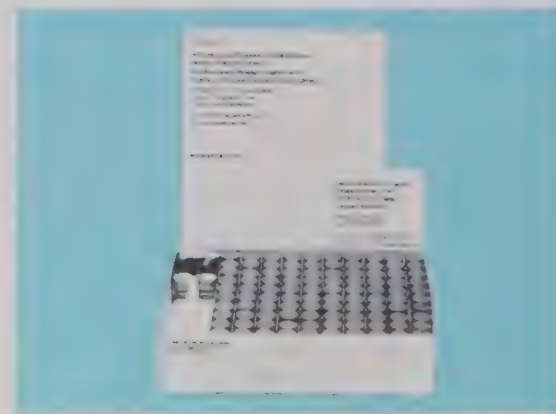

OR136P48.80

100-Test Kit: With 100 tubes, 6 capsules urine diluent, 3 dispensers containing 2ml buffer concentrate, 2 vials positive urine control, 2 vials negative urine control, and directions.

OR136R146.00

300-Test Kit: With 300 tubes, 9 capsules urine diluent, 7 dispensers containing 2ml buffer concentrate, 3 vials positive urine control, 3 vials negative urine control, and directions for use.

OR136GR330.00

OR136R

Accusphere Testrac®. Clear plastic rack for use with Accusphere kits.

OR13691.00

Dri-Dot® Test Kits

OR134R, P

Rapid slide test employing urine for the determination of pregnancy. Sensitive to Human Chorionic Gonadotropin (HCG) concentrations of 1-2 IU/ml.

Ordering Information: Contains all reagents necessary to perform the test. Each disposable paper slide contains one drop each of anti-HCG serum (rabbit) and HCG-coated latex, dried, so slide needs no refrigeration. Stable for 2 years at room temperature.

15-Test Kit: With 15 slides, 15 Dispensstirs®, dropper vial for water, instructions.

OR134W19.95

25-Test Kit: With 25 slides, 25 Dispensstirs®, dropper vial for water, 1 vial positive urine control, 1 vial negative urine control instructions.

OR134P32.50

100-Test Kit: With 100 slides, 100 Dispensstirs®, dropper vial for water, 1 vial positive urine control, 1 vial negative urine control, instructions.

OR134R120.00

Slide Holder. Clear plastic holder that holds 6 slides. For use in both the Pregnosticon and Monosticon Dri-Dot tests.

OR13491.00

Slide Test

OR132F

A rapid slide test employing urine for the determination of pregnancy. Sensitive to Human Chorionic Gonadotropin (HCG) concentrations of 1-2IU/ml.

Ordering Information: Contains all reagents necessary to perform the test. Reagents stable for 1 year at 2-8°C.

10-Test Kit: With 1 vial 0.3ml anti-HCG serum (rabbit), 1 vial 0.3ml HCG-coated latex suspension, 1 vial positive urine control, 1 vial negative urine control, Dispensstirs®, glass slide, and directions.

OR132S13.50

50-Test Kit: With 1 vial 1.5ml anti-HCG serum (rabbit), 1 vial 1.5ml HCG-coated latex suspension, 1 vial positive urine control, 1 vial negative urine control, Dispensstirs®, glass slide, and directions.

OR132F50.00

Triglycerides that don't try your patience

FIRST: Tri-G™, ingenious test system with 15-second triglyceride extractions. Just add serum and mix. No reagent measuring, diluting, refrigerating, centrifuging. **Genuine time-saver** for manual and automated systems, colorimetric and fluouometric procedures. No glycerol, phospholipid, glucose aldehyde interference. Excellent reproducibility. Box of 100: catalog no. MD513 and \$37. Reagents for 100 tests: MD515 and \$38.

(Contd. on next page)

Organon Luteonosticon® Diagnostic Test

Tracks ovarian function patterns

Semi-quantitative hemagglutination-inhibition test for luteinizing hormone (LH) in urine. Simplifies prompt detection of LH peak, which acts as advance signal for beginning of woman's fertile period. Results can be made available to physician within 24hr.

Use with sequential urine specimens. Increases chances of detecting LH peak due to reflection of LH activity over entire time period covered by urine collection. Eliminates need for venipuncture. Also useful for "stat" applications.

Ordering Information: With enough reagents and materials for 6 tests. Kit includes anti-HCG serum, erythrocytes coated with HCG, buffer diluent concentrate, absorbent, filter paper, and tube holders with settling tubes. Reagents stable for 18 months at 2° to 8°C.

OR142E72.00

Test Rack. For use with Luteonosticon Kit. Holds six 16x100mm test tubes.

OR14292.00

OR142E

Organon Rheumanosticon® Reagents

One-Minute Slide Test

OR151F

For the detection of rheumatoid factor in either diluted whole blood or serum. Fingertip test suitable.

Ordering Information: Contains all necessary reagents to perform test: dispensers with buffer (5ml ea); 5ml latex reagent, in dispenser; 1.5ml negative control serum, in dispenser; 1.5ml positive control serum, in dispenser. Also, with: lancets, capillary tubes, polypropylene stirrers, glass slide, and package insert. Reagents stable for 1 year at 2° to 8°C
